

## Supplementary materials

Table S1. Definition of categories and general criteria for histomorphological scoring.

CATEGORY	CRITERION	DEFINITION	SCORE VALUE <sup>1</sup>
Inflammatory Cell Infiltrate	Severity	Neutrophil density (per ten 400x high-power fields; field diameter of 0.45 mm): 0 = No neutrophils 1 = 1 or 2 neutrophils 2 = 3 - 5 neutrophils 3 = >5 neutrophils	0 1 2 3
	Extent	Extent of inflammatory cell infiltration: Mucosal Mucosal and submucosal Mucosal, submucosal, and transmural	0.5 1 1.5
Epithelial Changes <sup>2</sup>	Hyperplasia	Percent above height of control/baseline crypt (0.2 mm); visible as crypt elongation: No change: 0 Mild: 1- 50% Moderate: 51-100% Marked: >100%	0 1 2 3
	Goblet Cell Count	Change in goblet cell numbers relative to baseline goblet cell numbers per crypt: 0 = No change from baseline goblet cell count 1 = Increase or decrease of 1-3 goblet cells from baseline 2 = Increase or decrease of 4-8 goblet cells from baseline 3 = Increase or decrease of 8 or more goblet cells from baseline	0 1 2 3
	Erosion	Loss of surface epithelium: 0 = No pathological changes observed 1 = Attenuation (gaps of 1-10 epithelial cells/lesion) 1.5 = Absence of epithelium (gaps of >10 epithelial cells/lesion)	0 1 1.5
	Dysplasia	Ordered arrangement of crypt epithelial cells & crypt epithelial cell nuclei; loss of epithelial polarity Mild: Mostly ordered arrangement, nuclei are in basal location Moderate: Slightly disordered arrangement, some nuclei are near/in apical location Severe: Disordered arrangement, nuclei are in apical location	0 1 2
Mucosal Architecture	Crypt Loss	Mucosa devoid of crypts	1

<sup>1</sup>Score Value Max = 15 points; <sup>2</sup>From well-oriented samples with longitudinally cut crypts only; Modified from Erben *et al.* (2014) and Bischor *et al.* (2017).

Table S2. Disease Activity Index (DAI) scoring criteria modified from Maxwell *et al.* (2009).

DISEASE ACTIVITY INDEX (DAI)			
Stool Consistency	Stool Blood	Body Weight Loss (%) <sup>a</sup>	Score
Normal	Normal	0-1 %	0
Moist and Sticky	Brown/Reddish Colour	1-5 %	1
Soft	Visible Blood	5-10 %	2 <sup>b</sup>
Diarrhea	Rectal Bleeding	10-20 % <sup>c</sup>	3

<sup>a</sup> % Body Weight Loss =  $\frac{(\text{Body Weight on Day X} - \text{Initial Body Weight})}{\text{Initial Body Weight}} \times 100$

<sup>b</sup> If a mouse scores  $\geq 2$  in any of the above criteria, supportive therapy must be initiated, and monitoring increased to 4 times per day.

<sup>c</sup> If a mouse scores  $\geq 20\%$  body weight loss, it will be euthanized.

Table S3. Primer sequences used for RT-qPCR analysis.

GENE	FORWARD (5' - 3')	REVERSE (5' - 3')	EFFICIENCY (%)
