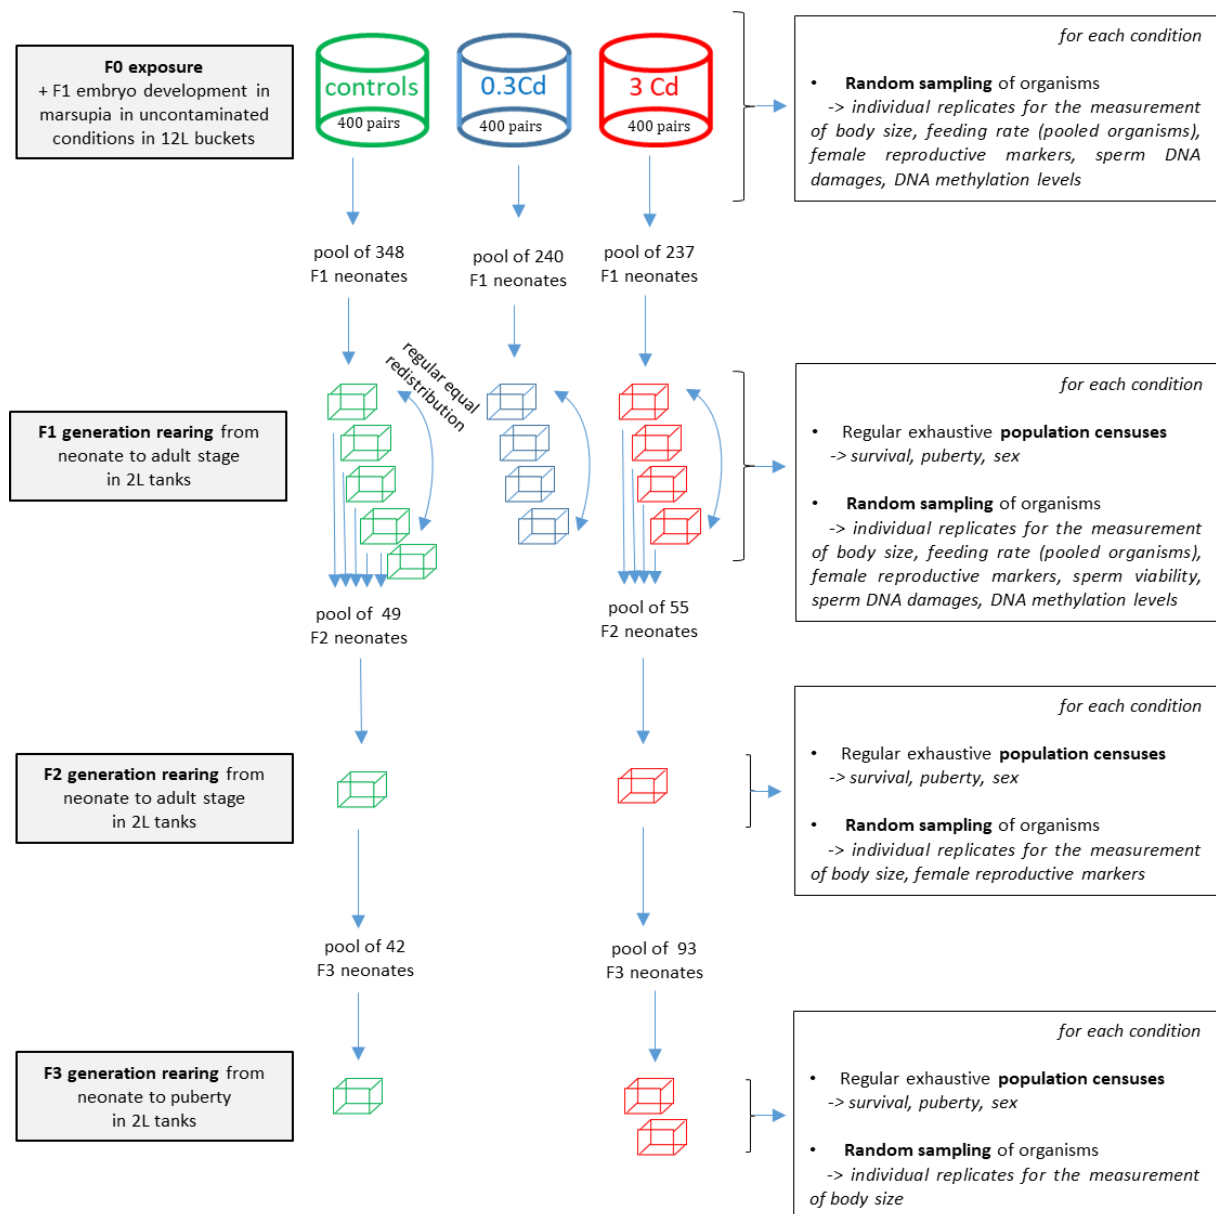

Figure S1: Description of experimental design and the schedule for the measurement of biological endpoints over the generations

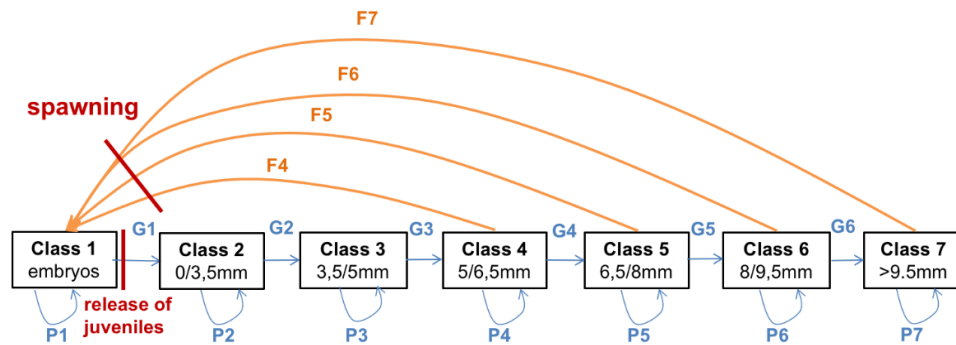

Figure S2: Life cycle graph of the *Gammarus fossarum* laboratory population with 7 size-classes. P_i = proportion of surviving and remaining organisms in size-class i , G_i = proportion of surviving and moving individuals from size-class i to size-class $i+1$, F_i = fertility in size-class i .

Figure S3: Feeding rate of F0 parents. n = 4.

Figure S4: Standardized mean secondary follicle surface of F0 females. n = 9 (control), n = 6 (0.3 µg Cd /L) and n = 5 (3 Cd µg/L).

Figure S5: Sperm viability in F0 male gammarids. Control: n = 10, 0.3 µg Cd/L: n=9, 3 µg Cd /L: n=8.

Figure S6: Global cytosine methylation level in F0 male gammarids. Control: n = 10, 0.3 µg Cd/L: n=11, 3 µg Cd /L: n=10.

Figure S7: Survival of F1 juveniles. The star denotes a significant difference between C-F0 and 0.3Cd-F0 conditions, $p < 0.05$.

Figure S8: Weekly growth rate of F1 juveniles. n=20.

Figure S9: Oocyte production in F1 generation (size-standardized oocyte number per females). n=10.

Figure S10: Standardized mean secondary follicle surface of F1 females. Control: n = 3, 0.3 µg Cd/L: n=7, 3 µg Cd/L: n=4.

Figure S11: Feeding rate of F1 males. n = 4.

Figure S12: Sperm viability in F1 males. Control: n = 9, 0.3 µg Cd/L: n=9, 3 µg Cd/L: n=10.

Figure S13: Mean tail DNA intensity (comet assay) in sperm of F1 males. Control: n = 5, 0.3 µg Cd/L: n=7, 3 µg Cd/L: n=5.

Figure S14: Global cytosine methylation level in F1 males. Control: n = 10, 0.3 µg Cd/L: n=9, 3 µg Cd /L: n=14. The star denotes a significant difference between 0.3Cd-F0 and 3Cd-F0 conditions, $p < 0.05$.

Figure S15: Survival of F2 juveniles. The star denotes a significant difference between conditions.

Figure S16: Weekly growth rate of F2 juveniles. Control: n = 15, 3 µg Cd/L: n=13.

Figure S17: Oocyte production in F2 generation (size-standardized oocyte number per females). Control: n = 11, 3 µg Cd/L: n=10.

Figure S18: Embryo number per female in F2 generation (size-standardized embryo number). Control: n = 11, 3 µg Cd/L: n=7.

Figure S19: Mean tail DNA intensity (comet assay) in sperm of F2 males. Control: n = 7, 3 µg Cd/L: n=7. The star denotes a significant difference between conditions, p<0.05.
