Table S1. The table shows the parameter estimates of the multiple regression analysis for MVPA activity among men and women. The MVPA was analysed with absolute 3.0 MET threshold using both 6 s epochs and smoothed 1 and 6 min EMA. Natural logarithm of the accumulated MVPA time for different bout length was used as dependent variable. Age group (1 for 20–29; 2 for 30–39; 3 for 40–49; 4 for 50–59; 5 for 60–69) was used as a covariate and CRF third as a fixed factor.

a This parameter is set to zero because it is redundant; EMA, exponential moving average; CRF cardiorespiratory fitness.

Table S4. The table shows the parameter estimates of the multiple regression analysis for VPA activity among men and women. The MVPA was analysed with relative 40% of VO_{2R} threshold using both 6 s epochs and smoothed 1 and 6 min EMA. Natural logarithm of the accumulated MVPA time for different bout length was used as dependent variable. Age group (1 for 20–29; 2 for 30–39; 3 for 40–49; 4 for 50–59; 5 for 60–69) was used as a covariate and CRF third as a fixed factor.

Bout	Variables	Women						Men					
		6 s epoch		1 min EMA		6 min EMA		6 s epoch		1 min EMA		6 min EMA
