

Figure S1. DAMs of ZX8 versus ZK1754. (a) ZX8-S5 vs. ZK1754-S5 differential metabolite heatmap. (b) ZX8-S6 vs. ZK1754-S6 differential metabolite heatmap. Each sample is represented by a column, each metabolite by a row, and the content of each metabolite is represented by a bar with a specific color, with up- and down-regulated metabolites represented by different degrees of red and green, respectively. Three biological replicates were used for metabolite profiling.
