45

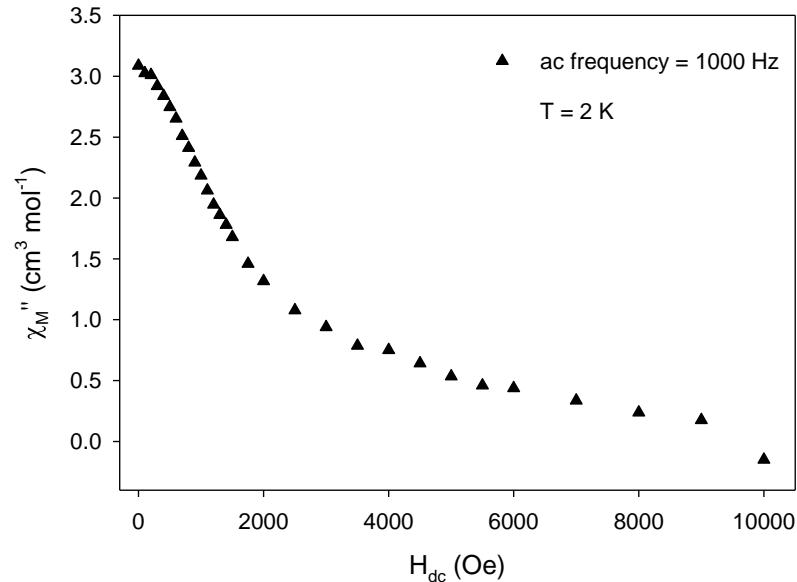

46 **Figure S1.** A small portion of the crystal packing of complex **1**·5MeOH·MeCN, emphasizing with a space-  
 47 filling model the  $\text{NO}_3^-$  counterions and the lattice solvate molecules that occupy the voids between the  $\{\text{Dy}_7\}$   
 48 clusters. H atoms are omitted for clarity.

49

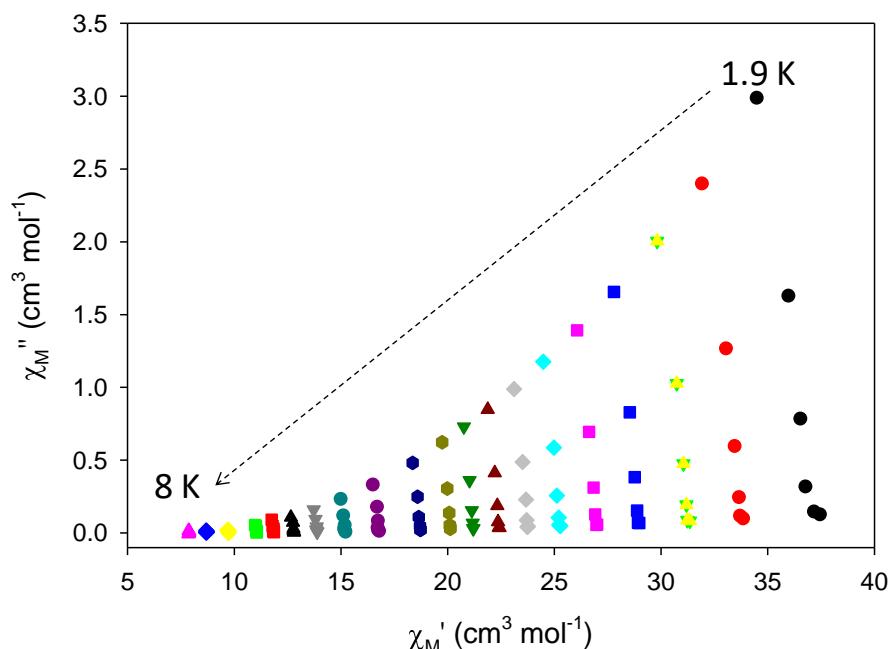

50 **Figure S2.** Plot of reduced magnetization ( $M/N\mu_B$ ) vs  $H/T$  for complex **1** at different fields and temperatures.  
 51 The solid lines are guides for the eye only.

52

53

54 **Figure S3.** Field ( $H$ ) dependence of the out-of-phase ( $\chi_M''$ ) ac signals for complex **1**, measured at 2.0 K under  
55 an ac field of 3.0 G oscillating at a frequency of 1000 Hz.

56

57 **Figure S4.** Cole-Cole plots for **1** obtained using the ac susceptibility data at zero applied dc field.
