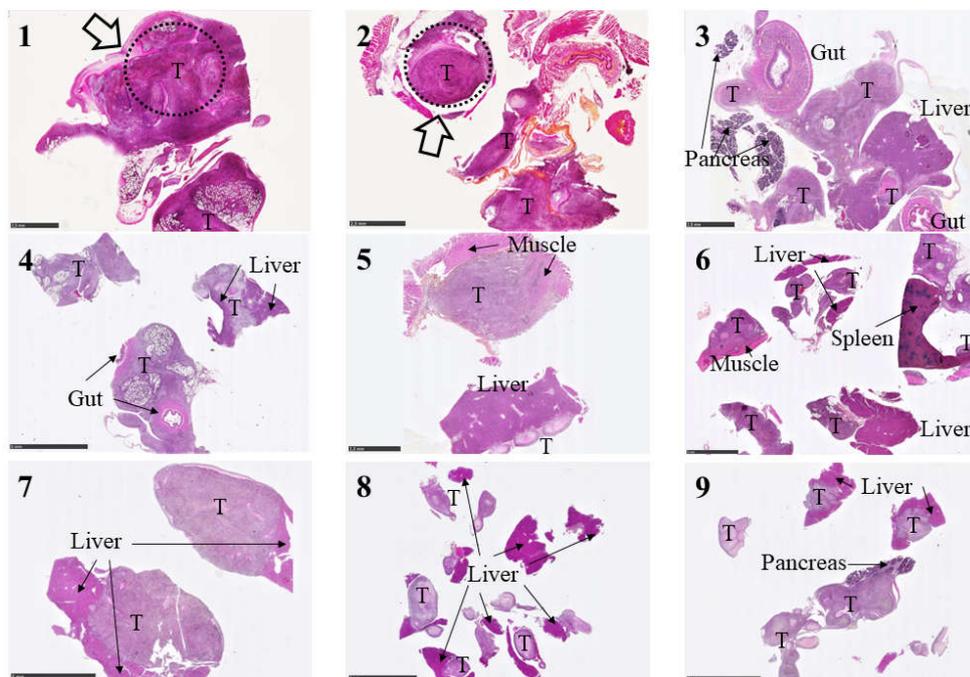

Figure S1. General views of M5-T1 tumors from the group of untreated rats (HPS staining, scale bars at the bottom left corner of each photograph). Samples **1** and **2** were selected for the study according to criteria described in sections 4.2 and 4.3 (Materials and methods). The dashed black circles (arrows) represent areas of interest, used both for histological (morphology of tumor infiltrating lymphocytes) and proteomic analyses. T = tumor.
