# Dental Materials Selection for Additive Manufacturing of Polymer Removable Complete Dentures

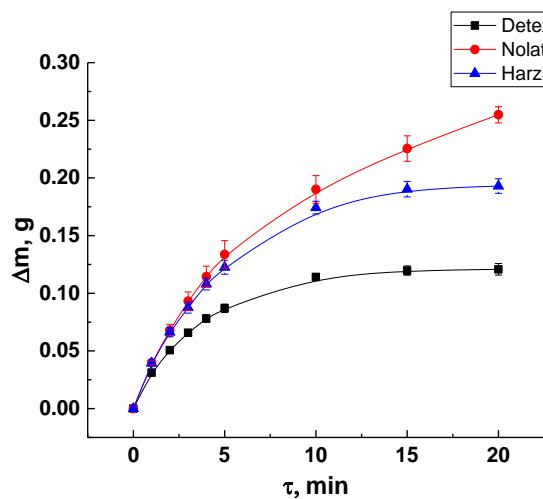

Supplementary materials

**Figure S1.** Time dependences of the CoF values for FP (a), NT (b), DS (c); the point tribological contact.

**Figure S2.** Time dependences of the CoF values for FP (a), NT (b), DS (c); the linear tribological contact.

**Figure S3.** Time dependences of the PMMA (abrasive) weight loss. The flat tribological contact.

**Table S1.** The material indices calculated as the ratio of the mechanical properties to the feedstock cost.

| Material | Flexural modulus | Flexural strength | Flexural strain |
|----------|------------------|-------------------|-----------------|
| FP       | 0.7              | 23.8              | 0.7             |
| NT       | 1.3              | 20.5              | 0.7             |
| DS       | 0.6              | 25.7              | 1.3             |

**Table S2.** The material indices calculated as the ratio of the biological properties to the feedstock cost.

| Material | Normal | Periodontopathogenic | Fungal |
|----------|--------|----------------------|--------|
| FP       | 0.2    | 0.1                  | 0.1    |
| NT       | 0.3    | 0.2                  | 0.25   |
| DS       | 0.1    | 0.1                  | 0.08   |

**Table S3.** The material indices calculated as the ratio of the tribological properties to the feedstock cost.

| Material | Wear rate, point contact | Wear rate, linear contact | (Abrasive) weight loss, flat contact |
|----------|--------------------------|---------------------------|--------------------------------------|
| FP       | 3.5                      | 0.3                       | 0.031                                |
| NT       | 13.3                     | 0.4                       | 0.12                                 |
| DS       | 6.9                      | 0.4                       | 0.047                                |

**Table S4.** The material indices calculated as the ratio of the technological properties to the feedstock cost.

| Material | Average duration of 3D printing and post-build polymerization processing | Roughness after stand- ard polishing | Shape distortion after 3D printing (quality) |
|----------|--|--------------------------------------|--|
| FP       | 16.5   | 0.126                                | 0.26   |
| NT       | 43.3   | 0.241                                | 0.98   |
| DS       | 27.2   | 0.126                                | 0.25   |

**Table S5.** The ranks obtained by the extended VIKOR method according to the criteria within the groups. The estimated *S*, *R* and *Q* values within the groups.

| No.                   | Alternative | S                | R                | Q (v=0.5)        | Rank |
|-----------------------|-------------|------------------|------------------|------------------|------|
| Mechanical            |             |                  |                  |                  |      |
