

# Supplemental Figure S1

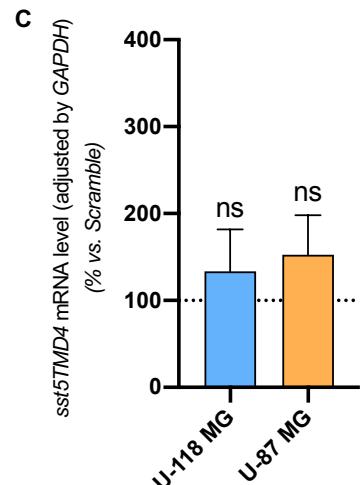

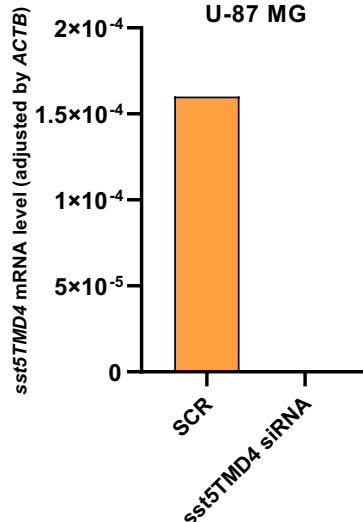

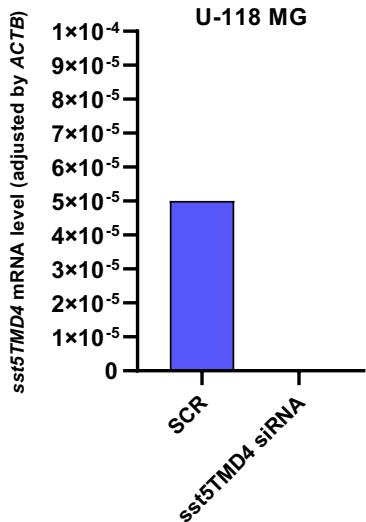

Supplemental Figure S1. Comparison of *sst5TMD4* mRNA expression between two different control sample groups (first figure, left top corner) and relation between *sst5TMD4* mRNA levels and different clinical factors in glioblastoma patients (other figures). Non-tumor control brains were obtained from autopsies or epileptic patients (lobectomy). Clinical parameters measured in GBM samples were *TP53* mutations, age, sex, previous tumors, concomitant pathologies, epilepsy, focal deficit, cognitive impairment, headache, eloquent affected area, and resection grade.

## Supplemental Figure S2

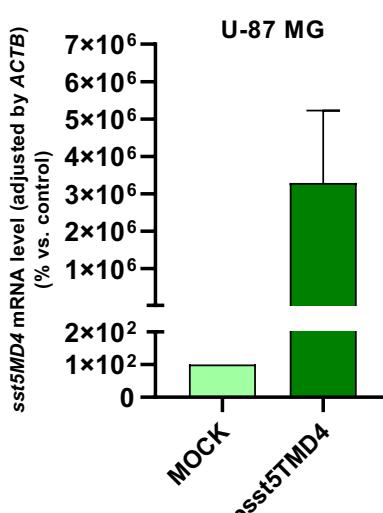

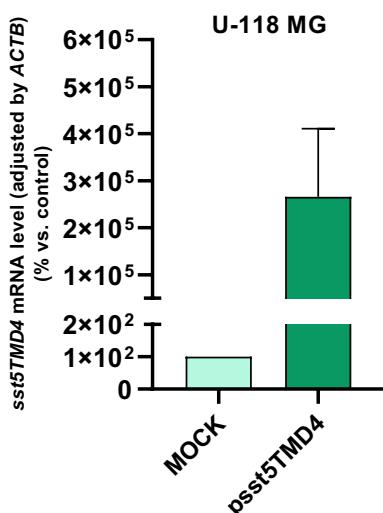

**A**

**B**

**D**

**Supplemental Figure S2. Validation of the modulation of *sst5TMD4* expression in U-87 MG and U-118 MG cell lines.** (A) Validation of stable overexpression of *sst5TMD4* in cells used for the functional assays. (B) Validation of transient silencing of *sst5TMD4* in cells used for the functional assays and (C) validation of the possible off-target *SSTR5* mRNA expression. (D) Validation of transient overexpression of *sst5TMD4* in cells used for the functional assays for the signaling assay (phosphorylation array).

# Supplemental Table S1

**Supplemental Table S1.** Specific primers for human transcripts used in this study [including the two housekeeping genes (HK)] were specifically designed for quantitative real-time PCR. The official name of the genes, NCBI accession number of the transcripts, primers sequences, and product sizes of the amplification products are included.

	Gene	Genbank Accession number	Sense sequence	Antisense sequence	Amplicon size (pb)
HKs SSTR FAMILY	<i>ACTB</i>	NM001101	ACTCTTCCAGCCTTCCTTCCT	CAGTGATCTCCTCTGCATCCT	176
	<i>GAPDH</i>	NM_001256799	AATCCCACCATCTTCCA	AAATGAGCCCCAGCCTTC	122
