1. Purity of compound 1

A promising nature-inspired AF compound, a triazolyl glycosylated chalcone (compound 1) was obtained by click chemistry according to our previously described synthesis [1]. Its purity was evaluated by a high-performance liquid chromatography method coupled to an ultraviolet detector (HPLC-UV) (Figure S1).

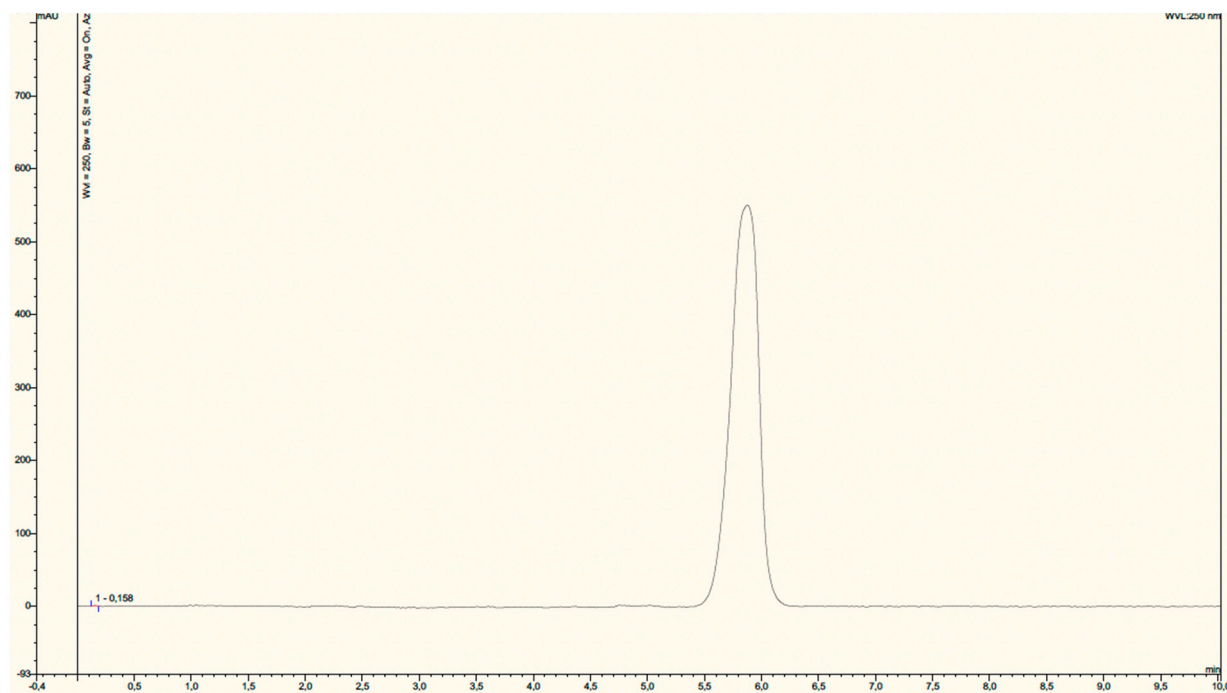

Figure S1. Representative chromatograms of pure compound 1 (200 μ M) dissolved in MeOH with a chromatographic signal at 5.9 min at 250 nm when a mobile phase containing water/acetonitrile (30:70 (v/v)) acidified with acetic acid (pH 2.5) was used.

2. Lipidomics results

Table S1. Lipid standards used, mass-to-charge ratios (m/z 's), retention time (RT) of internal standards. The total carbon number on the acyl chains and the degree of unsaturation of the fatty acyl chains in the lipid species are listed, i.e. 16:0 corresponds to 16 carbons and 0 double bonds.

Table S2. Protein normalization using Bradford protein assay. Cell extracts were reconstituted so that each sample was normalized to a concentration relative to the replicate with the lowest protein content. Due to cell toxicity, there was lower protein content in the Econeal[®] treated samples. To account for this, aliquots of each control group was diluted to normalize protein content in the controls to the Econeal[®] treated samples. Protein normalization for Compound 1 and Econeal[®] with their respective controls are seen here.

Table S4. Lipid species, and mass-to-charge ratios (m/z 's) in each sample. Fold change was determined as [Abundance compound] / [Abundance Control] for each lipid species. The total carbon number on the acyl chains and the degree of unsaturation of the fatty acyl chains in the lipid species are listed, i.e. 16:0 corresponds to 16 carbons and 0 double bonds.

Table S5. MS/MS analysis of PCs and SMs most abundant lipid species and respective most common *m/z* fragments in order of intensity TThe totaltotal [2-4]. The total carbon number on the acyl chains and the degree of unsaturation of the fatty acyl chains in the lipid species are listed, i.e. 16:0 corresponds to 16 carbons and 0 double bonds.
