

## Supplementary Information

**Figure S1.** Schematic representation of the human cytochrome P450 1A1 (*CYP1A1*) 5' regulatory region. Triangles show the location of xenobiotic response element (XRE) sequences in the promoter region. The transcription start site of *CYP1A1* is represented as a bent arrow. The locations of the promoter regions analyzed by bisulfite sequencing (BIS 1 and BIS 2) and chromatin accessibility (CA1 and CA2) are indicated.
