

Supplementary Material

Table S1. pKa values of key residues in the active site of sEH and Ser105Asp CALB as computed with PROPKA program, compared with their standard values in solution.

	Residue	pKa in Enzyme	Standard pKa
sEH	Asp 333	10.31	3.80
	Asp 495	9.08	3.80
	His 523	1.23	6.50
	Tyr 465	18.12	10.00
	Tyr 381	14.82	10.00
Ser105Asp CALB	Asp 105	11.41	3.80
	His 224	5.19	6.50
	Asp 187	2.80	3.80

Table S2. Important distances for nucleophilic attack of water to C1 of DPPO(1) catalyzed by sEH. Values are given in Å.

Distances	RC	TS1	I1	TS2	PC
H δ^{His523} –N δ^{His523}	1.01	1.01	1.04(1.03)	1.02	1.01
