a Order of elution is given on apolar column (Rtx-1). Bold types refer to main compounds.

b Retention indices of literature on the apolar column (IRIa).

c Retention indices on the apolar Rtx-1 column (RIa).

d Retention indices on the polar Rtx-Wax column (RIP).

e EC/CO: *Eryngium campestre* Collective oil. Quantification was carried out using RFs relative to tridecane as internal standard. %: Normalized Percentages are given on the apolar column except for components with identical RIa (percentages are given on the polar column), tr = trace (<0.05%).

f RI: Retention Indices; MS: Mass Spectrometry in electronic impact mode. Ref : comparison with literature data. All compounds were identified by comparing their EI-MS and retention indices with references compiled in the in-house library.
