Invitation: High Quality Papers with Extensive Literature Review and Full Experimental Details

[Derek J. McPhee](#) and [Shu-Kun Lin](#)

Received: 29 December 2000 / Published: 2 January 2000

We would like to encourage authors to contribute full papers describing their detailed research results for publication in *Molecules* (ISSN 1420-3049) at the <http://www.mdpi.org/molecules/> website.

Because it is an online journal completely free to readers, papers published in *Molecules* receive very high publicity. As the first fully electronic journal of Synthetic Organic Chemistry, papers published in *Molecules* are fully and immediately indexed and abstracted by the leading indexing and abstracting services, including Chemical Abstracts; CAPLUS; Science Citation Index Expanded; SciSearch, Research Alert; Chemistry Citation Index and Current Contents. We strive to maintain a very fast editorial procedure and accepted papers are published immediately.

We ask authors to present a comprehensive literature review of their research topic in an Introduction section and to publish as much as possible the full experimental details, particularly synthetic procedures, not only for high-yield examples but also for any low-yield examples, as well as the structures, not only of target products but also those of any isolated and characterized by-products and intermediates, and all the available spectroscopic and other characterization information (see <http://www.mdpi.org/molecules/edito96.htm> for the reasons [1]). In short, we encourage authors to submit long or very long papers.
