

Supplementary Figure S1A: Cardiac magnetic resonance imaging of Patient ID 7. Short- axis view. PSIR images shows the presence of subepicardial and midwall LGE in the inferior septum, inferior and posterior wall.

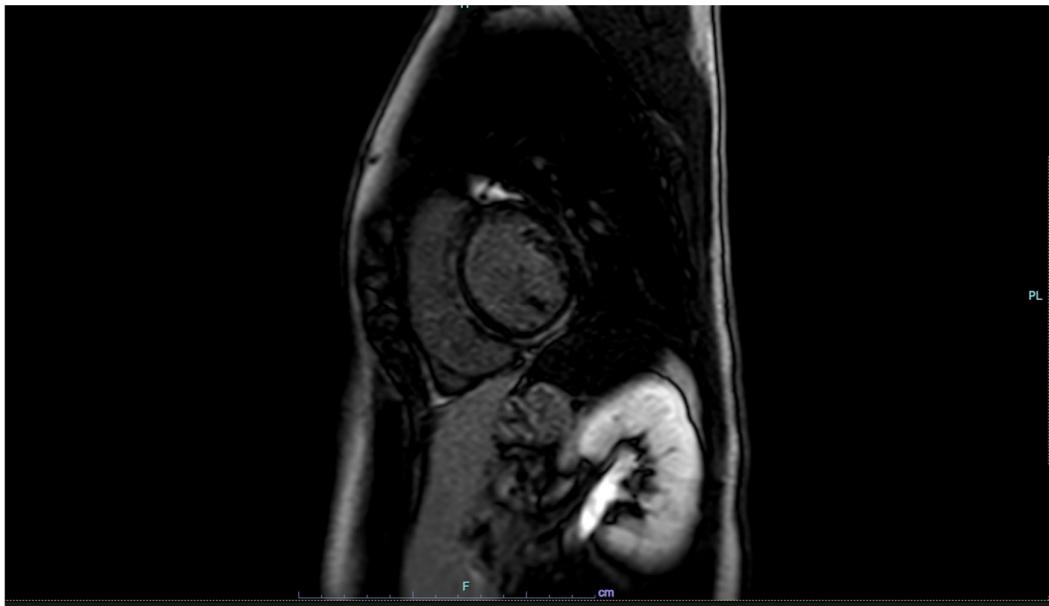

Supplementary Figure S1B: 12-ECG leads of Patient ID 7 shows the presence of pathological Q wave in inferior leads, epsilon-like wave in AVL and low QRS voltages in limb leads.

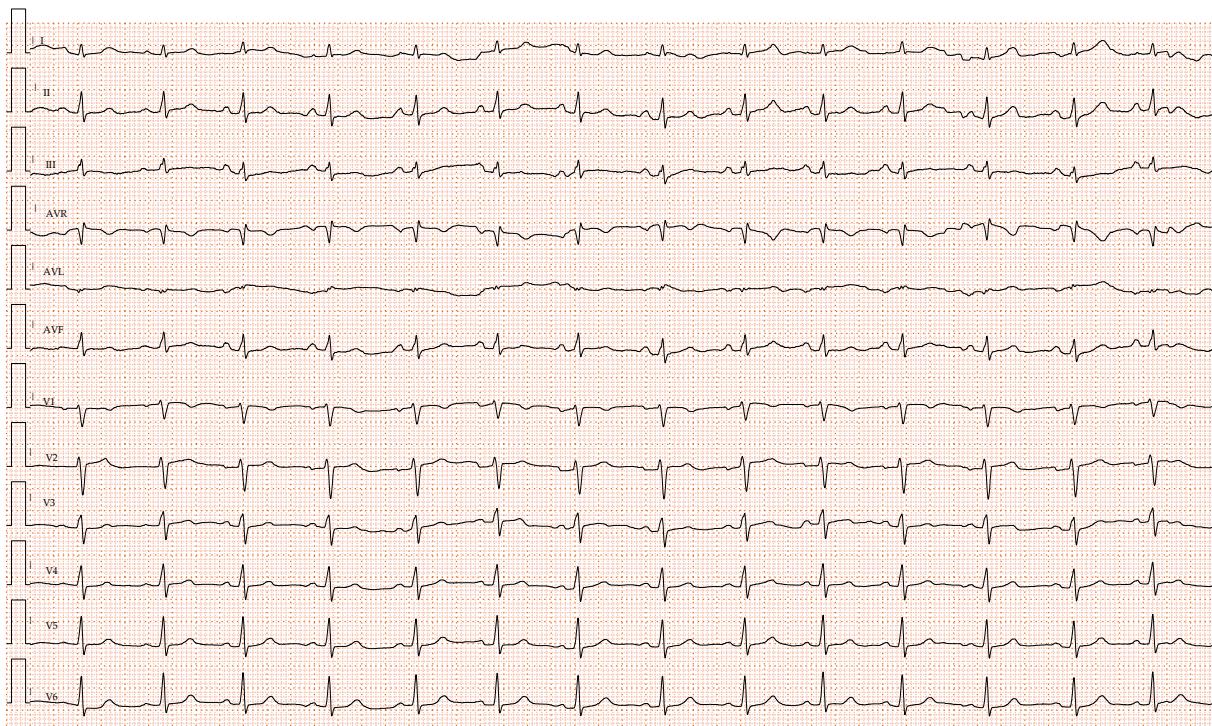

Supplementary Figure S2A: Cardiac magnetic resonance imaging of Patient ID 8. Short- axis view. Ring like pattern LGE involves inferior septum, inferior, posterior and lateral wall.

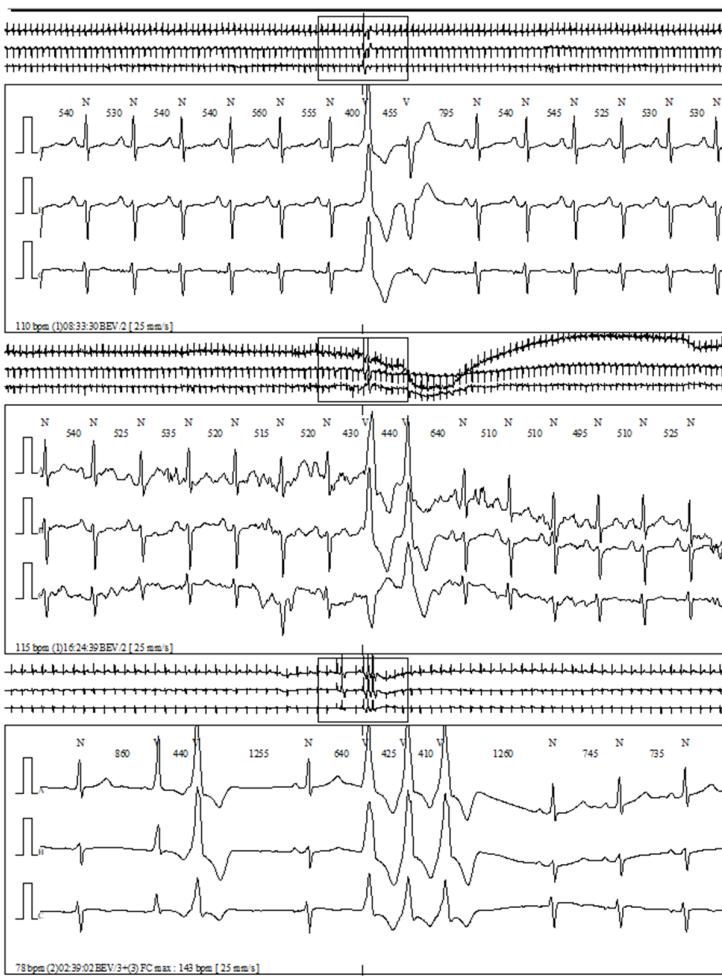

Supplementary Figure S2B: 12-ECG leads of Patient ID 8 shows the presence of low QRS voltages in limb leads and T waves inversion in V5-V6.

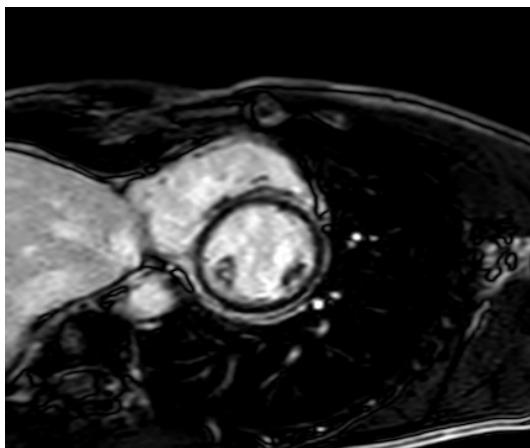

Supplementary Figure S3A: Cardiac magnetic resonance imaging of Patient ID 9. Short- axis view. PSIR images shows ring like LGE pattern involving anterior, septal and inferior wall.

Supplementary Figure S3B: 12-ECG leads of Patient ID 9 shows low QRS voltages (<0.5 mV, peak to peak) in DI, aVL in absence of other repolarization and depolarization ECG abnormalities.

Supplementary Figure S3C: premature ventricular beats in couplets and monomorphic triplets in 24 hours ECG monitoring of Patient ID 9.

Supplementary Figure S4: Cardiac magnetic resonance imaging of Patient ID 10: Short- axis view. PSIR images shows LV subepicardial ring like LGE pattern.
