Correlations between miRNAs and mRNAs differentially expressed between lithium excellent responders and non-responders were analyzed using miRComb. Multiple testing correction was performed according to BH. The *in-silico* score was calculated by summing the number of algorithms predicting each miRNA-mRNA pair (seven prediction algorithms were tested: MiRWALK, MicroT v4, MiRanda, miRDB, RNA22, RNAhybrid and TargetScan). Abbreviations: FC, fold change; FDR, false discovery rate.

Table S3. Pairs of miRNAs and mRNAs differentially expressed after *in vitro* lithium treatment exclusively in excellent responders, negatively correlated and predicted by *in-silico* algorithms.

Correlations between miRNAs and mRNAs differentially expressed after *in vitro* lithium treatment exclusively in excellent responders were analyzed using miRComb. No correlation was significant after multiple testing correction according to BH. The *in-silico* score was calculated by summing the number of algorithms predicting each miRNA-mRNA pair (seven prediction algorithms were tested: MiRWALK, MicroT v4, MiRanda, miRDB, RNA22, RNAhybrid and TargetScan). Abbreviations: FC, fold change; FDR, false discovery rate.

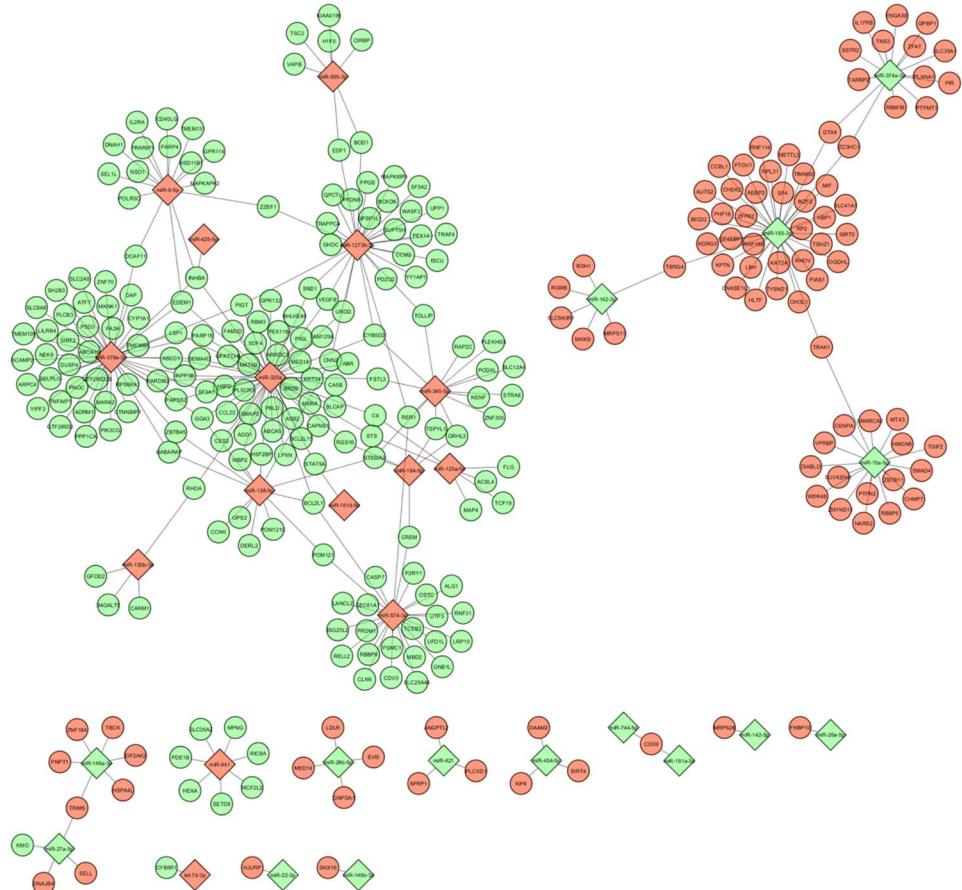

Figure S1. Interaction network between miRNAs and mRNAs differentially expressed between lithium excellent responders and non-responders. The interaction network of miRNAs and mRNAs differentially expressed between lithium excellent responders and non-responders was obtained using a force-directed layout algorithm in Cytoscape. miRNAs are indicated with a diamond, target mRNAs with circles. Down-regulated miRNAs or mRNAs are shown in red, while up-regulated miRNAs or mRNAs are shown in green. The network shows two main cluster of down-regulated and up-regulated miRNAs centered around miR-320a and miR-155-3p, respectively.

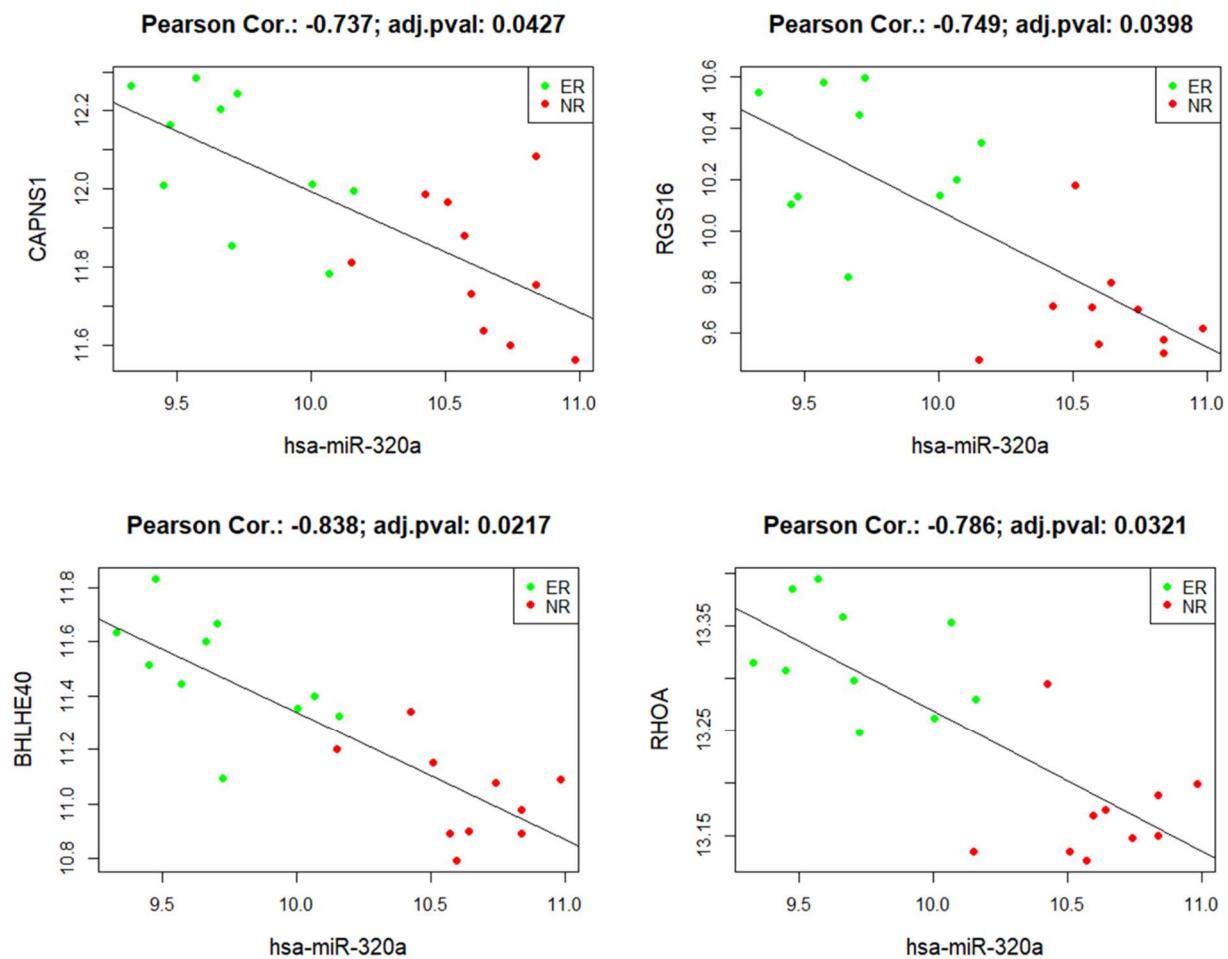

Figure S2. Correlations between the expression levels of hsa-miR-320a and its targets *CAPNS1*, *RGS16*, *BHLHE40* and *RHOA* in lithium excellent responders and non-responders. Abbreviations: adj, adjusted; cor, correlation; ER, excellent responders; NR, non-responders.

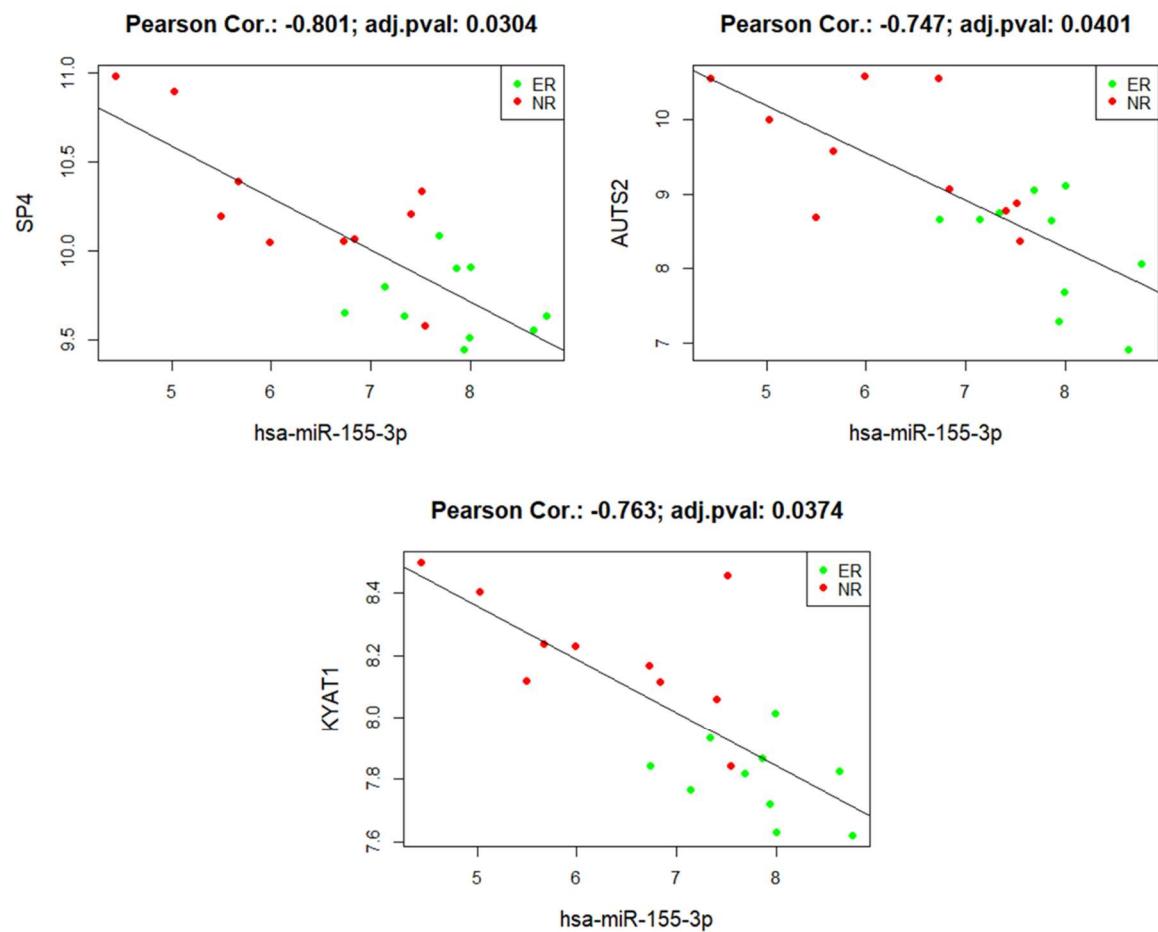

Figure S3. Correlations between the expression levels of hsa-miR-155-3p and its targets *SP4*, *AUTS2* and *KYAT1* in lithium excellent responders and non-responders. Abbreviations: adj, adjusted; cor, correlation; ER, excellent responders; NR, non-responders.
