

Supplementary Figure S5: PTPN13 increases sensitivity to apoptosis induced by platinum agents: OVCAR8-FRT and N13-B4 cells (Upper panel), wild type KURAMOCHI and Kura-B1 cells were treated with carboplatin for 1day (d1), 2 days(d2), 3 days(d3) or not treated(C). PARP expression was monitored by western blotting using anti-PARP antibodies. Equal loading was verified by re-probing with an anti-tubulin antibody.
