

Supplementary Material

Figure S1. Anti-dCol3 in different cancer stages. Anti-dCol3 levels were measured in 223 patients with stage I (n=7), II (n=49), III (n=93) or stage IV cancer (n=74). Statistical differences were analyzed using the Kruskal-Wallis test adjusted for Dunn’s multiple comparisons tests.

Figure S2. Standard curve. Anti-dCol3 levels were calculated based on a standard curve using a 5-parameter logistic curve fit $y = a + \frac{(b - (a))}{((1 + (x/c)^d))^e}$.
