

# Supplementary Materials: Synthesis, Characterization, and Retinol Stabilization of Fatty Amide- $\beta$ -cyclodextrin Conjugates

Hwanhee Kim, Hu Yiluo, Daham Jeong, Bong-Hyun Jun, Eunae Cho and Seunho Jung

**Figure S1.** DLS profiles. (a) all-trans-retinol/S- $\beta$ -CD nano-vesicles; (b) all-trans-retinol/O- $\beta$ -CD nano-vesicles. TEM images. (c) all-trans-retinol/S- $\beta$ -CD nano-vesicles (scale bar = 200 nm); (d) all-trans-retinol/O- $\beta$ -CD nano-vesicles (scale bar = 200 nm).

**Figure S2.** Particle size distributions. (a) S- $\beta$ -CD. (b) O- $\beta$ -CD. For these histograms, a total of 726 (S- $\beta$ -CD) and 766 (O- $\beta$ -CD) nano-vesicles from representative TEM images (Figure 5d,e) were analyzed.
