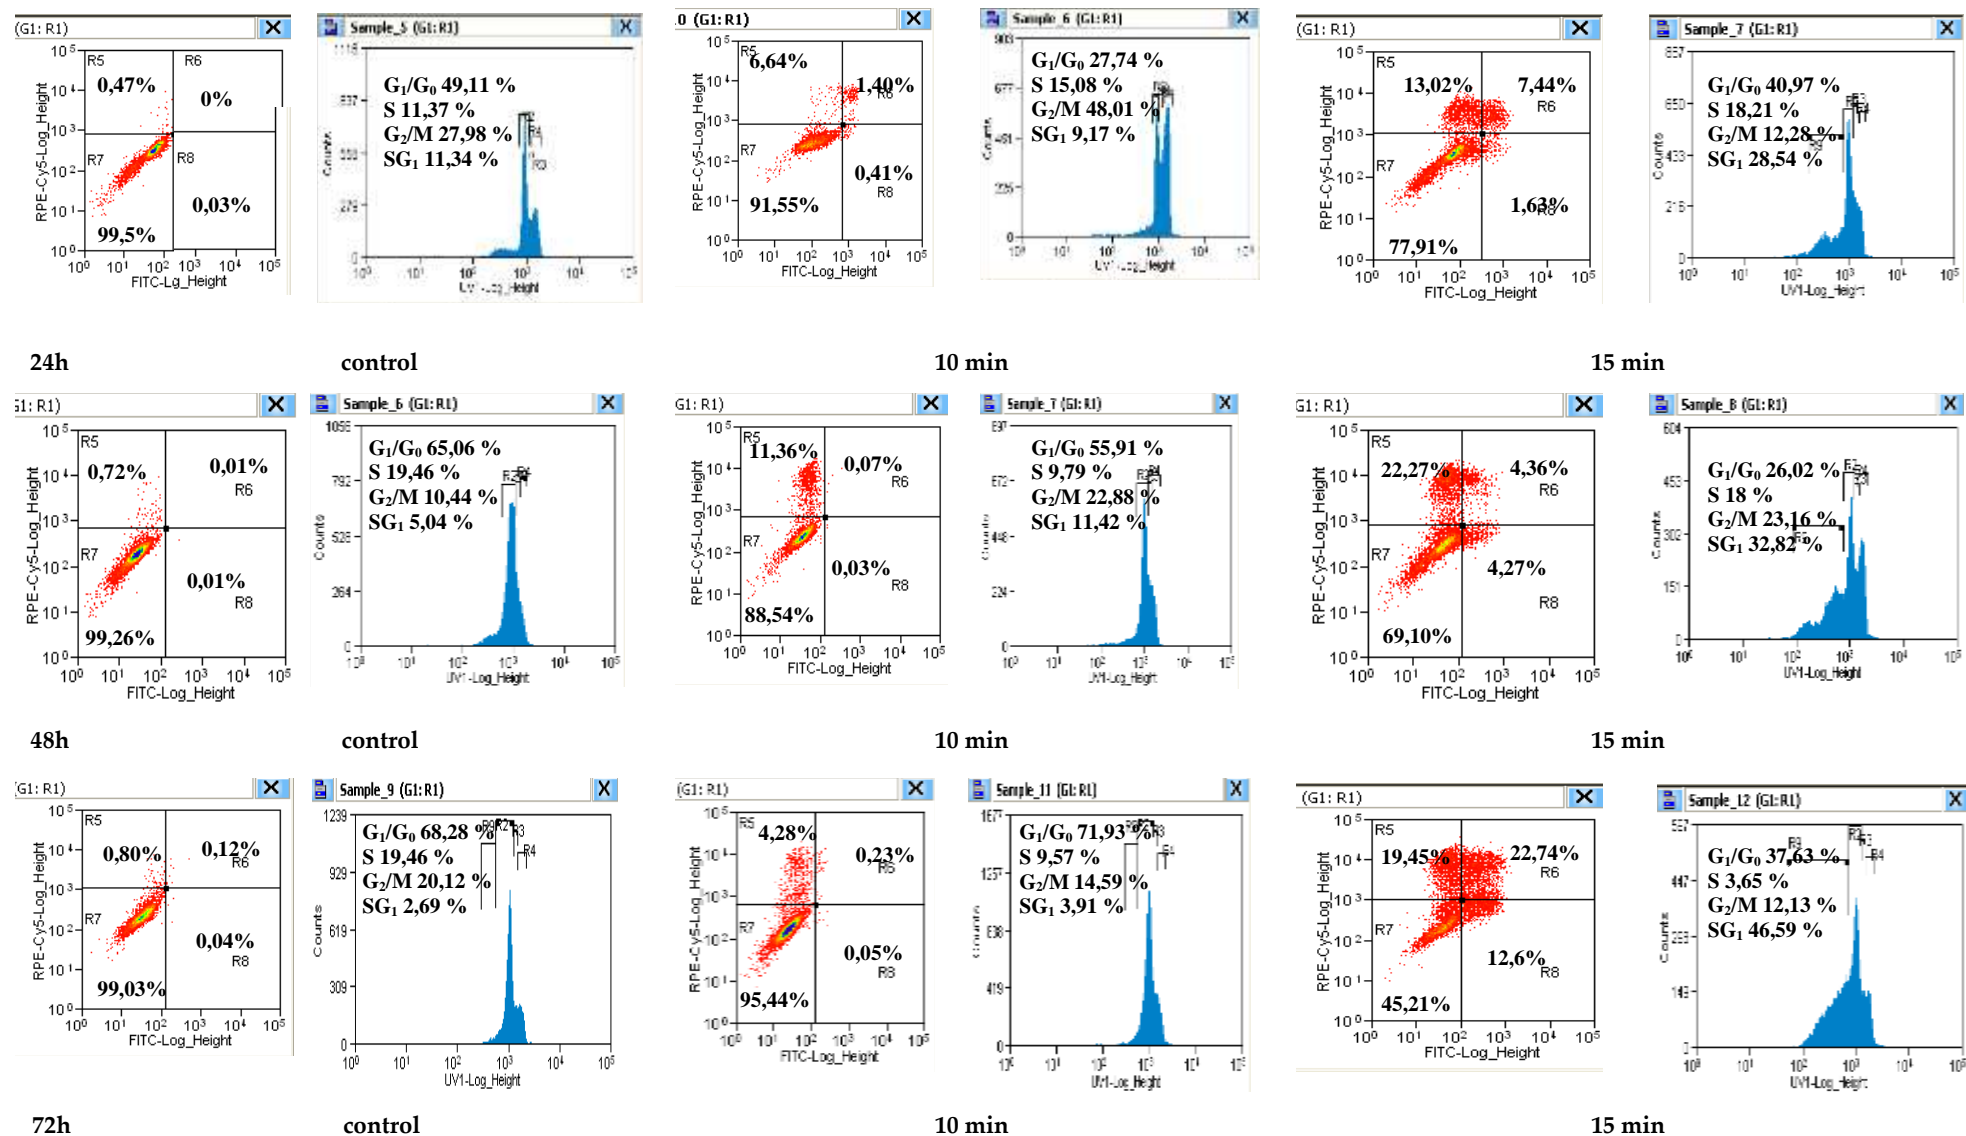

Figure. S1. The flow cytometry of cell populations after CAAP irradiation after 24, 48 and 71 h with the 10 and 15 min CAAP exposure time: (a) MSCs (HF); (b) MNNG/HOS. Red dots on the left side of each diagram show the distribution of cells by quadrant depending on their state: R5 – necrosis, R6 – late apoptosis, R7 – living cells, R8 – early apoptosis. The histograms on the right side show cell distribution by cell cycle phases: G₁/G₀, S, G₂/M, and SG₁ (G₁ subphase). The digital data on the histograms are the average values for 3 independent experiments. On the left, the histograms of cell distribution by cell cycle phases are shown in blue; G₁/G₀, S, G₂/M, and SG 1 (G₁ subphase). The digital data on the histograms are the average values of 3 independent experiments.

Table S1. Selected gene groups for RT-PCR analysis.
