Supplementary material**Appendix A: Model Inputs****Table S.1: Dwelling occupancy by tenure (2017)**

Tenure	Distribution of dwellings	Number of dwellings	Total number of inhabitants
Owner-occupied	62.4%	14,809,164	34,061,078
Private rented	20.5%	4,865,190	11,189,937
Local authority	6.8%	1,613,819	3,711,784
Housing association	10.3%	2,444,461	5,622,261
Total	100%	23,732,635	54,585,061
Tenure	Non-decent homes	Usable floor area <90m ²	Any damp problem
Owner-occupied	19.7%	46.7%	2.7%
Private rented	26.8%	75.8%	8.2%
Local authority	12.6%	91.2%	6.0%
Housing association	12.6%	88.5%	3.9%

Table S.2: Health condition related model inputs

Condition	Prevalence	Source
Asthma	8.9%	[10]
COPD	2.0%	[11]
Allergic rhinitis	10%	[12]
GAD	4.4%	[13]
Condition	Annual cost	Source
Asthma	£672	[14, 15]
COPD	£1,382	[16]
Allergic rhinitis	£373	[17]
GAD	£911	[13]

Abbreviations: COPD, continuous obstructive pulmonary disease; GAD, generalized anxiety disorder

Table S.3: Cost inputs (asthma and COPD)

Health state (asthma)	Unit costs (weekly)	Exacerbations	Duration of exacerbation (week)	Weeks spent in health state	Source
Controlled	£12.23	N/A	N/A	51.38	[14, 15]
Uncontrolled	£46.61	N/A	N/A	0.50	
Moderate exacerbation	£72.57	0.10	1	0.10	
Severe exacerbation	£669.95	0.01	2	0.02	
Disease severity (COPD)	Prevalence	Monthly cost	Non-severe exacerbation rate (monthly)	Severe exacerbation rate (monthly)	Source
Mild	17.1%	£43.15	0.05	0.01	[16, 18]
Moderate	52.2%	£43.15	0.05	0.01	
Severe	25.5%	£90.55	0.06	0.02	
Very severe	5.2%	£149.53	0.07	0.03	

The weekly cost of asthma was sourced from a NICE technology appraisal for eosinophilic asthma (TA479) [14]. No data were identified on the number of weeks per year an individual with asthma will spend with symptoms of varying severity. The duration of asthma of a severe or moderate exacerbation was sourced from TA479. The average annual number of exacerbations an individual with asthma will have (0.11) was sourced from a retrospective cohort study describing asthma exacerbation frequency and risk [15]. However, this study did not inform the distributional split of these exacerbations between moderate or severe. Therefore, it was assumed that the majority of exacerbations would be moderate (0.1) and only a small proportion severe (0.01). It was assumed that patients would spend 0.5 weeks a year with uncontrolled asthma and would have controlled asthma for the remainder of the year. The number of weeks spent in each health state, per year, was multiplied by the weekly unit cost to generate an annual unit cost per person with asthma of £672 (Table A1).

The proportion of people with COPD at each level of disease severity was sourced from a study informed by a large database of primary care COPD patients in the UK [19]. The monthly costs associated with the treatment of severe and non-severe exacerbations were £4,071 and £129 respectively. These costs were extracted from a cost-utility study of COPD in the UK [16], and were

multiplied by 12 to generate annual costs. A weighted average of these costs, based on the distribution of severity across patients with COPD, was calculated to generate an annual unit cost per person of £1,382 (Table A1). Due to a lack of alternative information, it was assumed that the monthly cost would be equivalent for people with mild and moderate COPD. Similarly, the non-severe and severe exacerbation rates were assumed to be equivalent between those with mild and moderate COPD.

Table S.3: Derivation of five-year discount rate

	Year 1	Year 2	Year 3	Year 4	Year 5	Total
No discounting	1.00000	1.00000	1.00000	1.00000	1.00000	5.00000
Discounting	1.00000	0.96618	0.93351	0.90194	0.87144	4.67308
Ratio						0.93462
