

## Supporting Information

*OsLPR5* encoding ferroxidase positively regulates the tolerance to salt stress in rice

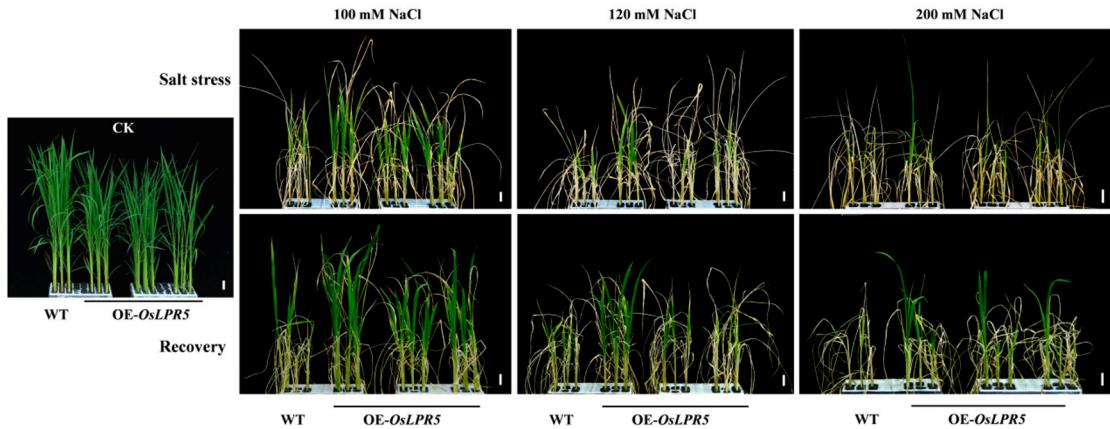

Figure S1. Overexpression of *OsLPR5* enhances the salinity tolerance of rice at the seedling stage exposed to 100, 120 and 200 mM NaCl stress for 7 days (Scale bars, 2 cm).

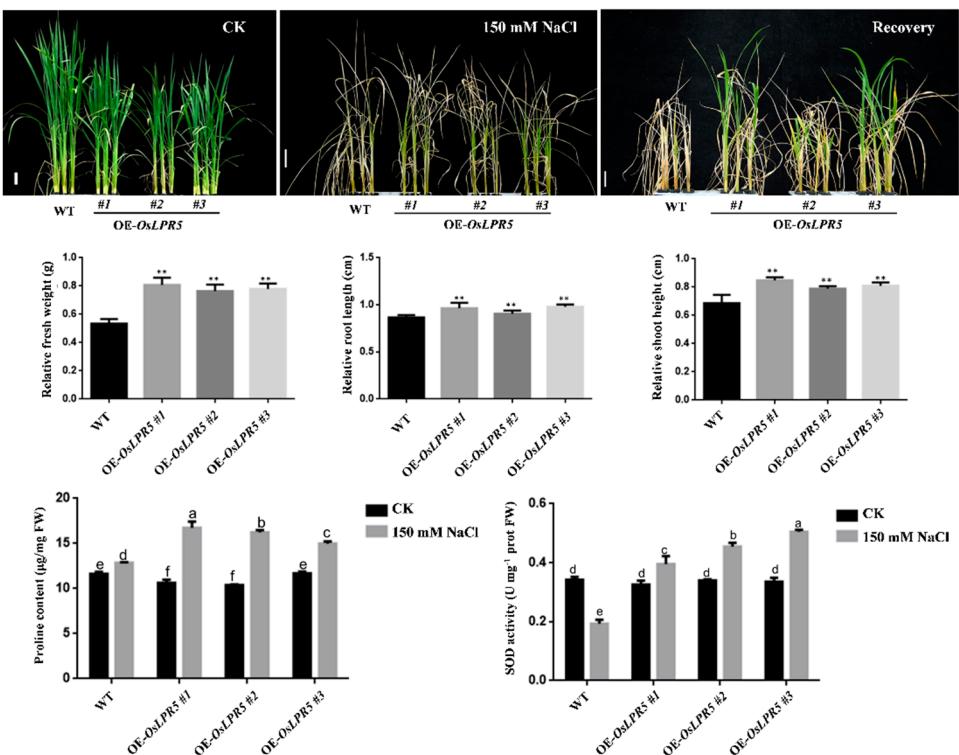

Figure S2. Overexpression of *OsLPR5* enhances the salinity tolerance of rice at the seedling stage exposed to 150 mM NaCl stress for 7 days (Scale bars, 2 cm). Different letters indicate significant differences between means as determined using ANOVA followed by Duncan's test ( $P<0.05$ ).

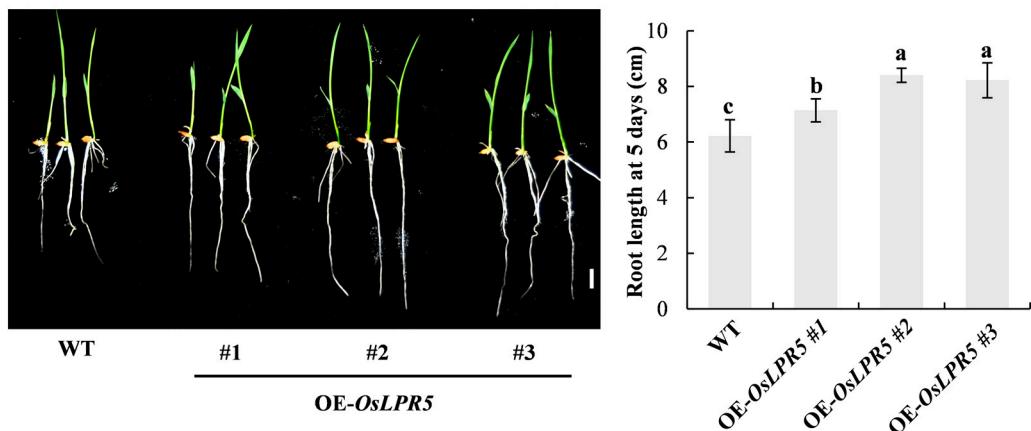

Figure S3. Overexpression of *OsLPR5* promotes the length of the primary after germination and growth for 5 days compared with wild type (WT) (Scale bars, 2 cm). Different letters indicate significant differences between means as determined using ANOVA followed by Duncan's test ( $P<0.05$ ).

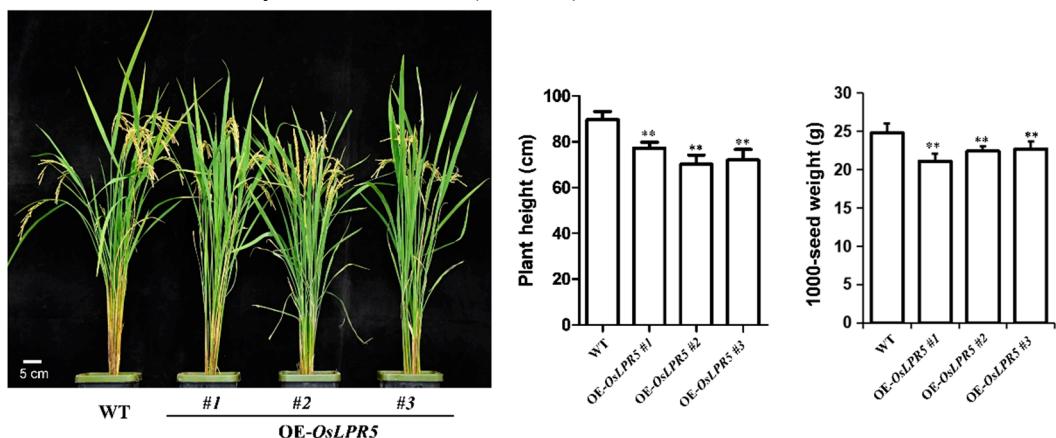

Figure S4. The photograph, plant height and 1000-grain weight of wild type and *OsLPR5* overexpressed plants in the mature stage. Asterisk represents statistical difference at  $**P < 0.01$  by t-test.

Table S1. Primers used for vector construction and qRT-PCR.

Primer	Sequence (5'-3')
OsLPR5-RT-F	CGAGGGATTCCAGGTGTTCAAG
