

Table S1. Number of sequences and OTUs generated using UPARSE per primer pairs and percentage retained after manual screening of BLAST identifies.

	Total^a		Confident fungal ID^b(Total endophytic fungi)		Mycorrhizal^c(OMF)		Unidentified	
	Sequences	OTUs	Sequences	OTUs	Sequences	OTUs	Sequences	OTUs
ITS3/ITS4OF	1844402	1175	1715590 (93.02%)	944(80.34%)	76218 (4.13%)	65 (5.53%)	127060 (6.89%)	217 (18.46%)
ITS86F/ITS4	2175653	1627	1642501 (75.49%)	1456 (89.49%)	9234 (0.42%)	39 (2.4%)	8424 (0.39%)	62 (3.81%)

^aOTUs was calculated at 3% sequences dissimilarity and removed the low frequency OTUs with abundance < 0.001%

^b OTU identities sharing > 90% sequence similarity with fungal species and which are based on sequence lengths >150 bp.

^c Confident fungal OTUs with BLAST results matching fungal families described as OrM in the studied orchid species (Table S2).

Table S2. List of fungal taxa known or suspected to form orchid mycorrhizal (OMF associations with Orchidaceae species which was used to identify sequences corresponding to potential OMF. Analyses were restricted to those fungal taxa previously characterized in the studied species (*Habenaria* species) and other green terrestrial orchids, which are indicated in bold (adapted from Dearnaley *et al.*, 2012).

Phylum	Sub phylum	Class	Order	Family	Genus
Basidiomycota	Pucciniomycotina	Atractiellomycetes			
	Agaricomycotina	Agaricomycetes	Agaricales	Agaricaceae	Coprinus
				Inocybaceae	Inocybe
				Marasmiaceae	Gymnopus
					Marasmius
					Mycenaceae
				Psathyrellaceae	Psathyrella
				Strophariaceae	Hymenogaster
			Cantharellales	Ceratobasidiaceae	Ceratobasidium
					Thanatephorus
				Tulasnellaceae	Tulasnella
			Sebacinales	Serendipitaceae	
			Thelephorales	Thelephoraceae	Thelephora
Tomentella					
Russulales	Russulaceae	Russula			
Ascomycota	Pezizomycotina	Pezizomycetes	Pezizales	Tuberaceae	Tuber
				Pezizaceae	Piziza
		Sordariomycetes	Incertaesedis	Glomerellaceae	Colletotrichum
		Leotiomycetes	Helotiales	Vibrisseaceae	Phialocephala

Table S3. Orchid mycorrhizal fungal (OMF) OTUs^a detected by primer pairs ITS3/ITS4OF and IT86F/ITS4 and their frequency of association^b with the different orchid species studies (*Habenaria davidii*, *Habenaria fordii*, *Habenaria petelotii* and *Habenaria limprichtii*).

OUT identity based on Genbank match (Phylum-Family-OUT N°)	Genbank Accession	<i>H. davidii</i>		<i>H. fordii</i>		<i>H. petelotii</i>		<i>H. limprichtii</i>		Sequences
		Individuals (X/10)	Association (%)	Individuals (X/10)	Association (%)	Individuals (X/10)	Association (%)	Individuals (X/10)	Association (%)

^a OTUs were calculated at 3% sequence dissimilarity. Only OTUs representing fungal taxa described as OMF in the studied orchid species (Table S2) were included.

^b OUT frequencies of association% = The sequence of an OUT in a species/Total sequences of the OUT*100.

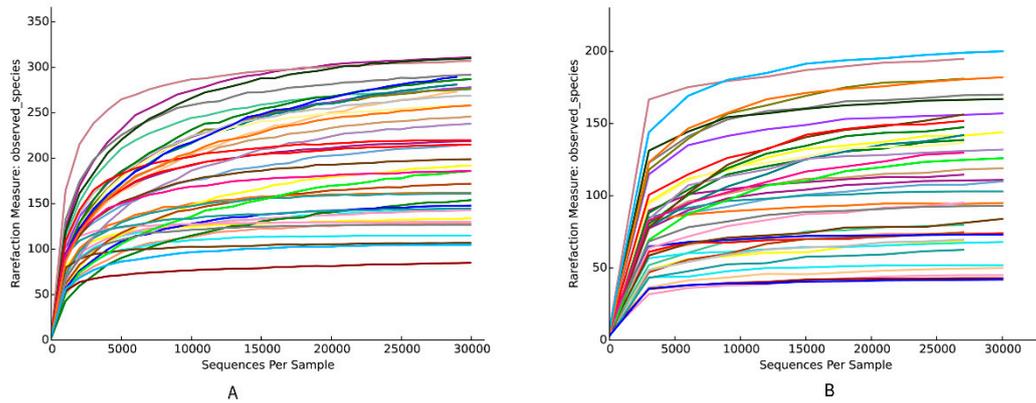

Figure S1. Rarefaction curves of fungal OTU (operational taxonomic unit) richness in the four *Habenaria* species with difference primer pairs. (A) ITS3/ITS4OF and (B) ITS86F/ITS4.

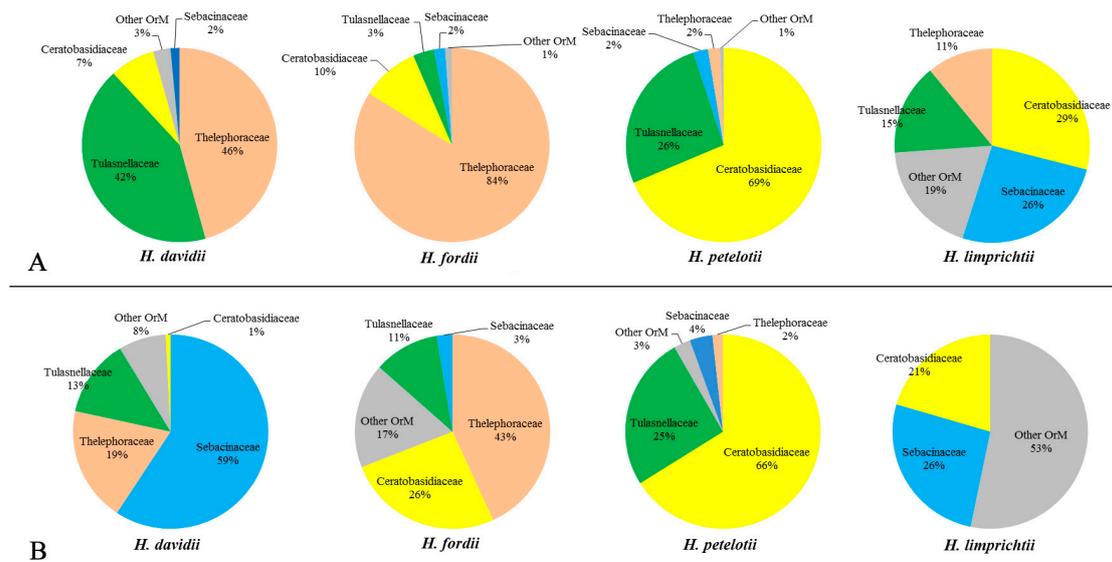

Figure S2. Frequency distribution of identified operational taxonomic units (OTUs) of the four most abundant OMF families (Ceratobasidiaceae, Tulasnellaceae, Thelephoraceae and Sebacinaceae) and the other OMF (the other OMF genus described in Table S2) obtained from the roots of the four studied *Habenaria* species using primer pairs (A) ITS3/ITS4OF and (B) ITS86F/ITS4.
