Note: The underlined parts are mutant nucleotides.

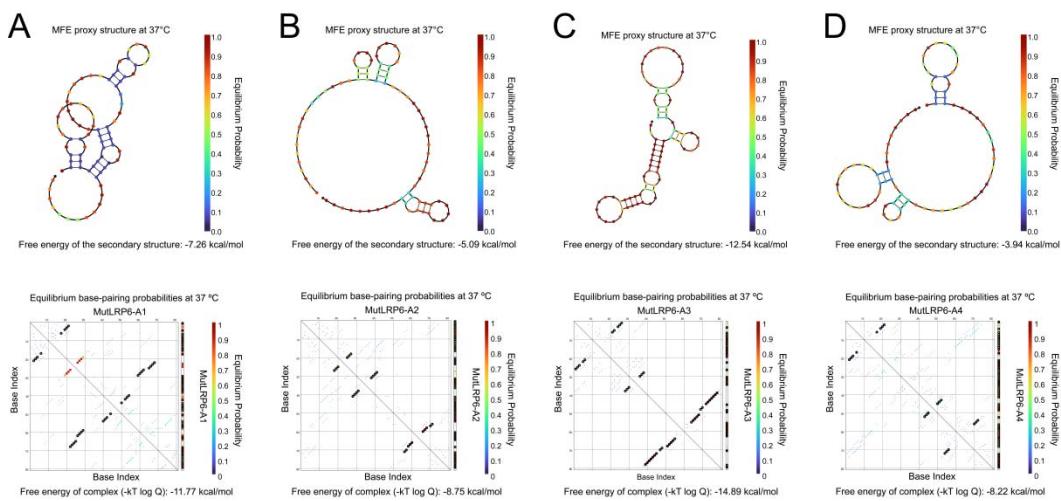

Figure S1. Secondary structure prediction of mutant candidate aptamers. (A–D) The secondary structures of MutLRP6-A1~MutLRP6-A4 were predicted by the NUPACK software.

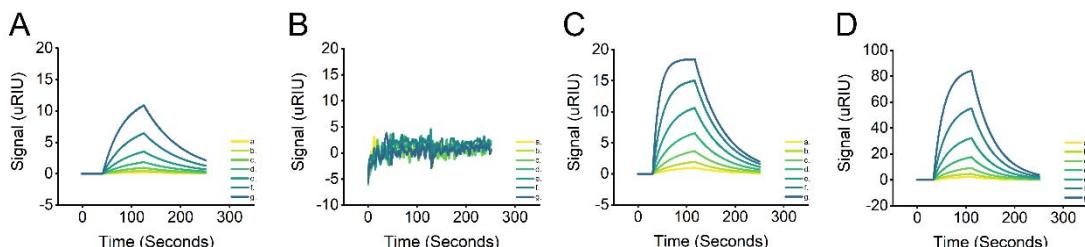

Figure S2. SPR characterizes mutant candidate aptamers' affinity and specificity. (A–D) respectively showed the SPR response spectrums of the binding of MutLRP6-A1~MutLRP6-A4 to LRP6.

Table S2. The binding kinetic parameters of mutant candidate aptamers and LPR6 were determined via SPR.

Name	B _{max} ([Signal (uRIU)])	k _a (1/(M · s))	k _d (1/s)	K _D (mol/L)	U-value: k _a /k _d (%)
MutLRP6-A1	26.8	1.13×10^4	1.29×10^2	1.13×10^6	9.9
MutLRP6-A2	-	-	-	-	-
MutLRP6-A3	23.43	6.21×10^4	1.66×10^2	2.68×10^7	6.2
MutLRP6-A4	159.22	2.60×10^4	2.20×10^2	8.47×10^7	3.4

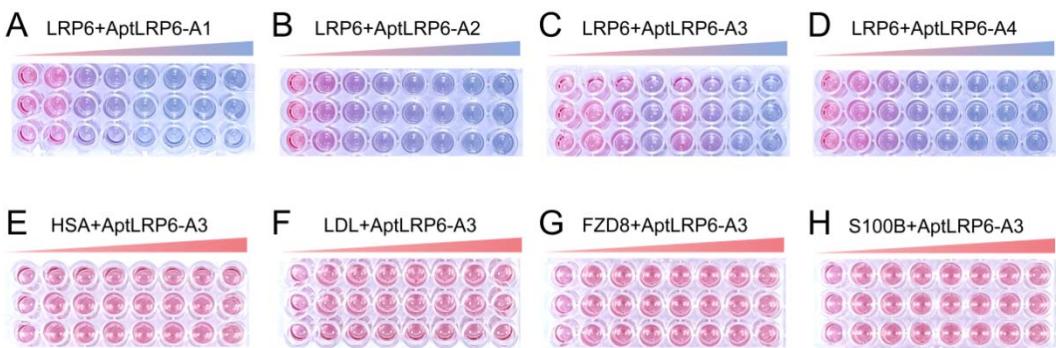

Figure S3. The affinities of candidate aptamers were verified using the gold nanoparticles (AuNPs) colorimetric method. **(A–D)** Color change of AuNPs solution after co-incubation of candidate aptamers AptLRP6-A1~AptLRP6-A4 with LRP6 protein, respectively. With the increase in the candidate aptamer concentration, the color of the AuNPs solution gradually changed from burgundy to blue. **(E–H)** Color change of AuNPs solution after co-incubation of candidate aptamer AptLRP6-A3 with control proteins HSA, LDL, FZD8, and S100B, respectively.

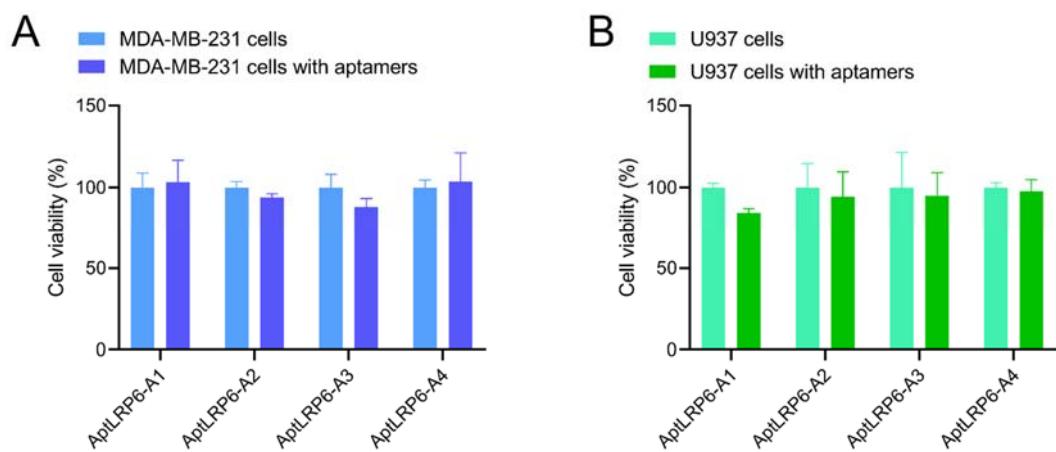

Figure S4. Effect of four candidate aptamers on cell growth. **(A)** Cell viability of 1 $\mu\text{mol/L}$ candidate aptamers co-incubated with MDA-MB-231 cells for 24 h; **(B)** Cell viability of 1 $\mu\text{mol/L}$ candidate aptamers co-incubated with U937 cells for 24 h.
