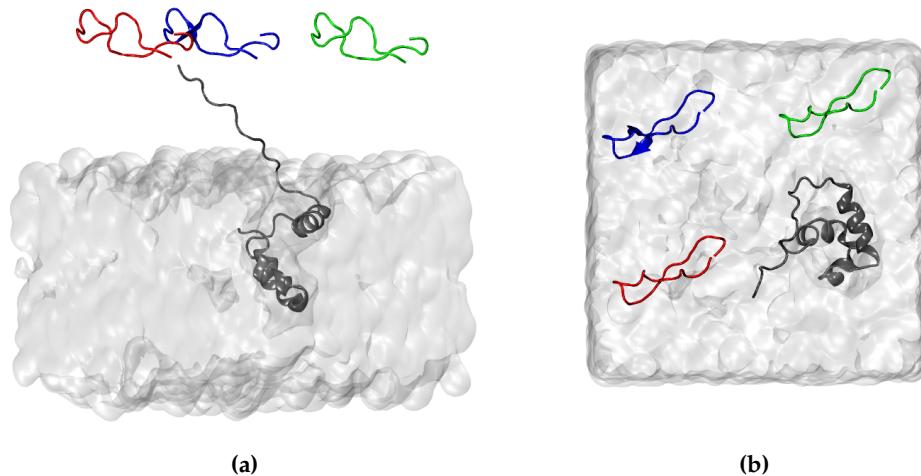

Figure S1. (a) side view and (b) top view of the input configuration of an ORF6 protein, embedded in a model ER membrane and three CT-hIFN γ peptides. ORF6 is depicted in dark gray, CT-hIFN γ -1 to CT-hIFN γ -3 are shown respectively in red, blue, and green. The ER membrane is in light gray surface representation.

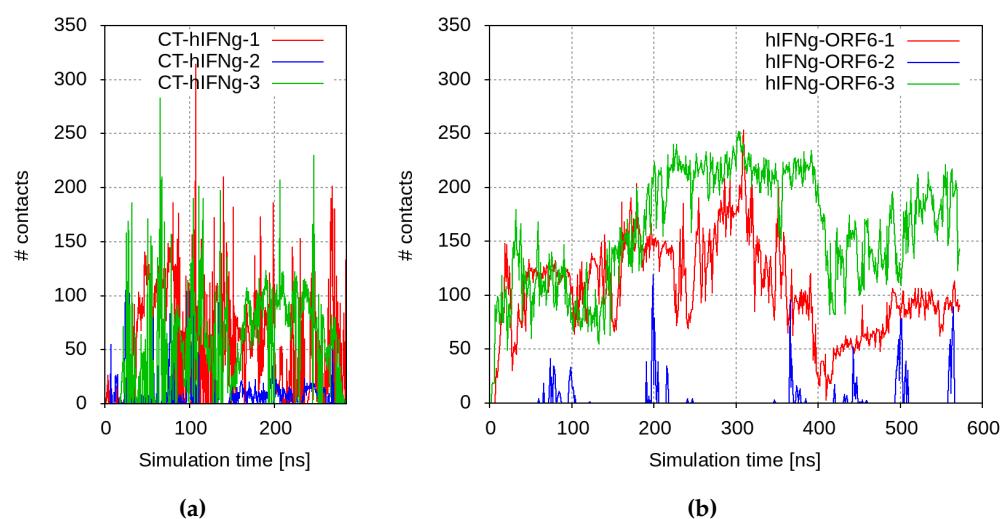

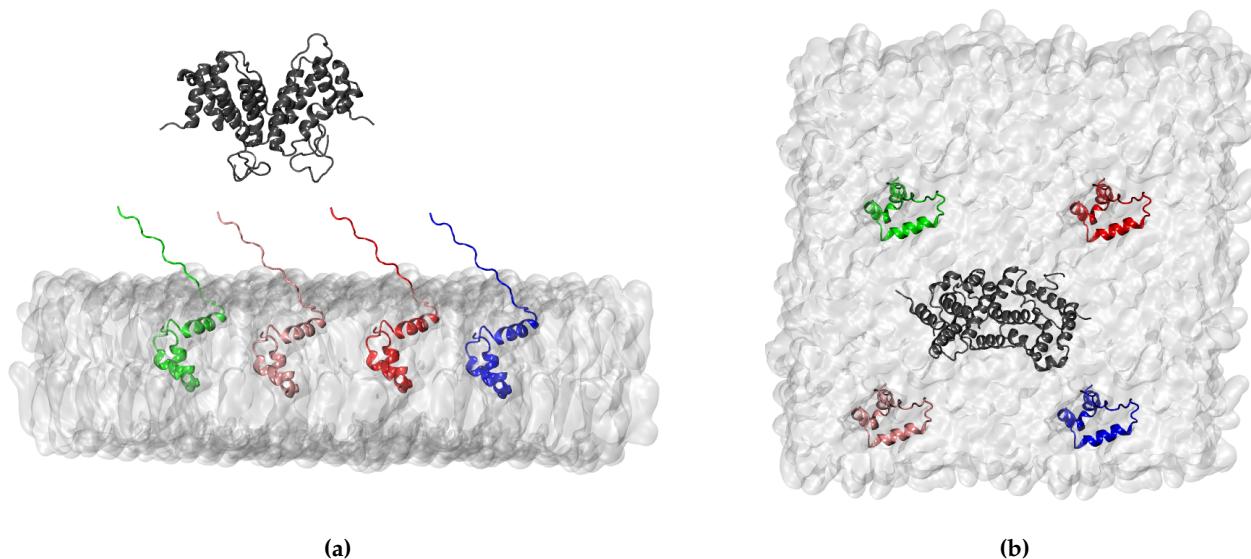

Figure S2. Number of contacts between (a) ORF6 and the CT-hIFN γ peptides; and (b) hIFN γ and the ORF6 proteins.

Figure S3. (a) side view and (b) top vie of the input configuration of a full-length hIFN γ homodimer, placed above 4 ORF6 proteins, embedded in a model ER membrane. hIFN γ is depicted in dark gray, ORF6-1 to ORF6-4 are shown respectively in red, blue, green, and pink. The ER membrane is in light gray surface representation.

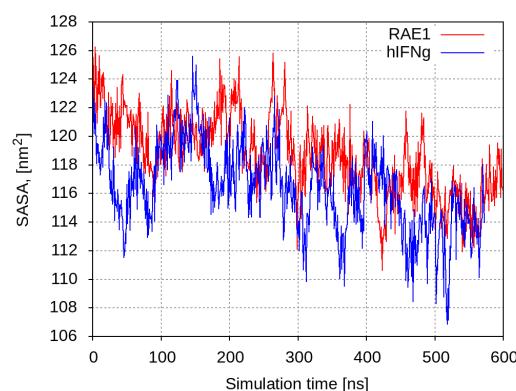

Figure S4. Evolution of the SASA of four ORF6 proteins when interction with RAE1 [1] or hIFN γ .
