

Figure S1: Representative microscopy images of *P. falciparum* Dd2 cultures, incubated or not with different concentrations of inhibitor: at 0.00, control (A); 0.88 (B); 8.80 (C) and 88,00 (D) mol/L of NpCl. Images were obtained from observation of Wright's-stained smears from cultures treated for 48 h with different concentrations of NpCl.
