

Supplementary Materials

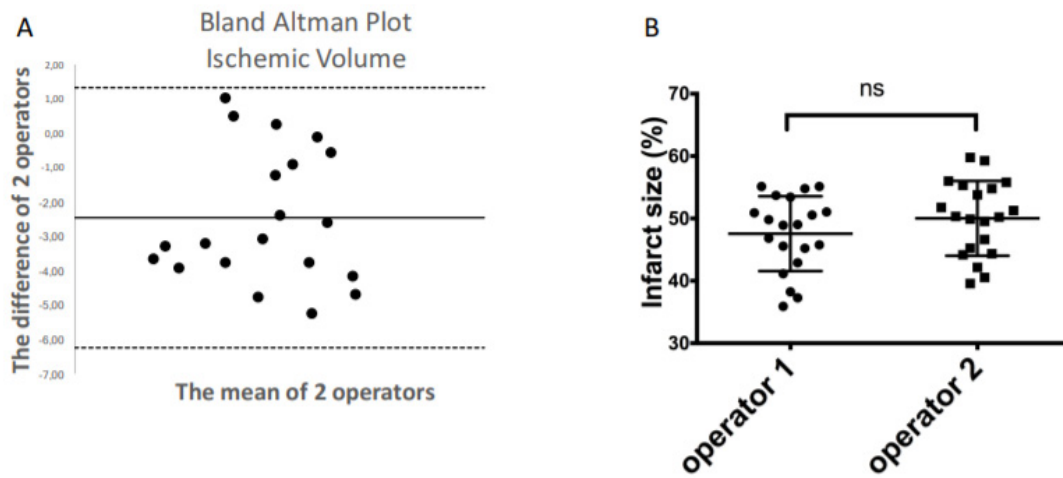

Figure S1. (A) Bland Altman Plot: the bias of measurement of the 2 operators was -2.46% . Upper limit of agreement (LOA): 1.33% . Lower LOA: -6.25% . There was a good correlation between the 2 operators for the analysis of the infarct volume. (B) Comparison of infarct size according to the assessment of the two operators. There was no statistical difference between the 2 operators regarding the assessment of infarct size. ($47.56 \pm 1.34\%$ vs $50.02 \pm 1.3\%$ $p = 0.20$). Data are represented by means \pm SD.
