

Supporting Information

NMR. In Figure S1 were reported the ^1H -NMR spectra of Tyramine and 3-APBA. The peaks related to the aromatic protons of 3-APBA were identified in a range between $\delta=7$ -7,4 ppm [1] while the aromatic protons in orto position respect to the hydroxyl group peaks of Tyramine were visible $\delta=6,8$ and the protons in meta position at $\delta=7,1$ ppm [2]. Moreover, the protons of $-\text{CH}_2$ chain of Tyramine are visible between $\delta=2,7$ -3,0 ppm.
