

Supplementary Materials: Overexpression of Transforming Acidic Coiled Coil-Containing Protein 3 Reflects Malignant Characteristics and Poor Prognosis of Glioma

Ying Sun, Yu Tian, Guang-Zhi Wang, Shi-Hong Zhao, Bo Han, Yong-Li Li and Chuan-Lu Jiang

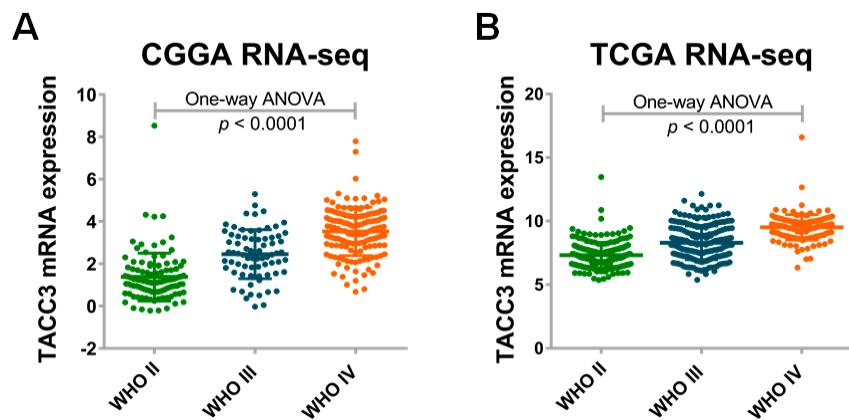

Figure S1. TACC3 expression in CGGA and TCGA RNA sequencing data. (A,B) TACC3 was upregulated along with WHO grade significantly (one-way ANOVA, $p < 0.0001$, respectively).

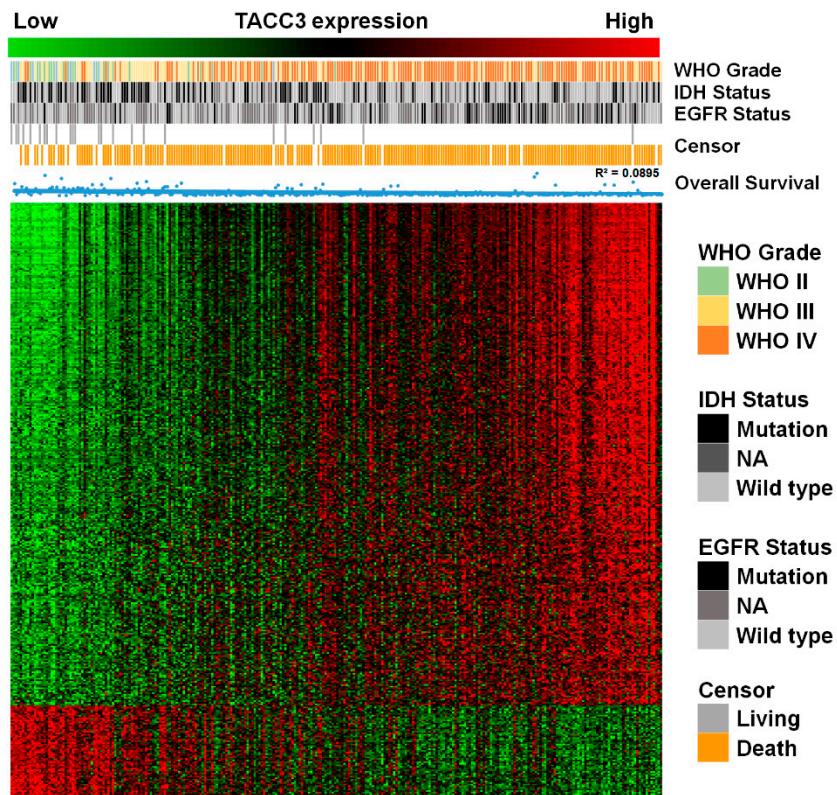

Figure S2. TACC3 associated-genes in GSE16011 datasets. WHO grade, mortality, IDH mutation frequency and overall survival were differently presented in pace with TACC3 expression.

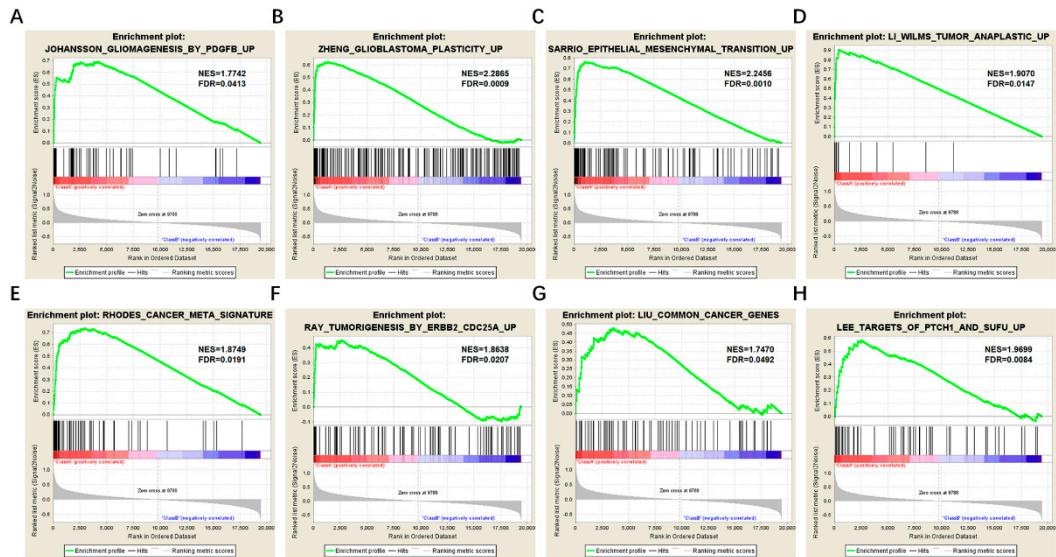

Figure S3. Gene Set Enrichment Analysis (GSEA) analyses of several gene sets were significantly enriched in the TACC3 high expression group.

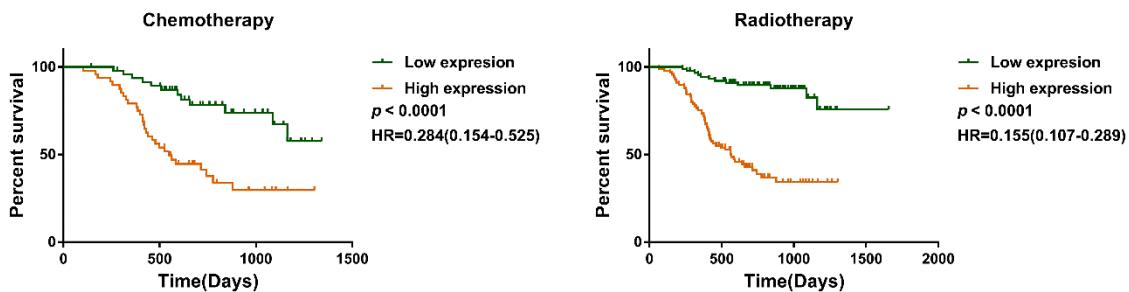

Figure S4. TACC3 could serve as an indicator for glioma patients with chemo- or radio-therapy.

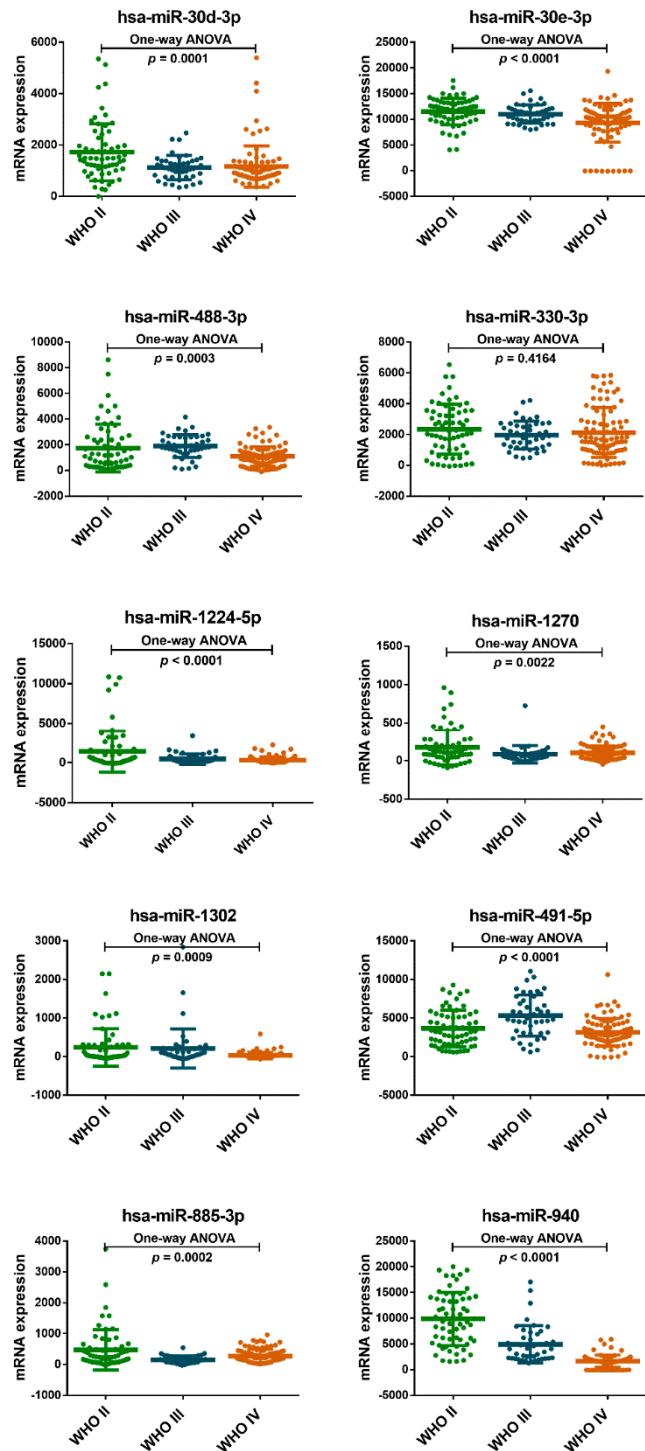

Figure S5. Expression of ten TACC3-related miRNAs in the CGGA dataset. miR-30d-3p, miR-30e-3p, miR-488-3p, miR-1224-5p, miR-1270, miR-1302, miR-491-5p, miR-885-3p and miR-940 were all significantly downregulated along with WHO grade (one-way ANOVA). miR-330-3p showed no difference.

Table S1. GO analyses for TACC3 positively-correlated genes (CGGA).
