

# Supplementary Information

**Figure S1.** Transcriptional responses of FDKs and NHEKs to IFN- $\gamma$ . FDKs derived from AD and from Non-AD, and two different lots of NHEKs were treated with IFN- $\gamma$  (50 ng/mL) and subjected to time-course analysis: 0, 6, 12, 24 h. The expression of each gene of 152 genes showing periodic patterns in response to IFN- $\gamma$  was visualized as the tree after hierarchical clustering (Distance; pearson uncentered, Linkage; complete).
