

Original Western Blots (corresponding to Figure 7A in the main article). Chemiluminescence was detected using the Amersham ECL kit (Amersham, Buckingham, UK) and the Uvitec Alliance 6.7-01 Western Blot imaging system (Uvitec, Cambridge, UK).

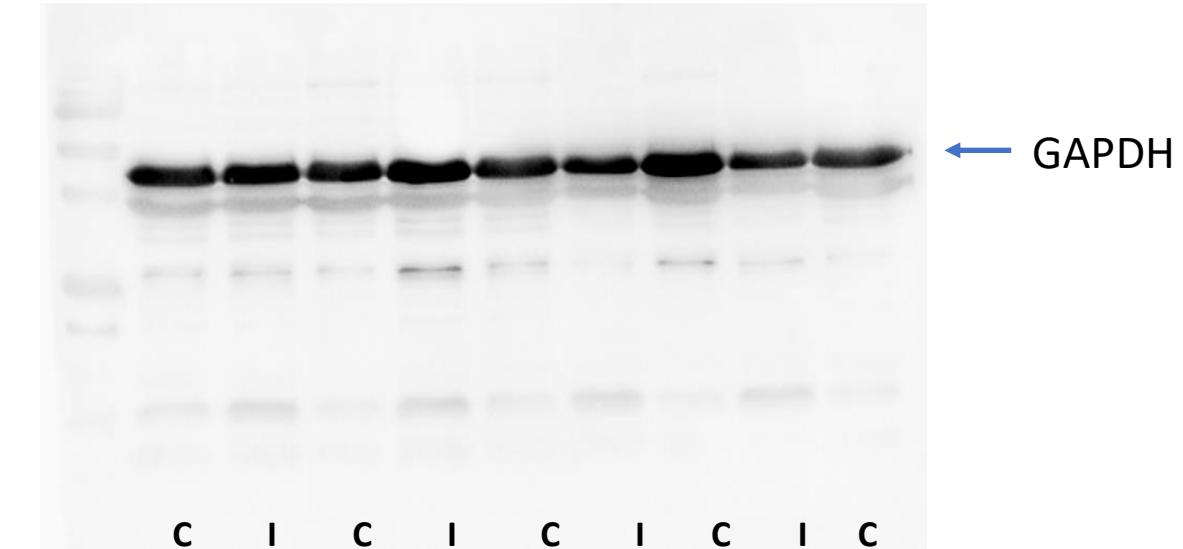

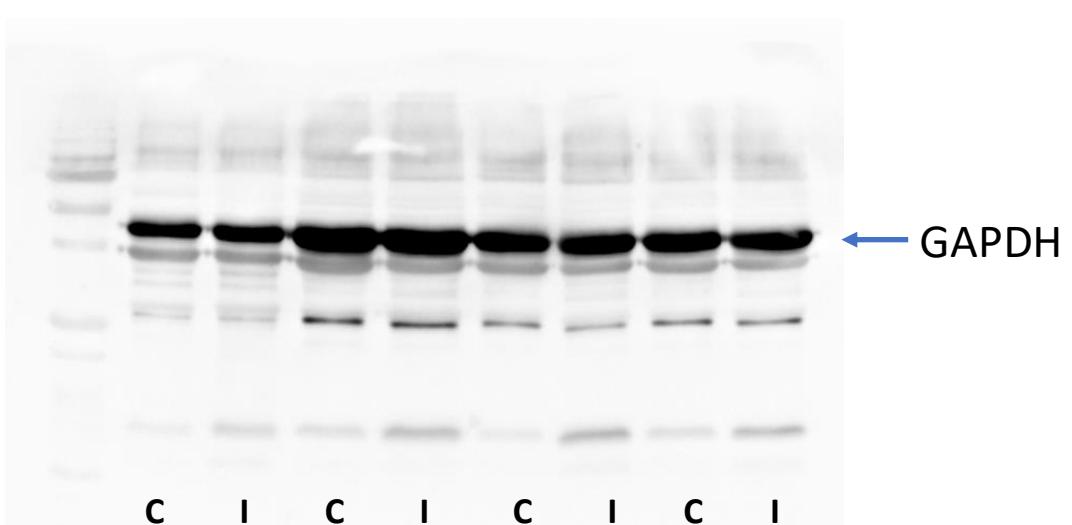

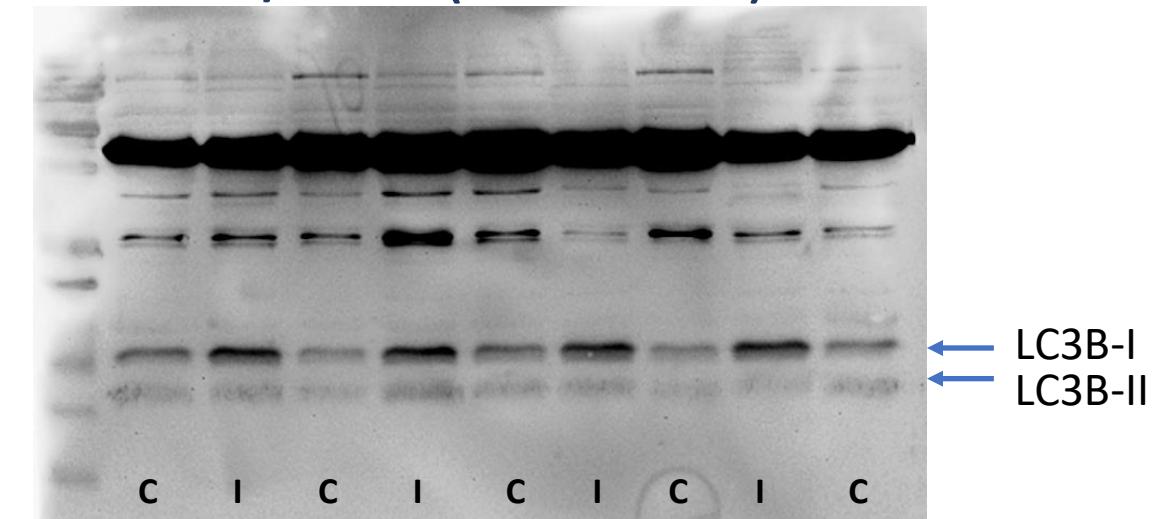

The top membranes were probed for Beclin-1 (Cell Signaling 3738S; Dilution 1:1000), the lower membranes for GAPDH (Antibody: Abcam Ab181602 ; Dilution 1: 40.000). Sample order is as shown at the bottom of the membrane (C=contra; I=Ipsi).
