Figure S2. List of some typical class-II PRMs targeted by the SH3-containing proteins with relatively low binding affinities. The reported sequence of the class-II PRMs and their binding affinities to the SH3 domains as well as the affinity detection method are summarized.

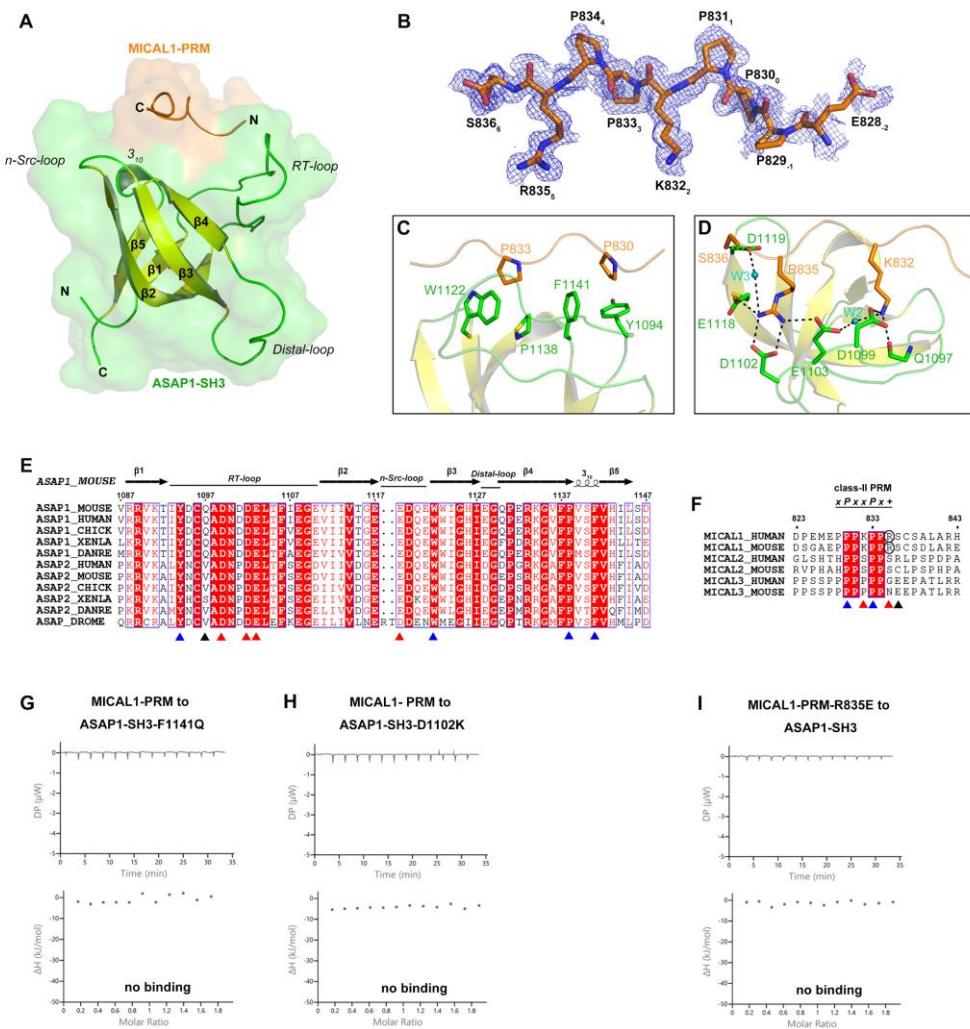

Figure S3. Overall structure of ASAP1-SH3 and MICAL1-PRM complex. **(A)** Crystal structure of ASAP1-SH3 and MICAL1-PRM complex in cartoon mode covered with a transparent surface. The conserved five β -sheets, three loops and a short helix in ASAP1-SH3 are labeled. **(B)** The $F_o - F_c$ map of MICAL1-PRM with its atomic model in stick mode. **(C and D)** The detailed contacts of ASAP1-SH3 and MICAL1-PRM, including the hydrophobic (**C**) and charge-to-charge (**D**) interactions. **(E and F)** Sequence alignments of the SH3 domains in ASAP family proteins (**E**) and the proline-rich regions in MICAL family proteins (**F**). The residues involving hydrophobic, charge-to-charge and hydrogen bonding interactions observed in ASAP1-SH3/MICAL1-PRM structure are labeled by blue, red, and black triangles, respectively. The sequence pattern of class-II PRM is also indicated in **F**. **(G to I)** ITC-based affinity measurements of either mutated ASAP1-SH3 (**G, H**) or mutated MICAL1-PRM (**I**) binding to the wild-type proteins as indicated.

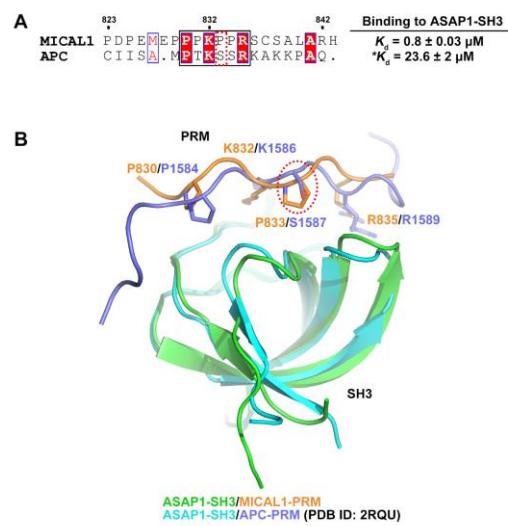

Figure S4. Sequence and structure comparisons of ASAP-SH3 binding to MICAL1-PRM or APC-PRM. (A) Sequence alignment showing the difference PRMs with different affinity binding to ASAP1-SH3. *The reported affinity in another studies. (B) Structural superimposing by aligning their SH3 domain structures. The different residues in MICAL1-PRM and APC-PRM are circled by a red dash line.

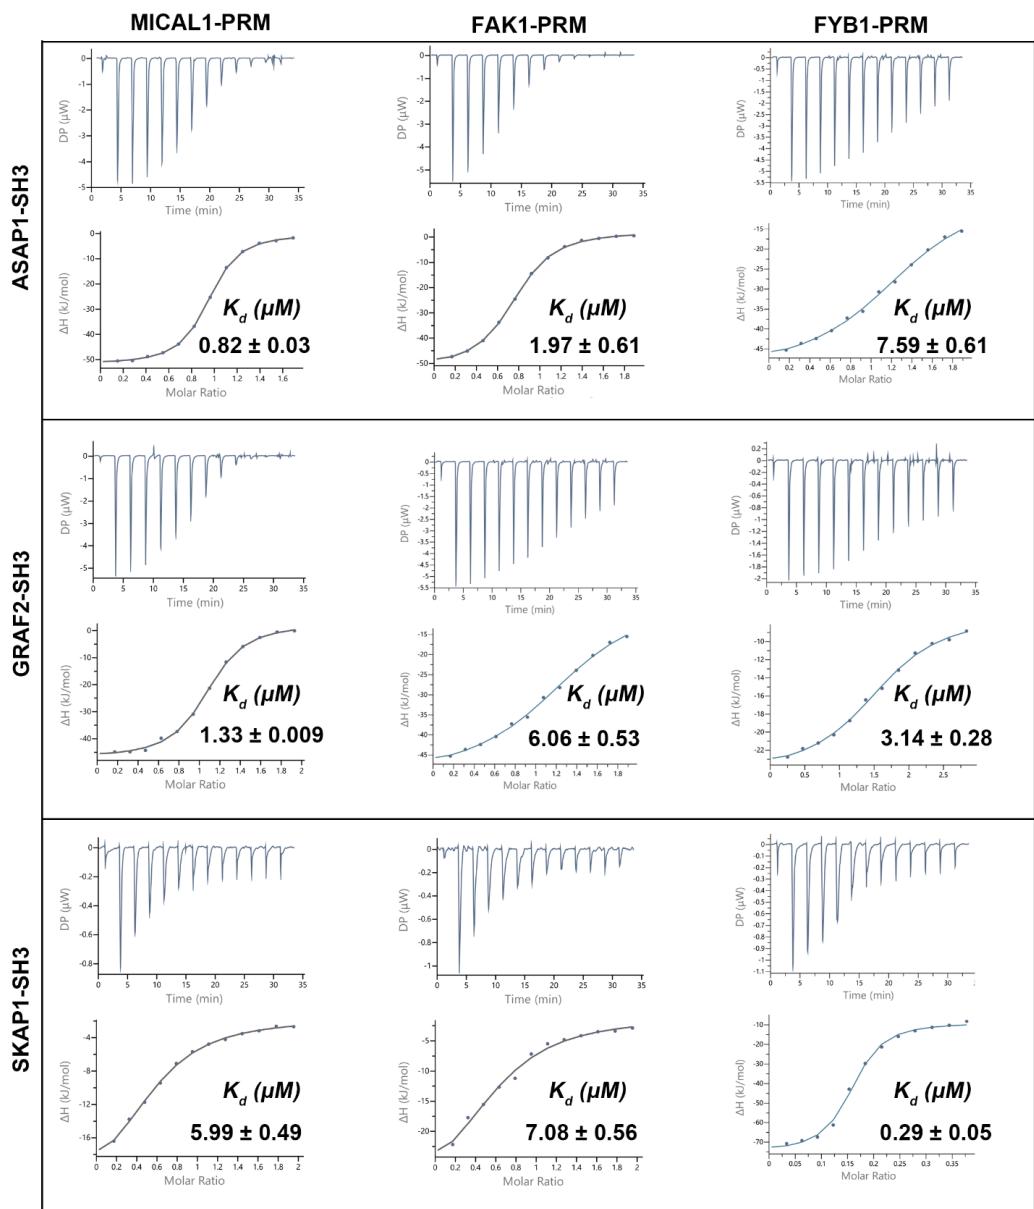

Figure S5. ITC curves showing the interactions between the SH3 domains of ASAP1/GRAF2/SKAP1 and the PRMs of MICAL1/FAK1/FYB1, summarized in Figure3C.

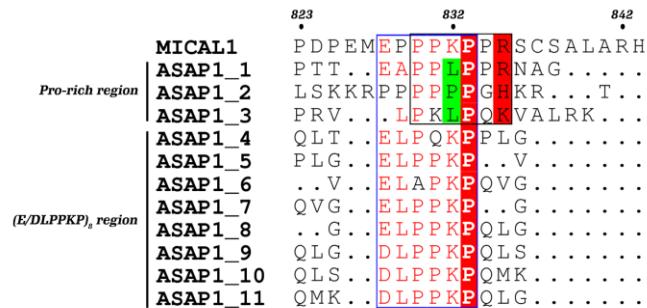

Figure S6. Sequence alignment of the proline-rich region and 8*(E/D)LPPKP region in ASAP1 with MICAL1-PRM. Three typical class-II PRMs can be found in proline-rich region, which contain a hydrophobic residue (green) in the position corresponding K832 of MICAL1-PRM. All eight (E/D)LPPKP motifs is lack of the positively charged residue in the position corresponding R835 in MICAL1-PRM.
