

Supplementary material

Table S1. Cardiovascular risk categories according to age thresholds

	<50 years	50-69 years	≥70 years
Low to moderate CVD risk	<2.5%	<5%	<7.5%
High CVD risk	2.5 to <7.5%	5 to <10%	7.5 to <15%
Very high CVD risk	≥7.5%	≥10%	≥15%

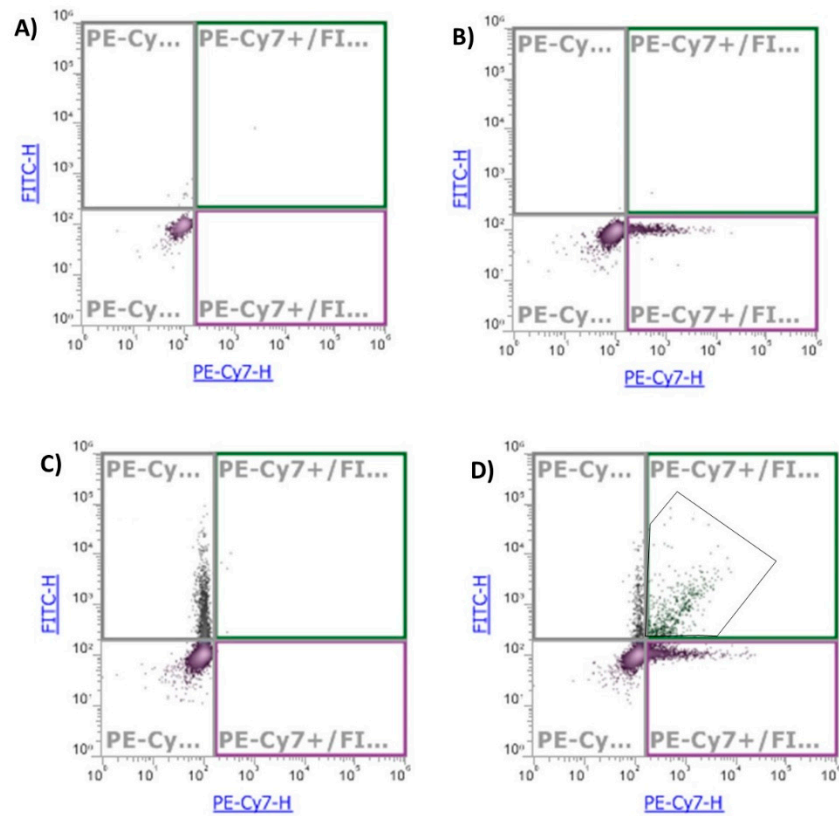

Figure S1. Gating and acquisition strategy for the detection of circulating extracellular vesicles with flow cytometry. A) Buffer only. B) CD41-PE Cy7 single stain. C) Annexin V-FITC single stain. D) Double staining with CD41-PE Cy7 and Annexin V-FITC.
