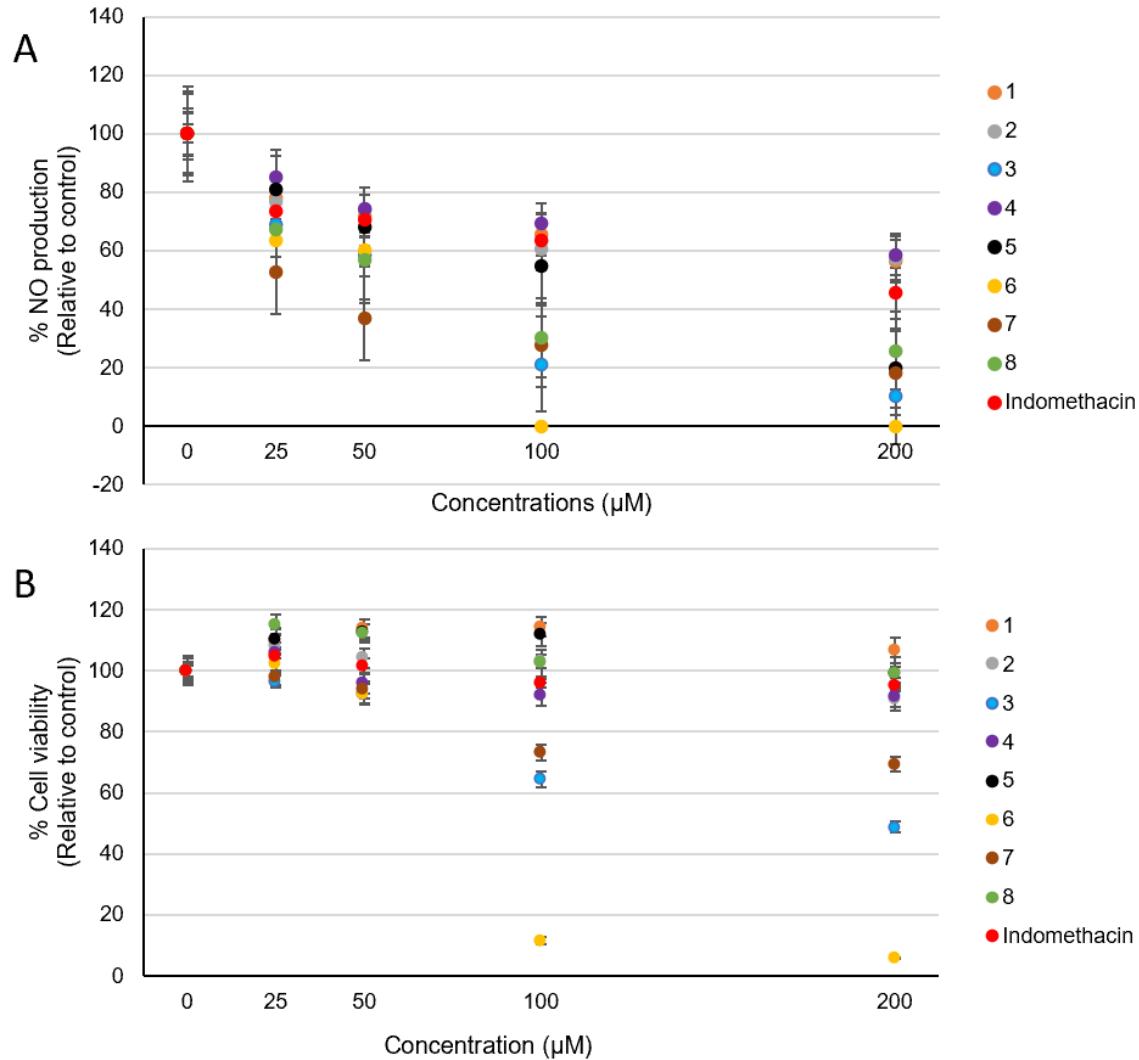

Figure S97. Effects of compounds isolated from *M. siamensis* roots against LPS-induced nitric oxide production in RAW 264.7 cells. (A) Nitric oxide production, and (B) cell viability were measured using Griess reagent kit and MTT assay ($n = 3$), respectively. Cells were treated with compounds at the indicated concentration for 24 h before exposure to 100 ng/mL LPS. Indomethacin was used as a positive control.

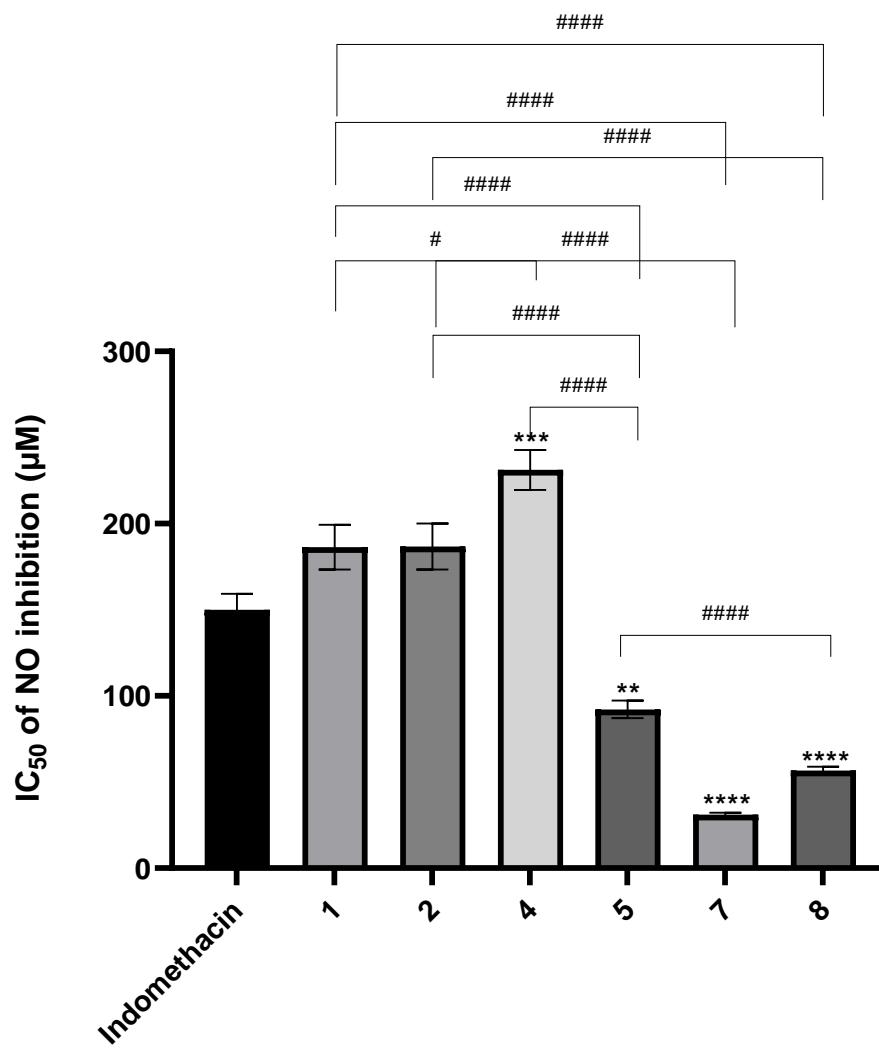

Figure S98. The IC_{50} values of compound isolated from *M. siamensis* roots against LPS-induced nitric oxide production in RAW 264.7 cells. The differences between means of the individual groups were analyzed using one-way analysis of variance (ANOVA) via GraphPad Prism 9.3.1 software (San Diego, CA, USA). ** $P < 0.005$, *** $p < 0.001$, **** $p < 0.0001$ versus Indomethacin. # $P < 0.05$, ##### $p < 0.0001$ between group
