BMI, body mass index; CCI, Charlson comorbidity index; EV, Estimated value; SBP, systolic blood pressure; DBP, diastolic blood pressure

\* Paired t-test, Significance at P < 0.05

\*\* Linear mixed model, Significance at P < 0.05

† Interaction effects between time and group.

‡ Estimated value of linear mixed model for tonsillectomy I group based on the control I group.

§ Fixed effects were age, sex, income, region of residence, tonsillectomy, and time of measurement. Random effects were BMI, systolic blood pressure, diastolic blood pressure, fasting blood glucose, total cholesterol, smoking, alcohol consumption, and CCI scores.

**Table S2.** Difference in mean values of BMI and blood pressure between pre and 2-year post of tonsillectomy in tonsillectomy II and control II group according to obesity
