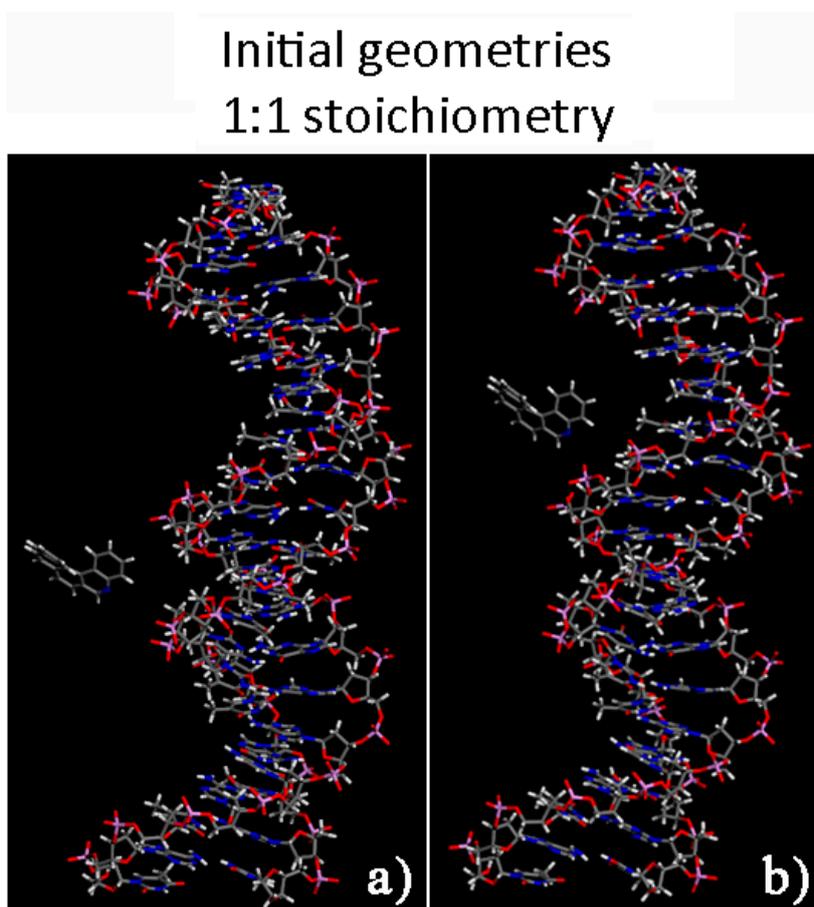

Figure S1. Initial two different non-optimized geometries considered for the (M)-5-aza[5]helicene molecules on the left near the DNA minor groove (panel a), on the right near DNA major groove (panel b). The same geometries not reported here are also considered for the (P)-5-aza[5]helicene enantiomer. The carbon atoms are in grey, the nitrogen's in blue, the oxygens in red, the phosphorus in pink and hydrogens in white.

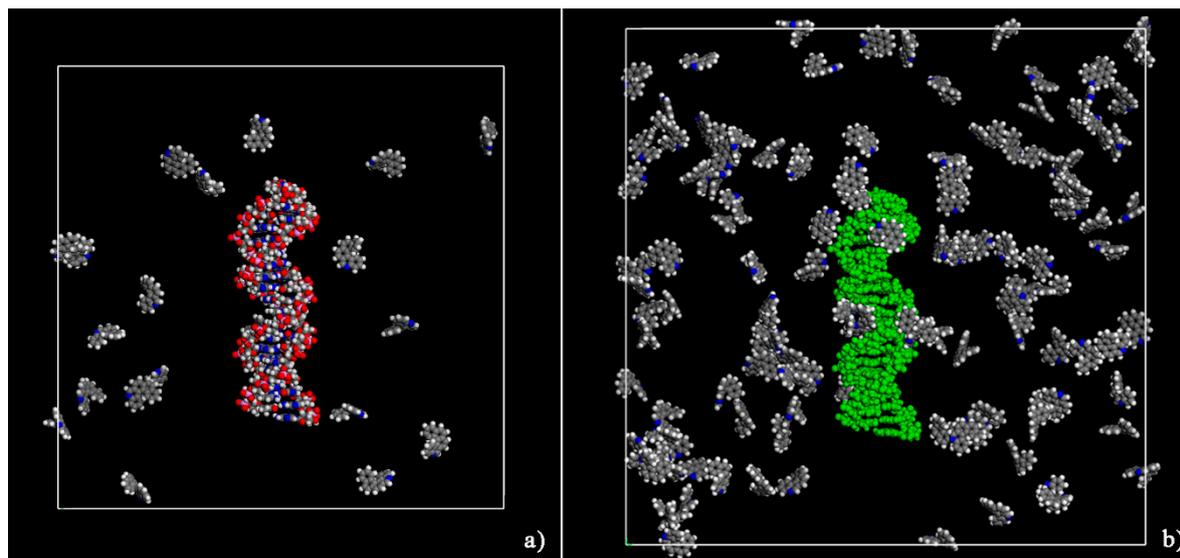

Figure S2. Initial non optimized two different geometries considered for the (*M*)-5-aza[5]helicene on the left (panel a) considering a small concentration (DNA/helicene in 1:20 stoichiometry), on the right considering a larger concentration (DNA/helicene in 1:120 stoichiometry). The same geometries are considered also for the (*P*)-5-aza[5]helicene enantiomer. In the panel b the DNA fragment is colored in green. The color code is the same as in Figure S1.

[DYNAMICS DNA \(P\)-HA 120ns side view.avi](#)

[dyn RACEMIC MIX 10\(M\)-HA 10\(P\)-HA 20ns.avi](#)

[dyn RACEMIC MIX 60\(M\)-HA 60\(P\)-HA 20ns.avi](#)

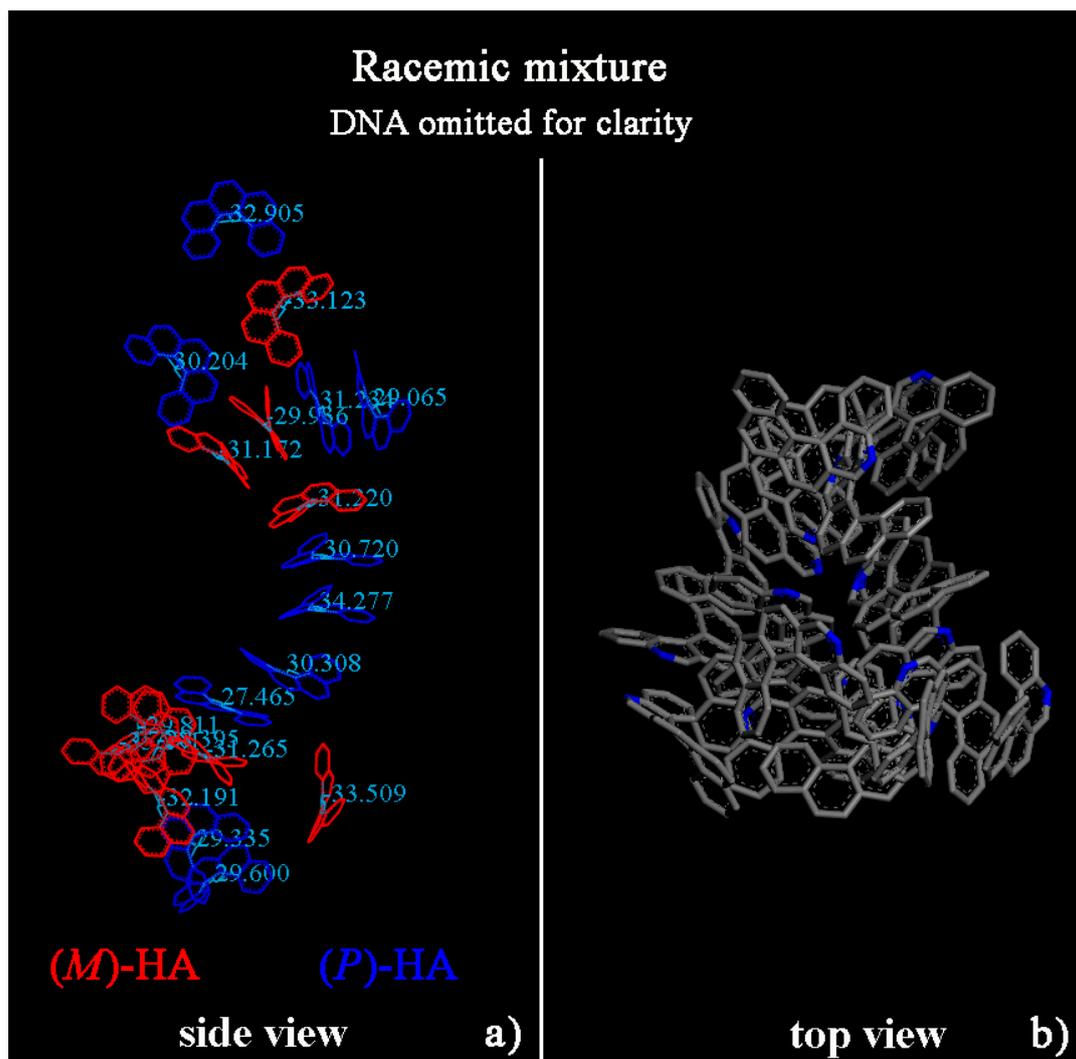

Figure S3. Side view and top view of the optimized geometry of the racemic mixture of twenty enantiomers considering ten molecules of (M)-5-aza[5]helicene reported in red ($\Theta < 0$) and ten molecules of (P)-5-aza[5]helicene reported in blue ($\Theta > 0$) in the side view. In top view the color code is: carbon atoms in grey, nitrogen atoms in blue. The DNA structure and hydrogen atoms are omitted for clarity.
