Supplementary Figures

Supplementary Figure S1

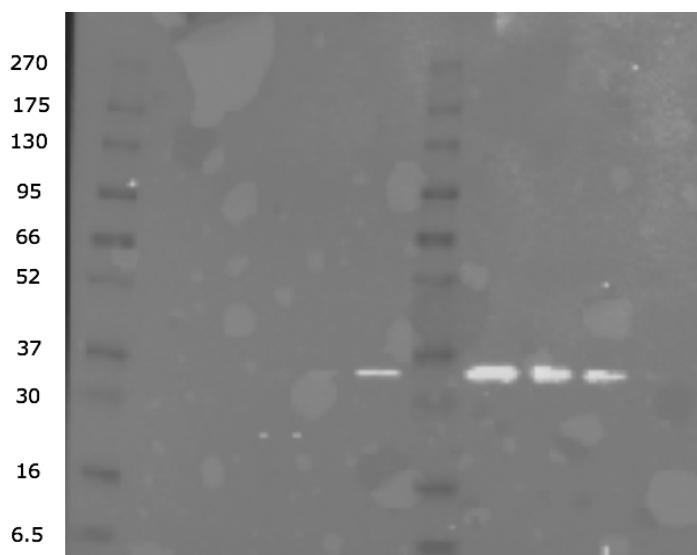

Supplementary Figure S1. Full lenght images of Western blots depicted in Figure 2 and corresponding SDS-PAGE.
Full lenght images of Western blots (WB) (upper panels, A and B) depicted in Figure 2, developed with anti-ATP synthase β antibody, and corresponding Coomassie stained SDS-polyacrylamide gels (lower panels, C and D), run in parallel with WB on the same *Scaphoides titanus* insect samples (one insect sample per single lane), analyzed at 14 (panels A and C) and 20 (panels B and D) days post injection (dpi) of dsRNAs targeting green fluorescent protein (dsGFP) or ATP synthase β (dsATP), with construct St_dsATP1. The masses of protein standards migrated together with samples are indicated in kDa.

Supplementary Figure S2

Supplementary Figure S2. Survival rates of *Scaphoideus titanus* following dsRNA injection. Survival rates of 61 *Scaphoideus titanus* adults over a 14-day period after microinjection of 80 ng of dsRNAs targeting green fluorescent 62 protein (GFP) or ATP synthase β (ATP), with construct St_dsATP1.

Supplementary Figure S3

Supplementary Figure S3. Full lenght image of Western blots depicted in Figure 3. Full lenght image of Western blots depicted in Figure 3, developed with anti-cathepsin L primary antibody, on ovaries dissected from *Scaphoides titanus* females (ovaries from one insect per single lane) sampled at 20 days post injection of dsRNAs targeting green fluorescent protein (dsGFP) or ATP synthase β (dsATP), with construct St_dsATP1. The masses of protein standards migrated together with samples are indicated in kDa.
