Figure S1. Schematic representation of the general procedure used for the preparation of M.L.

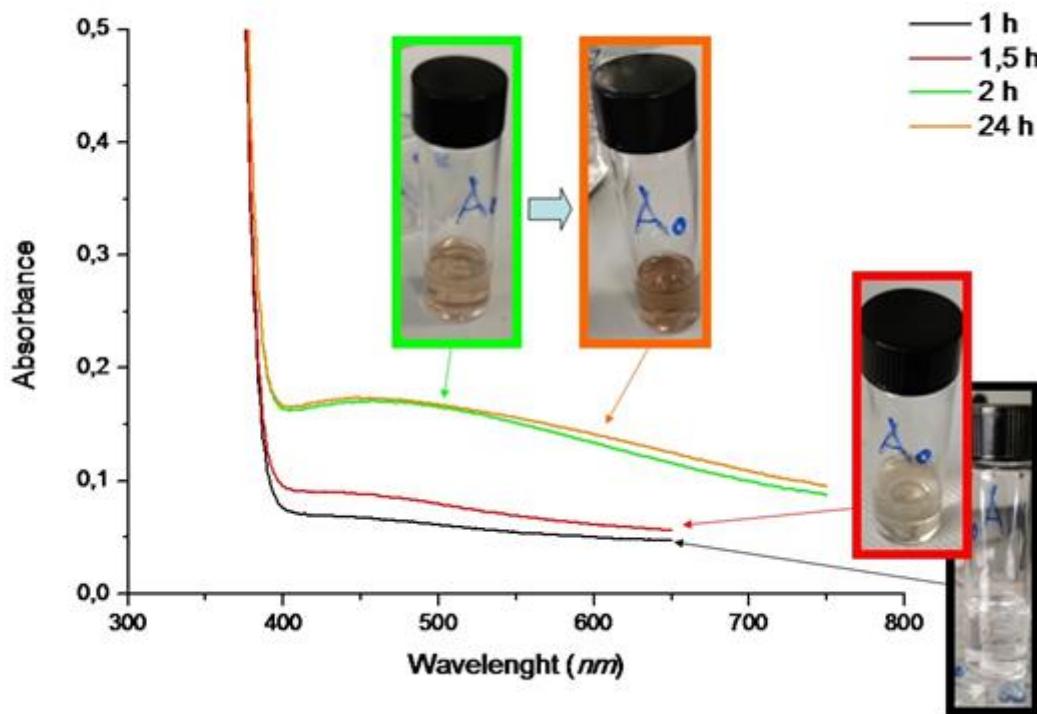

Figure S2. UV Absorption spectra as a function of exposure time to sun light for a M.L.1 sample.

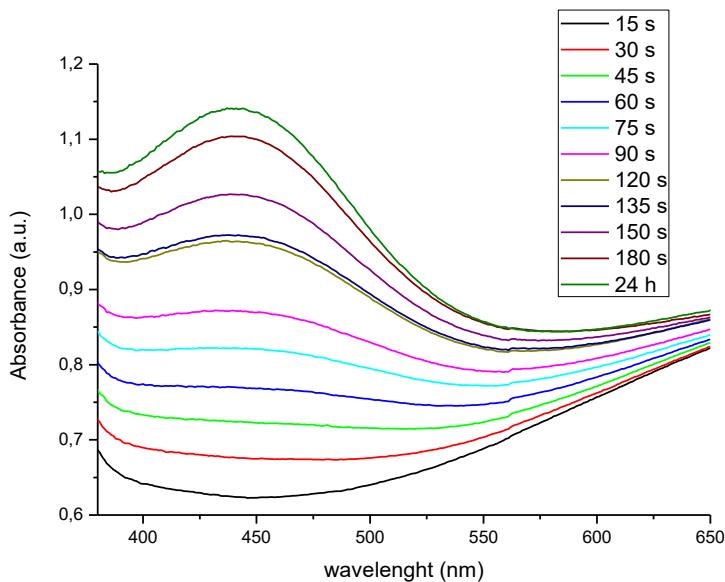

Figure S3. UV Absorption spectra as a function of exposure time to ultraviolet light for a samples at 50mM Ag precursor concentration.

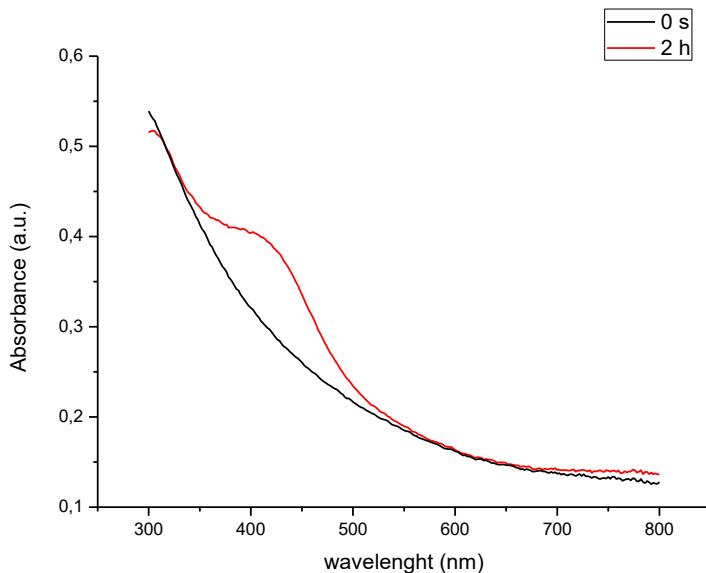

Figure S4. UV Absorption spectra as a function of exposure time to sun light for a film of M.L.5 prepared by spin coating deposition.

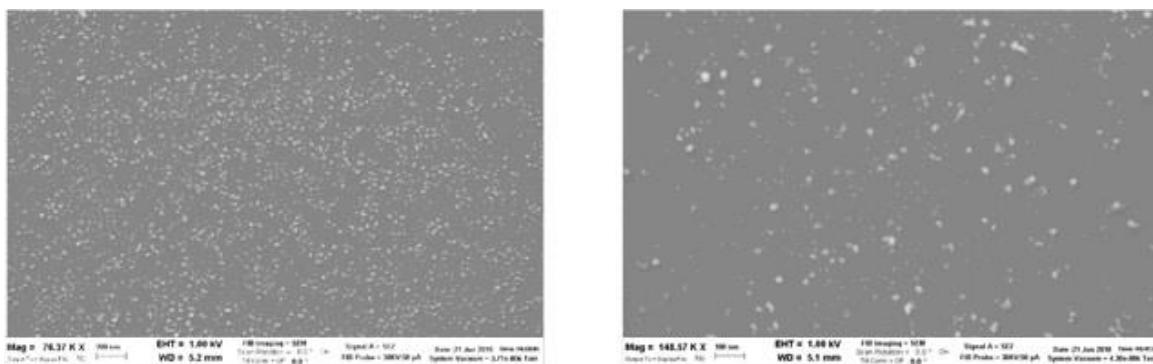

Figure S5. Surface morphology images of a homogeneous film obtained from M.L.1 and deposited by spin-coating at 76 kX (a) and at 148 kX (b) after plasma treatment.

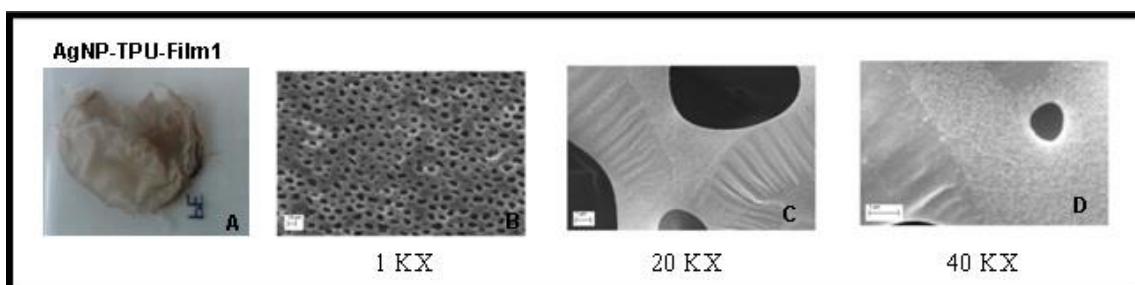

Figure S6. Photographic image of AgNP-TPU-Film1 (A) and surface morphology images of AgNP-TPU-Film1 at 1 kX (B), 20 kX (C) and 40 kX (D).

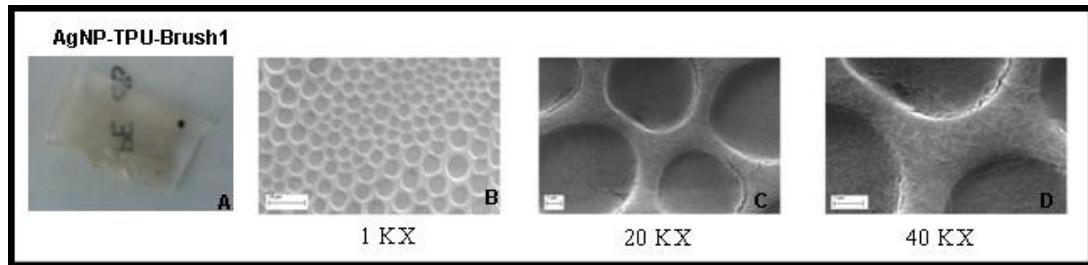

Figure S7. Photographic image of AgNP-TPU-Brush1 (A) and surface morphology images of AgNP-TPU-Brush1 at 1 kX (B), 20 kX (C) and 40 kX (D).

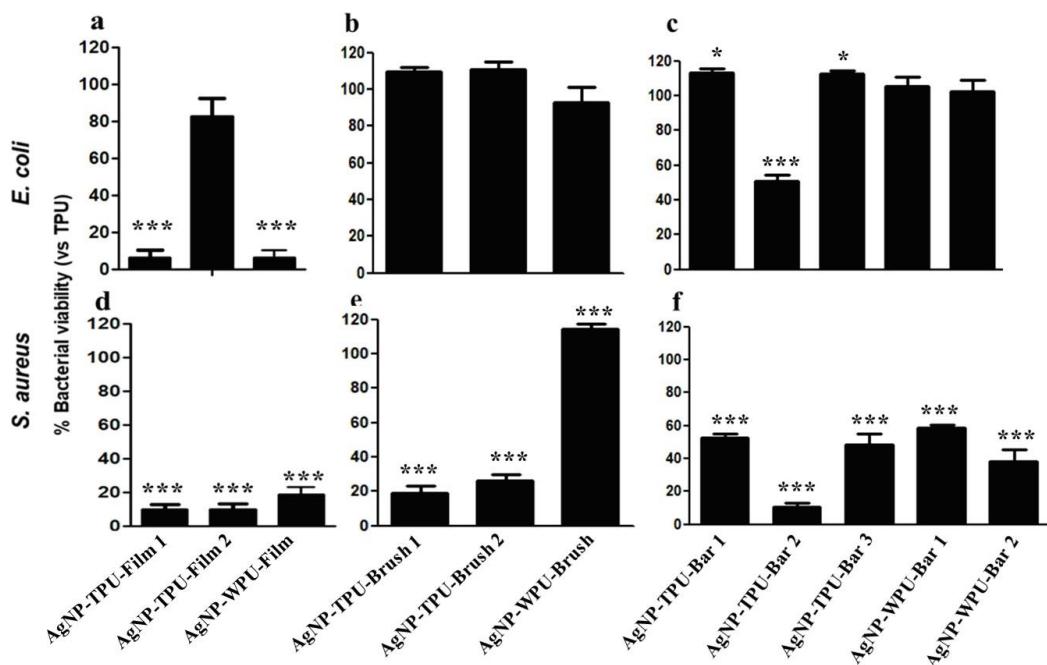

Figure S8. Planktonic bacterial viability through direct contact with materials. Comparison of *E. coli* ATCC 25922 (a-c) and *S. aureus* ATCC 25923 (d-f) viability with TPU set 100% after 6 h of incubation. Bars indicate mean values \pm SD of the mean of results from two experiments. t-student test, statistical significance values were $P < 0.05$ (*) and $p < 0.001$ (***)�.

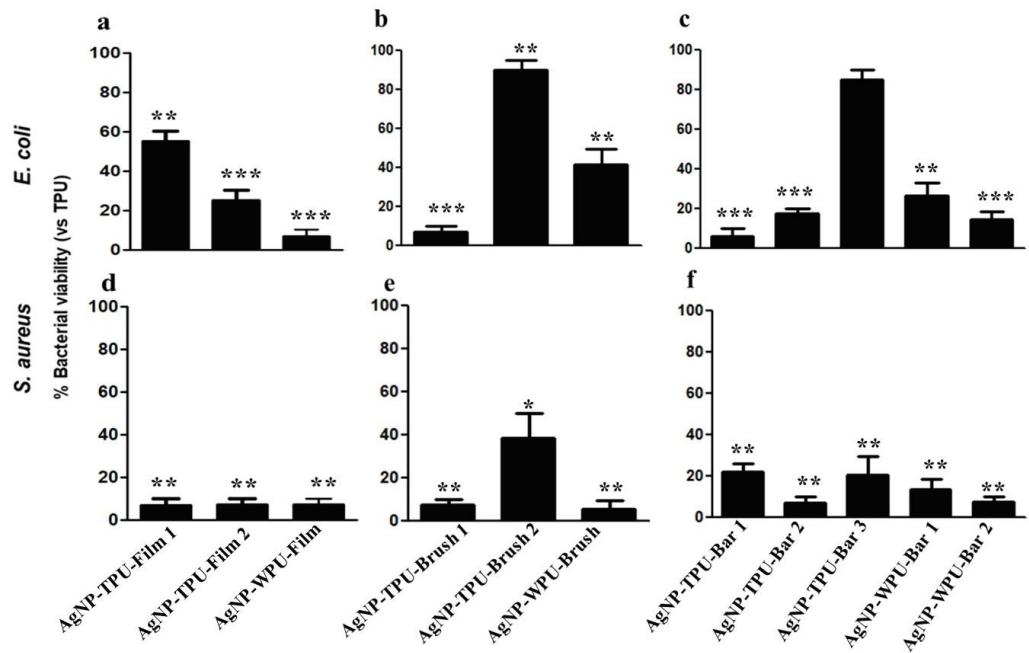

Figure S9. Bacterial adhesion on films through direct contact with materials. Comparison of *E. coli* ATCC 25922 (a-c) and *S. aureus* ATCC 25923 (d-f) viability with TPU set 100% after 6 h of incubation. Bars indicate mean values \pm SD of the mean of results from two experiments. t-student test, statistical significance values were $P < 0.05$ (*), $p < 0.01$ (***) and $p < 0.001$ (****).

Figure S10. SEM images of bacteria adherent on TPU and WPU polymeric films at 3 kX (scale bar 10 μ m). Panel A: *E. coli* (a–d), *S. aureus* (e–h) on TPU and casted films; panel B: *E. coli* (a–d), *S. aureus* (e–h) on brush films; panel C: *E. coli* (a–c; g–i), *S. aureus* (d–f; j–n) on bar coater films.

Table S1. pH values of the different reported samples after 24 h at 37°C measured in physiologic solution and Luria Bertani broth.

	Physiologic solution	pH	Luria Bertani broth
TPU	6		7
AgNP-TPU-Film 1	6		7
AgNP-TPU-Film 2	6		7
AgNP-WPU-Film	6		7
PU-Brush	6		7
AgNP-TPU-Brush 1	6		7
AgNP-TPU-Brush 2	6		8
AgNP-WPU-Brush	6		7
PU-Bar	6		7
AgNP-TPU-Bar 1	6		7
AgNP-TPU-Bar 2	6		7
AgNP-TPU-Bar 3	6		7
AgNP-WPU-Bar 1	6		7
AgNP-WPU-Bar 2	6		7

Figure S11. Photographic image of AgNP dispersed in a CHIT-solution after sun light exposition.

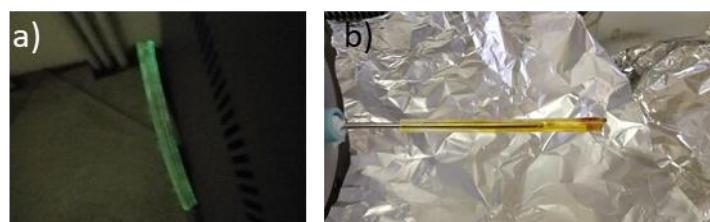

Figure S12. (a) prototype biomedical probe in polyurethane coated with an AgNP / TPU. To make the AgNP / TPU coating (tendentially pink / transparent) visible, a low amount of phosphorescent strontium aluminate was added. (b) prototype biomedical probe in polyurethane coated with an AgNP / WPU.

Figure S13. TPU-based coatings deposited on polyethylene substrates.
