Figure 5 of the original paper contains errors [1]. However, the issue has no direct consequence on the manuscript, since the discussion and conclusions were made according to the corrected figure, which is shown below:

Figure 5. Wilcoxon signed-rank test *p*-values that show significant differences (i.e., from 0 to 0.05) between control and non-control SampEn features in the optimization dataset. Hyperparameters were fixed to their optimal values. Note that *p*-values were adjusted using the Benjamini–Hochberg False Discovery Rate (FDR) step-up procedure.
