

## Supplementary Figures and Tables

Figure S1.

**Figure S1.** Presorted BALF cells and IgE-positive sorted BALF cells, including the forward scatter (FSC) and the side scatter (SSC). Analysis of anti-horse IgE-positive cells in BALF collected from an asthmatic horse using flow cytometry. In (A), IgE-positive cells (y-axis) with forward scatter (x-axis) and in (B), IgE-positive cells (y-axis) with side scatter (x-axis) are shown.

Figure S2.

**Figure S2.** Bi-clustering heat map illustrating RNA-seq differential expression. These data come from the Dseq2 analysis of RNA-Seq data from total BALF cells (BAL) and isolated BALF MCs (MCs), which sorted the top 30 genes by their adjusted p-values. The colored legend indicates the condition (BAL or MCs) and the relative expression level.

**Table S1.**Antibodies tested for cross reactivity with horse BALF MCs.<sup>a</sup>

<sup>a</sup> List of monoclonal antibodies with low or no cross-reactive binding to horse BALF MCs, as determined by flow cytometry or MACS Quant Analyzer 10, using standard staining protocol.

**Table S2.** The most highly expressed genes from total horse BALF cells and from the three mast cell isolates MC1, MC2 and MC3. The top genes are ordered based on the top 100 genes in the MC1 isolate. The information was obtained from the common data analysis outlined in the Materials and Methods section.
