

Table S1. The comparison of IAQ parameter levels by types of air-conditioning (split-type, centralized type, and both types)

Parameters	F-statistic	p-value
Thermal comfort parameters		
Air temperature)°C(1.102	0.350
Relative humidity)%(1.403	0.267
Air movement)m/s(1.017	0.378
Chemical parameters		
Carbon dioxide)ppm(0.468	0.633
Formaldehyde)ppm(^a	3.449	0.178
Carbon monoxide)ppm(N/A	N/A
TVOC)ppb(N/A	N/A
Particulate matter		
PM2.5) $\mu\text{g}/\text{m}^3$ (2.265	0.128
Biological parameters		
Total viable bacterial count)CFU/ m^3 (0.476	0.628

p-value was obtained by ANOVA test, except ^a non-parametric variable, the statistical analysis was performed using Rank-sum test (χ^2 statistic).
