4 Figure 1. Image of Western blot analysis of A2A receptors in tissue homogenates of the caudate-  
5 putamen (CP), globus pallidus (GP), and cerebral cortex (CTX). Reference of molecular weight  
6 markers (MM) on the left column. A specific A2A receptor band at about 44-45 kDa is detected in  
7 the three brain areas, more intense in the CP.
