Contents:

Supplementary Table S1: Binding energies of all 514 bioflavonoids with the KRAS G12D mutant protein.

Supplementary Table S2: Kinase targets of top 4 lead flavonoids.

Supplementary Figure S1: Binding poses and molecular interactions of BI-2852 in crystallized and docked forms.

Supplementary Figure S2: Binding energies of BI-2852 and top 4 lead flavonoids against KRAS G12D mutant protein.

Supplementary Table S1: Binding energies of all 514 bioflavonoids with the KRAS G12D mutant protein. The binding energy (Kcal/mol) of all the compounds were tabulated according to their higher negative values and the BI-2852 was shown in bold.

A**B**

KRAS G12D-BI-2852 crystalline

C

KRAS G12D_BI-2852 docked

Supplementary Figure S1: Binding poses and molecular interactions of BI-2852 in crystallized and docked forms. [A] The P-loop (residues 10-17), Switch I (residues 25-40), and Switch II (residues 57-76) were shown in green, blue, and red color respectively, and the crystallized and docked forms of BI-2852 were shown in magenta and bright yellow color respectively. [B] Molecular interactions of BI-2852 in crystallized form. [C] Molecular interactions of BI-2852 in docked form. In both crystallized and docked forms, the Indole group near to the Isatin group of BI-2852 have closer interaction in the SI/II region, and also showed similar type of interactions with the residues of KRAS G12D mutant protein.

Supplementary Figure S2: Binding energies of BI-2852 and top 4 lead flavonoids against KRAS G12D mutant protein.
