

**Figure S1.** IL-17RA expression in human and mouse PDAC. (a) Publicly available PDAC samples showed a weak to moderate expression of IL-17RA ([www.proteinatlas.org](https://www.proteinatlas.org)). (b) Pancreatic cancer cells express IL-17RA in a mouse model of pancreatic cancer. (c) Survival analysis of IL-17RA and IL-17A expression retrieved from the publicly available transcriptomic data of 903 patients with PDAC. There is no statistical significance between the survival of low (< 33rd percentile) and high (> 66th percentile) expression tumors regarding these two markers.
