LDOC1 as negative prognostic marker for vulvar cancer patients

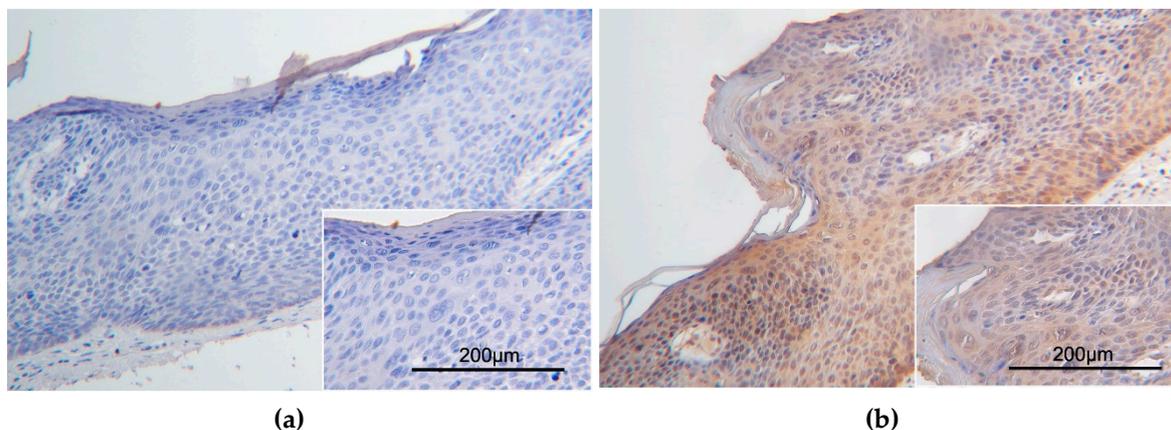

Figure S1: Immunohistochemical staining of LDOC1 in vulvar tissue. Representative photomicrographs are presented (10× and 25× lens): **a)** no expression of LDOC1 in normal vulvar tissue; **b)** moderate cytoplasmic expression of LDOC1 in vulvar intraepithelial neoplasia (VIN).

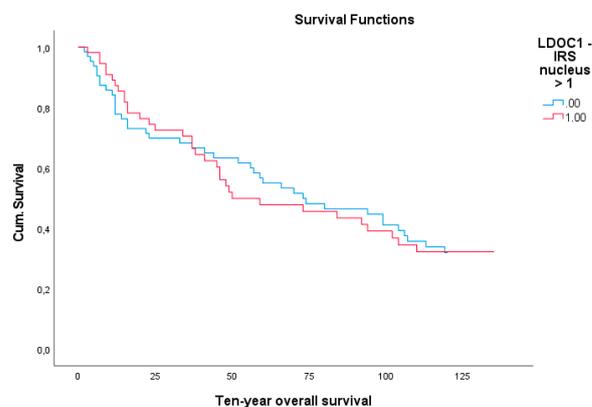

Figure S2: Kaplan-Meier survival univariate analysis for the status nuclear IRS > 1. Positive expression of LDOC1 in the cell nucleus had no influence on ten-year overall survival ($p = 0.939$).
