

Supplementary Materials

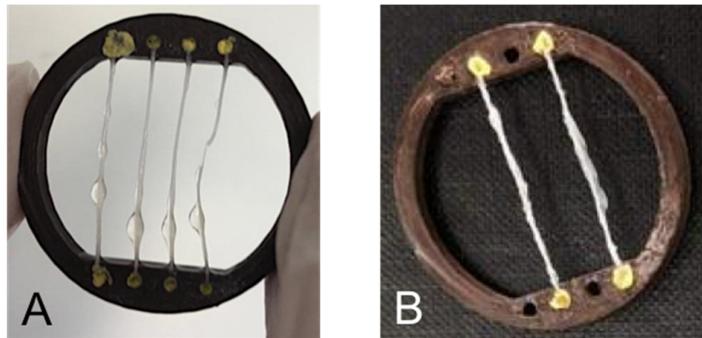

Figure S1. Collagen coating optimization. To obtain a uniform layer of collagen around the yarns, different formulations were tested. (A) Human collagen (Sigma-Aldrich, USA) + 10 U human transglutaminase (Zedira GmbH, Germany); (B) Bovine collagen (PureCol EZ Gel solution, 5074, Sigma-Aldrich, USA) + 10 U transglutaminase (Zedira GmbH, Germany). Yarns were coated with 100 µL of the collagen solutions and then incubated for 1 h at 37 °C under humidified conditions to allow gelation of the solution.

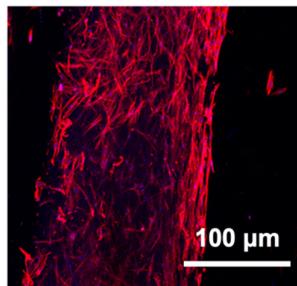

Figure S2. hASCs encapsulated in collagen-coated yarns after 3 days of culture. Cells were stained with Phalloidin-Rhodamine (cytoskeleton, red) and DAPI (nuclei, blue).

Table S1. Primer sequences used for RT-qPCR analysis.

Gene	Primer Sequence	Accession Number
Housekeeping Genes		
<i>GAPDH</i>	F: TGCACCACCAACTGCTTAGC R: GGCATGGACTGTGGTCATGAG	NM_33197
