

Effect of Lipopolysaccharide-induced Inflammatory Challenge on β -glucuronidase Activity and Quercetin and its Metabolites Concentration in the Choroid Plexus, Blood Plasma and Cerebrospinal Fluid

Małgorzata Domżalska, Wiesław Wiczkowski, Aleksandra Szczepkowska, Sylwia Chojnowska, Tomasz Misztal, Fruzsina R. Walter, Maria A. Deli, Hiroshi Ishikawa, Horst Schroten, Christian Schwerk and Janina Skipor

SUPPLEMENTARY MATERIALS

Supplementary Figure S1: Body temperature values and cortisol concentration in blood plasma throughout experiment 1.

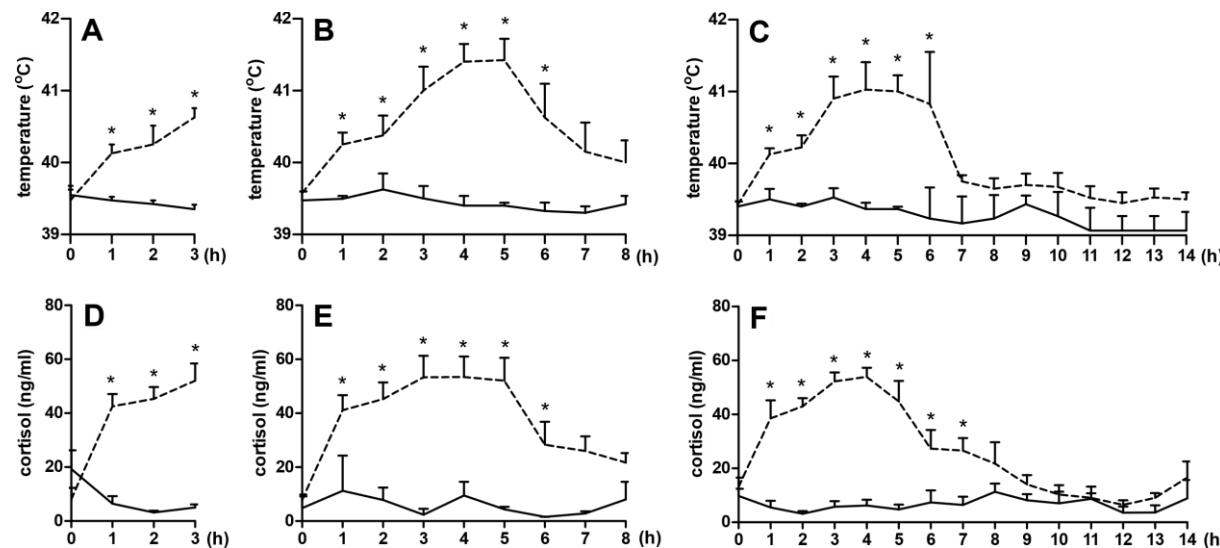

Figure S1. Mean (\pm SEM) body temperature and plasma cortisol concentration in saline-treated (solid line) and lipopolysaccharide (LPS)-treated (dotted line) ewes euthanized 3 h (A, D), 8 h (B, E) and 14 h (C, F) after saline/LPS administration in experiment 1. * indicate significant differences at $p < 0.05$ (two-way ANOVA—Tukey's post hoc test).

Supplementary Figure S2: *CCL2* and *CXCL1* gene expression in the ovine ChP.

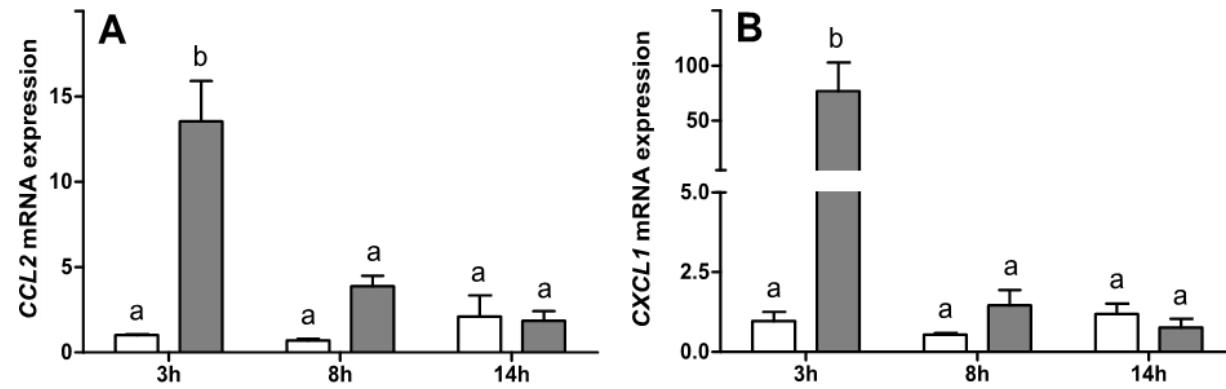

Figure S2. Mean (\pm SEM) relative mRNA expression of *CCL2* (A) and *CXCL1* (B) in the ovine choroid plexus, 3, 8, and 14 h after saline (white bars) or lipopolysaccharide (LPS, grey bars) administration. Different lower case letters indicate significant differences at $p < 0.05$ (two-way ANOVA—Tukey's post hoc test).

Supplementary Figure S3: Body temperature values and cortisol concentration in blood plasma throughout experiment 2.

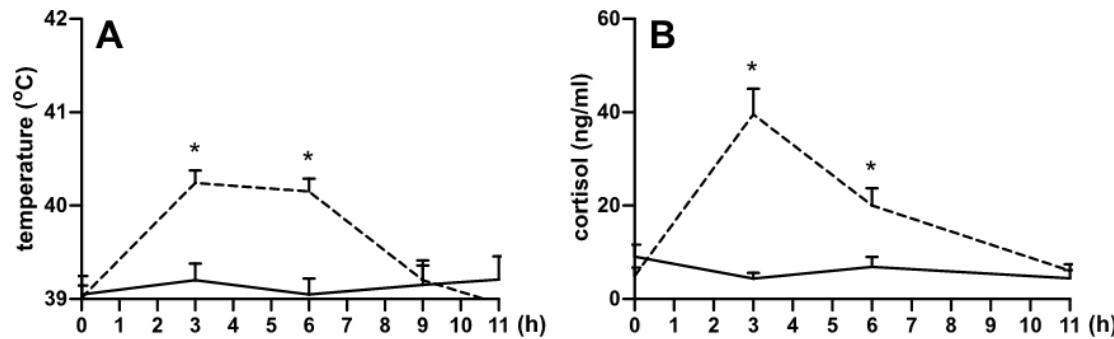

Figure S3. Mean (\pm SEM) body temperature (A) and plasma cortisol concentration (B) in ewes treated with saline (solid line) or lipopolysaccharide (LPS, dotted line) in experiment 5. * indicate significant differences at $p < 0.05$ (two-way ANOVA—Tukey's post hoc test).

Supplementary Figure S4: CSF/serum albumin ratio (Q-Alb) throughout experiment 2.

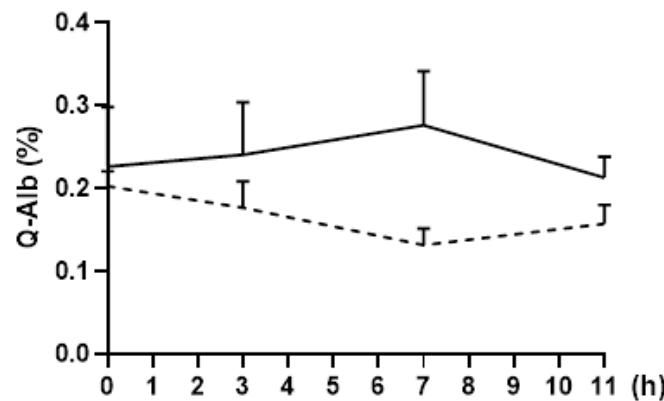

Figure S4. Mean (\pm SEM) cerebrospinal fluid/serum albumin ratio (Q-Alb) in ewes treated with saline (solid line) or lipopolysaccharide (LPS, dotted line) in experiment 5 (two-way ANOVA—Tukey's post hoc test).

Supplementary Table S1: The % proportion of quercetin derivatives detected in sheep blood plasma over time after an intravenous administration of Q3GA at a dose of 6 mg/kg bw in saline- (C) and LPS-treated group.

	time (min)														total (%)

Supplementary Figure S5: Validation of rat ChP epithelial cells isolation and inflammatory response to LPS stimulation

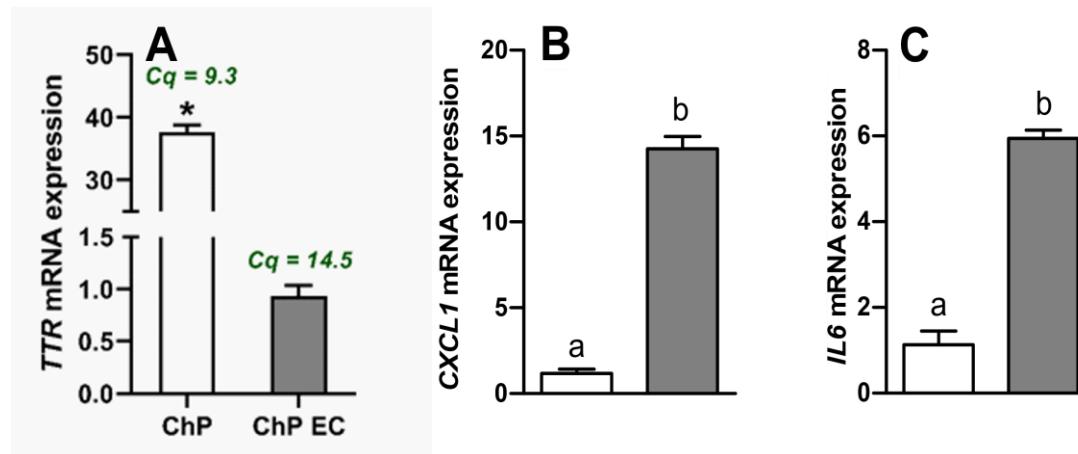

Figure S5. (A) Mean (\pm SEM) TTR mRNA expression in choroid plexus (ChP, white bar) and choroid plexus epithelial cells (ChP EC, gray bar) of male rats. * indicate significant differences at $p < 0.05$ (Mann-Whitney U test); Cq – cycle quantification value, (n=3). (B, C) Mean (\pm SEM) relative mRNA expression of CXCL1 (B) and IL6 (C) in rat ChP epithelial cells after 3 h incubation with saline (white bars) or lipopolysaccharide (LPS, 5 μ g/ml, grey bars), (n=3). Different lower case letters indicate significant differences at $p < 0.05$ (Mann-Whitney U test).

Supplementary Figure S6: Response of HIBCPP cell line on LPS treatment.

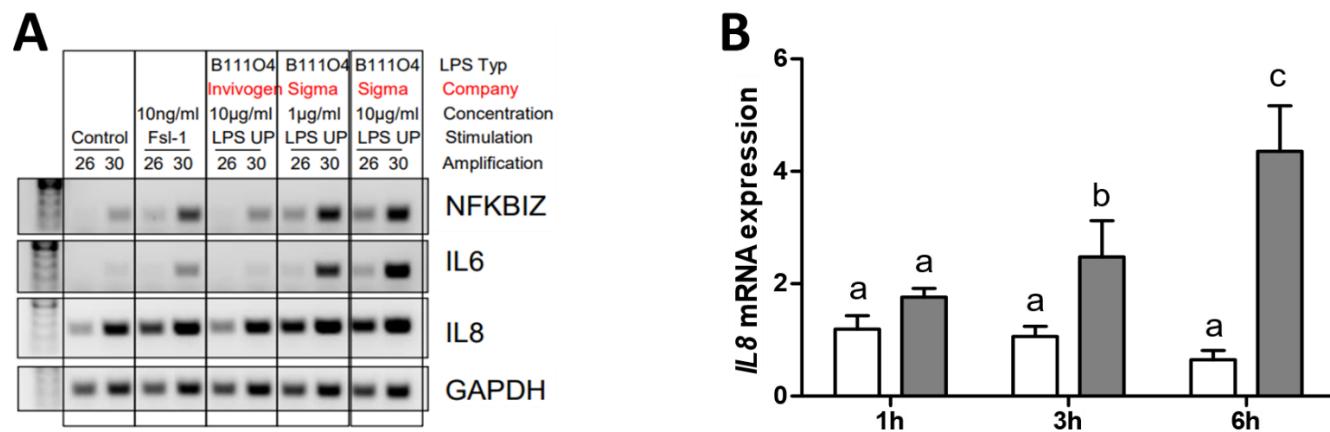

Figure S6. (A) regular PCR results showing mRNA expression of *NFKBIZ* (line 1), *IL6* (line 2), *IL8* (line 3), and reference gene *GAPDH* (line 4) in saline, Fsl-1, and lipopolysaccharide (LPS, No: trl-eblps Invivogen, Toulouse France; No: L3024-5MG Sigma Aldrich, St. Louis, MO, USA) treated HIBCPP cells.
(B) Mean (\pm SEM) relative mRNA expression of *IL8* in the HIBCPP cell line after 1, 3, and 6 h incubation with saline (white bars) or lipopolysaccharide (LPS, 5 μ g/ml, grey bars), (n=3). Different lower case letters indicate significant differences at $p < 0.05$ (two-way ANOVA – Tukey's post hoc test).

GUSB – β-glucuronidase; *IL8* – interleukin 8; *IL6* – interleukin 6; *CXCL1* – C-X-C motif chemokine ligand 1; *CCL2* – C-C motif chemokine ligand 2; *TTR* – transthyretin;

*reference genes: *GAPDH* – glyceraldehyde-3-phosphate dehydrogenase; *ACTB* – beta-actin; *YWHAZ* – tyrosine 3-monooxygenase/tryptophan 5-monooxygenase activation protein zeta; *PPIA* – peptidylprolyl isomerase A; *HDAC1* – histone deacetylase1. Exon/exon span: human *GUSB* forward primer – F:754/755; rat *GUSB* reverse primer – R:432/433; sheep *GUSB* reverse primer – R:2038/2038; sheep *CXCL1* reverse primer – R:322/323.

Supplementary Figure S7: Linear dilution curve of sheep serum albumin and cerebrospinal fluid and blood plasma albumin levels detected by western blot method

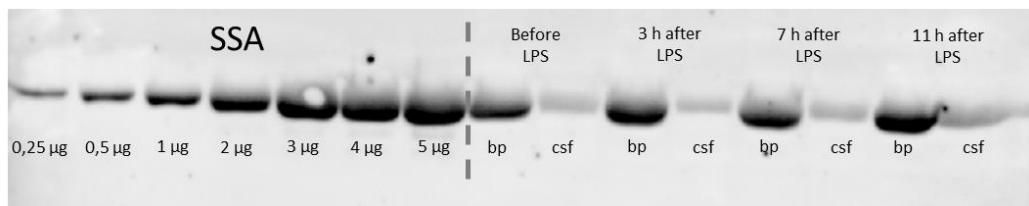

Figure S7. Determination of albumin levels by western blot analysis in sheep blood plasma (bp) and cerebrospinal fluid (csf) samples collected before and 3, 7 and 11 h after LPS administration. The densities of the bands were based on sheep serum albumin (SSA) dilution curve.

Supplementary Table S4: Sensitivity of the HPLC-MS/MS assay for Q3GA, Q, iR and iRGA for blood plasma, cerebrospinal fluid (CSF) and tissues/ cells.

	Q3GA	Q	iR	iRGA
blood plasma	0,00192 nmol/L	0,00046 nmol/L	0,00019 nmol/L	0,00014 nmol/L
CSF	0,00226 nmol/L	0,00132 nmol/L	0,00054 nmol/L	ND*
tissues/cells	0,00155 nmol/g	0,00053 nmol/g	0,00035 nmol/g	ND*

ND* - no data
