Figures S1: page 2

Table S1: page 3

Figure S1

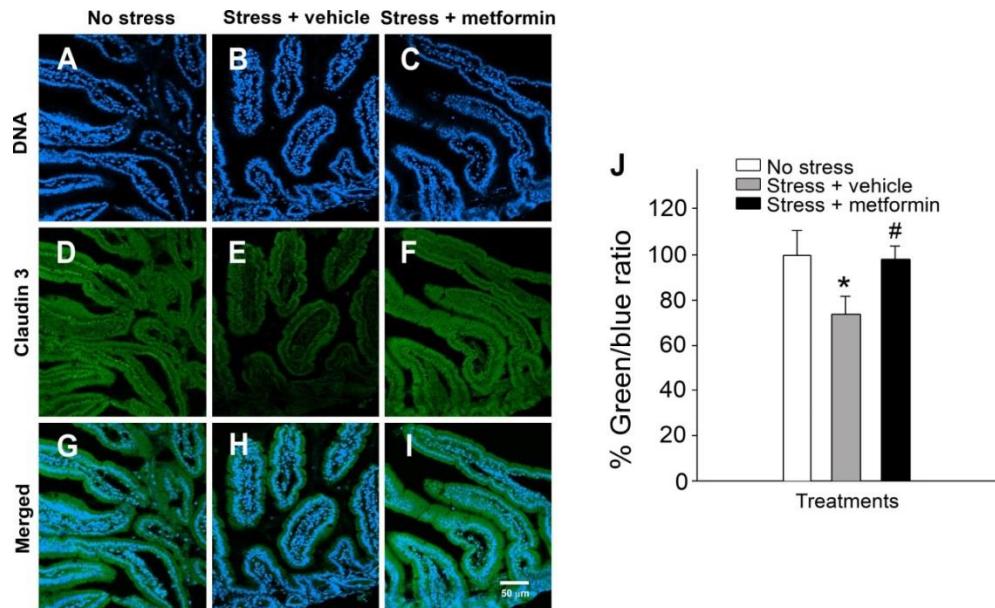

Figure S1. Immunohistochemistry (IHC) staining of GI tight junction protein claudin 3 (CLDN3) visualized through confocal microscopy. (A-I) Representative IHC images of mouse duodenal tissues are displayed. (A-C) DAPI staining shows DNA signals. (D-F) Signals derived from anti-CLDN3 antibody staining. (G-I) Merged signals display DNA and CLDN3. (A, D, G) Images derived from the no stress groups; (B, E, H) images from stress groups treated with vehicle; (C, F, I) Images from stress groups treated with metformin. (J) Quantitative results derived from three images per condition. * $P < 0.05$, compared to the no stress groups; # $P < 0.05$, compared to the vehicle-treated groups. N = 3. To quantify CLDN3 expression, in the merged images, the mean fluorescence intensity of CLDN3 (green) was normalized by dividing it with the mean fluorescence intensity of DNA (blue), which is proportional to the cell number. The average green/blue signal ratio of the no stress groups was normalized to 100 %. Scale bar: 50 μ m.

Table S1**List of primers used in the qRT-PCR analysis of this report**

Gene symbol	Forward primer (5'→3')	Reverse primer (5'→3')	Product size (bp)	Temperatur e (°C)
GAPDH	TCAACAGCAACTC CCACTCTTCCA	ACCCTGTTGCTG TAGCCGTATTCA	115	55
PRKAA1 (AMPK)	GAAACCTGAGAA CGTCCTGC	GCCTGCGTACAA TCTTCCTG	157	54
