

Supplementary Figure S1. C₃₀ reversed-phase chromatograms of carotenoids and carotenoid esters identified from papaya (*Carica papaya* L. cv. Sweet Mary) in soybean oil pulp a) control and b) run 9 (60% / 10 min/ 20% EtOH) extracts and in peel c) control and d) run 14 (60% / 60 min/ 5% EtOH) extracts; also, in sunflower oil pulp e) control and f) run 9 extracts and in peel g) control and h) run 14 extracts. Peak identities in Table 1.

Supplementary Figure S2. Correlation analysis using the regression coefficient (r^2) between total carotenoids content ($\mu\text{g carotenoids/g vegetable oil}$) and color determination (ΔE) in a) soybean oil and b) sunflower oil pulp extracts and c) soybean oil and d) sunflower oil peel extracts. Letter "C" refers to control and treated samples correspond to the combinations of the variables in the CCD listed in Table 2.

Supplementary Figure S3. Calibration curves of carotenoids standards.

Table S1. Carotenoid extraction yields¹ obtained from papaya (*Carica papaya* L. cv. Sweet Mary) pulp tissue applying UAE using soybean oil and ethanol as green extraction solvent.

¹ Carotenoid quantification is accomplished by HPLC-DAD-MS/MS. The numbers correspond to run number listed in the Table 2. Letter "C" refers to control. All results are specified as the mean of two independent determinations ± standard deviation. Results with different alphabets in the same row are significantly different (p < 0.05) from each other. Retinol activity equivalents are calculated according to guidelines of the United States Institute of Medicine of Medicine [41].

Table S2. Carotenoid extraction yields¹ obtained from papaya (*Carica papaya* L. cv. Sweet Mary) pulp tissue applying UAE using sunflower oil and ethanol as green extraction solvent.

¹ Carotenoid quantification is accomplished by HPLC-DAD-MS/MS. The numbers correspond to run number listed in the Table 2. Letter "C" refers to control. All results are specified as the mean of two independent determinations ± standard deviation. Results with different alphabets in the same row are significantly different (p < 0.05) from each other. Retinol activity equivalents (RAE) are calculated (μg carotenoids/100 g fresh weight) according to guidelines of the United States Institute of Medicine [41].

Table S4. Carotenoid extraction yields¹ obtained from papaya (*Carica papaya* L. cv. Sweet Mary) peel tissue applying UAE using sunflower oil and ethanol as green extraction solvent..

Table S5. Physical and physical-chemical characteristics of papaya (*Carica papaya* L. cv. Sweet Mary).

Characteristic	Value ¹
Total weight of whole fruit (g)	1128.9 ± 165.6
Apical calibre (cm)	20.9 ± 0.6
Equatorial calibre (cm)	9.5 ± 0.2
Titratable acidity (g citric acid/100 g fresh weight)	0.12 ± 0.00
pH	5.2 ± 0.1
Soluble solids (°Brix at 25 °C)	10.2 ± 0.3
Moisture content (% wet basis)	84.9 ± 1.7
Pulp color parameters	
L*	62.4 ± 10.0
a*	22.4 ± 7.1
b*	26.8 ± 5.1
Peel color parameters	
L*	52.6 ± 5.4
a*	13.0 ± 1.2
b*	21.4 ± 5.1

¹Values are the mean of three independent determinations ±standard deviation.
