

Supplement

Table S1. Result overview of interference experiments. Injection of 11-OHA4-d7 delivers a relevant signal (*) with an intensity of 1.3% of its own intensity on the mass trace of 11-OHT. *: Relevant signals with insufficient chromatographic separation.

		Injected analyte										
Mass trace of interfered analyte	Analytes	11-KA4	11-KA4-d10	11-KT	11-KT-d3	11-OHA4	11-OHA4-d7	11-OHT	11-OHT-d5	F	E	DHEAS
	11-KA4	100%		0.12%*		<0.1%*	0.2%*	<0.1%*			0.3%*	
	11-KA4-d10		100%				1.6					0.8%
	11-KT	2.0%		100%		3.4%	0.5%*	<0.1%*				
	11-KT-d3			0.2%*	100%		0.2%*	<0.1%*				
	11-OHA4	1.3%		63%		100%	0.2%*	<0.1%*		0.3%*		
	11-OHA4-d7		0.3%			100%			93%			
	11-OHT			0.5%	1.2%	2%	1.3%*	100%				
	11-OHT-d5		3.9%				79%		100%			
	F									100%		
	E										100%	
	DHEAS											100%

11-KA4, 11-ketoandrostenedione; 11-KT, 11-ketotestosterone; 11-OHA4, 11 β -hydroxyandrostenedione; 11-OHT, 11 β -hydroxytestosterone; F, cortisol; E, cortisone; DHEAS, dehydroepiandrosterone sulfate.

Table S2. Experimental and calculated LLOQs as well as calculated LODs for 11-OAs.

Analyte	LLOQ (exp., n=3)		LLOQ (calc., s/n = 10)		LOD (calc., s/n = 3)
	[pmol/l]	CV [%]	s/n	[pmol/l]	
11-KA4	63	20	13	48	15
11-KT	100	9.1	17	59	18
11-OHA4	320	3.9	30	107	32
11-OHT	83	5.7	13	64	19

11-KA4, 11-ketoandrostenedione; 11-KT, 11-ketotestosterone; 11-OHA4, 11β-hydroxyandrostenedione; 11-OHT, 11β-hydroxytestosterone; CV, coefficient of variation; s/n, signal to noise.

Table S3. Means and standard derivation (SD) of determined concentrations of 11-OAs in 42 healthy individuals (19 males) between 2 and 79 years. ^aMean of median concentrations of 83 females between 4 and 10 years. (Rege 2018, doi: 10.1210/jc.2018-00736) ^bMean of mean concentrations of 141 healthy individuals (69 males) between 18 and 39 years. (David 2020, doi:10.1210/clinem/dgaa343)

	11-KA4 [nmol/l]	11-KT [nmol/l]	11-OHA4 [nmol/l]	11-OHT [nmol/l]
LLOQ	0.063	0.100	0.320	0.083
Mean (SD)	0.41 (0.45)	0.78 (0.59)	2.10 (1.8)	0.25 (0.25)
Mean ^a	0.36	0.44	0.80	0.15
Mean ^b	0.53	0.84	3.98	0.39

Table S4. Concentrations of 17-OHP, A4, F, E, DHEAS, P and T in Chromsystems 6PLUS1 Multilevel serum calibrator level 1-5 and MassCheck® steroid serum control level 1-3 as well as spike concentration of 11-OAs in Chromsystems calibrators, Chromsystems controls and serum controls.

	Chromsystems 6PLUS1 Multilevel serum calibrator							Spike concentrations of 11-OAs in Chromsystems 6PLUS1 Multilevel serum calibrator			
	17-OHP [nmol/l]	A4 [nmol/l]	F [nmol/l]	E [nmol/l]	DHEAS [nmol/l]	P [nmol/l]	T [nmol/l]	11-KA4 [nmol/l]	11-KT [nmol/l]	11-OHA4 [nmol/l]	11-OHT [nmol/l]
Level 1	0.284	0.646	27.9	2.8	299	0.464	0.194	0.083	0.083	0.83	0.082

17-OHP. 17 α -hydroxyprogesterone; A4. androstenedione; E. cortisone; DHEAS. dehydroepiandrosterone sulfate; P. progesterone; T. testosterone; 11-KA4. 11-ketoandrostenedione; 11-KT. 11-ketotestosterone; 11-OHA4. 11 β -hydroxyandrostenedione; 11-OHT. 11 β -hydroxytestosterone; SD. standard derivation

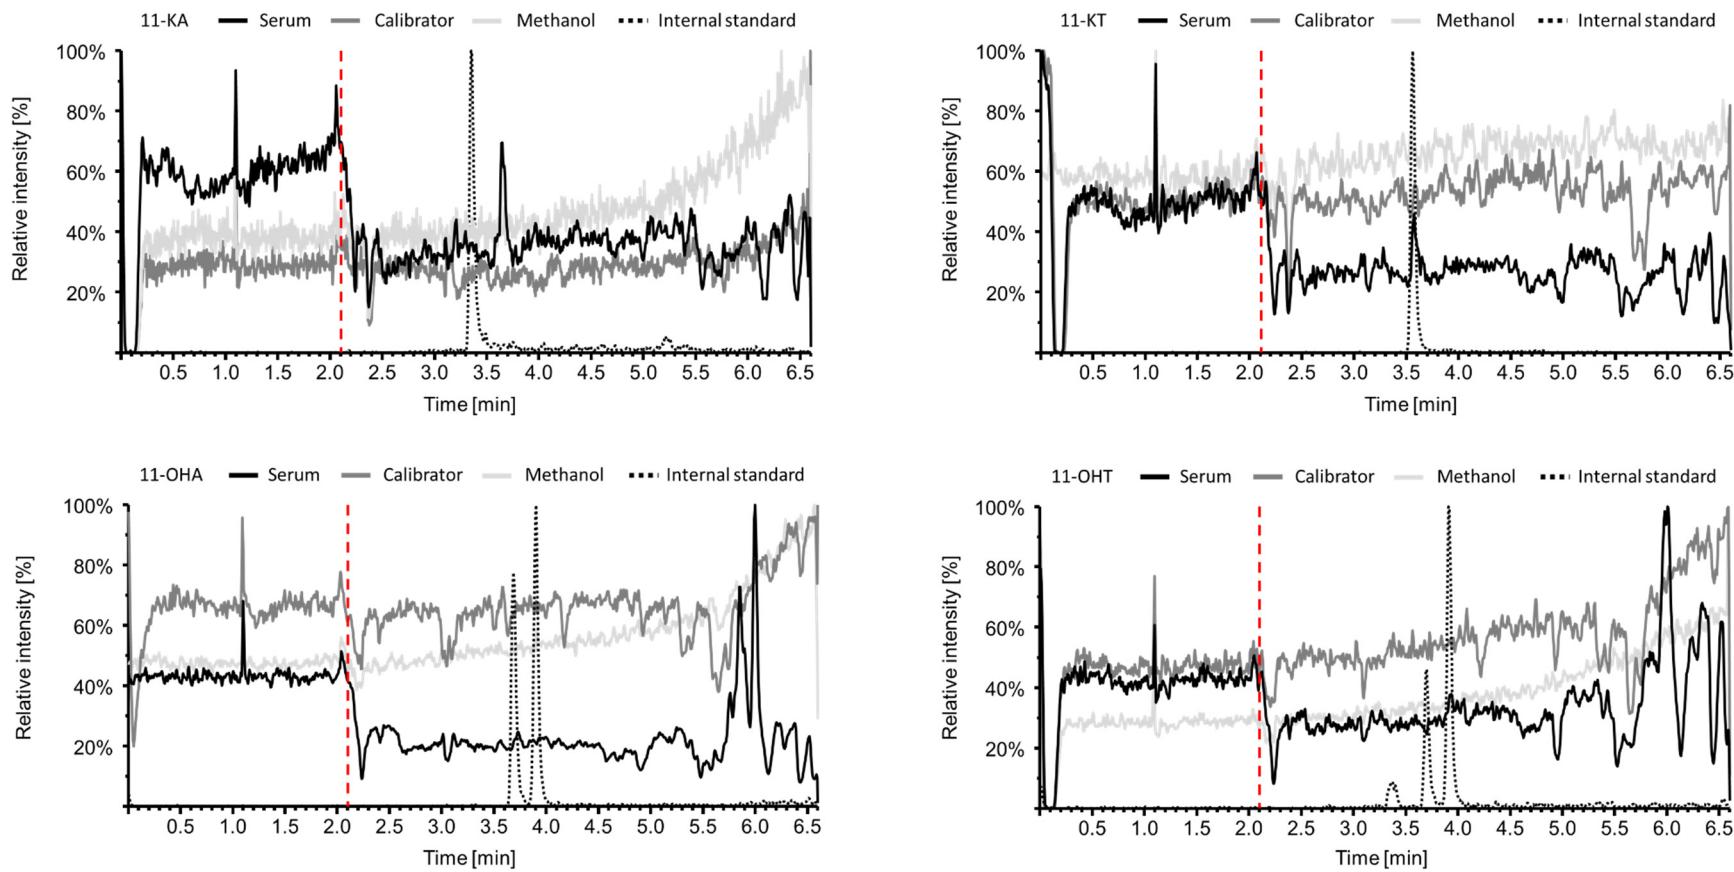

Figure S1. Exemplary chromatograms of post column infusion of four 11-OA including their corresponding internal standard (grey dashed line). In methanol (light grey) and calibrator (grey), negligible matrix effects were observed. In serum samples (black), an intensity loss by the first fraction of matrix constituents reaching the mass spectrometer was observed starting with the red dashed line in example chromatograms for 11-OAs. This ion suppression by the matrix of serum samples was observed across the detection window affecting all mass transitions of all analytes and internal standards. 11-KA4. 11-ketoandrostenedione; 11-KT. 11-ketotestosterone; 11-OHA4. 11 β -hydroxyandrostenedione; 11-OHT. 11 β -hydroxytestosterone.
