## 1. Experimental conditions for hot pressed samples

All samples produced using various experimental conditions lists in Table S1.

**Table S1.** Experimental conditions for hot pressed samples

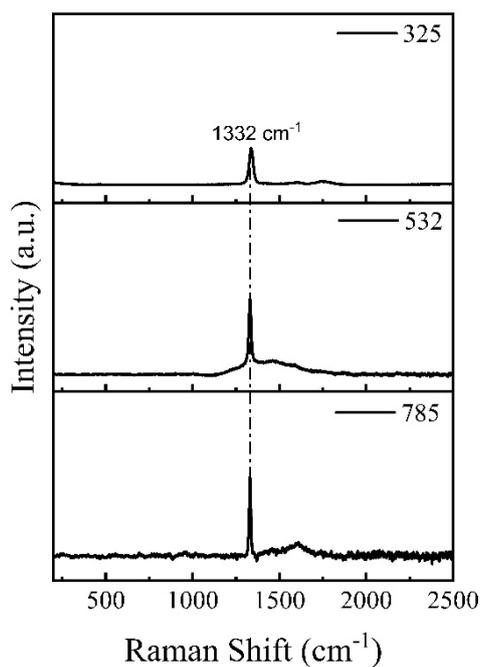

Sample	Hydraulic Pressure (MPa)	Cavity pressure (GPa)	Power (kW)	Temperature (°C)	Particle Size (μm)	Average Particle Size (μm)		
A1	30 MPa	5.3 GPa	4 kW	1023 °C	G2-4	3.1		
B1					G6-12	8.8		
C1					G8-16	13.4		
D1					G15-25	19.7		
E1					G20-30	24.5		
A2			5 kW	1256 °C			G2-4	3.1
B2							G6-12	8.8
C2							G8-16	13.4
D2							G15-25	19.7
E2							G20-30	24.5
A3			6 kW	1494 °C			G2-4	3.1
B3							G6-12	8.8
C3							G8-16	13.4
D3							G15-25	19.7
E3							G20-30	24.5
A4	40 MPa	6.8 GPa	4 kW	1023 °C	G2-4	3.1		
B4					G6-12	8.8		
C4					G8-16	13.4		
D4					G15-25	19.7		
E4					G20-30	24.5		
A5			5 kW	1256 °C			G2-4	3.1
B5							G6-12	8.8
C5							G8-16	13.4
D5							G15-25	19.7
E5							G20-30	24.5
A6			6 kW	1494 °C			G2-4	3.1
B6							G6-12	8.8
C6							G8-16	13.4
D6							G15-25	19.7
E6							G20-30	24.5

## 2. Raman Spectra

**Figure S1.** (a) Original diamond Raman Spectroscopy; (b) Original diamond PL spectrum;

Fig. S1 shows the Raman and PL spectra of the original diamond. This indicates that nitrogen does exist in the original diamond.

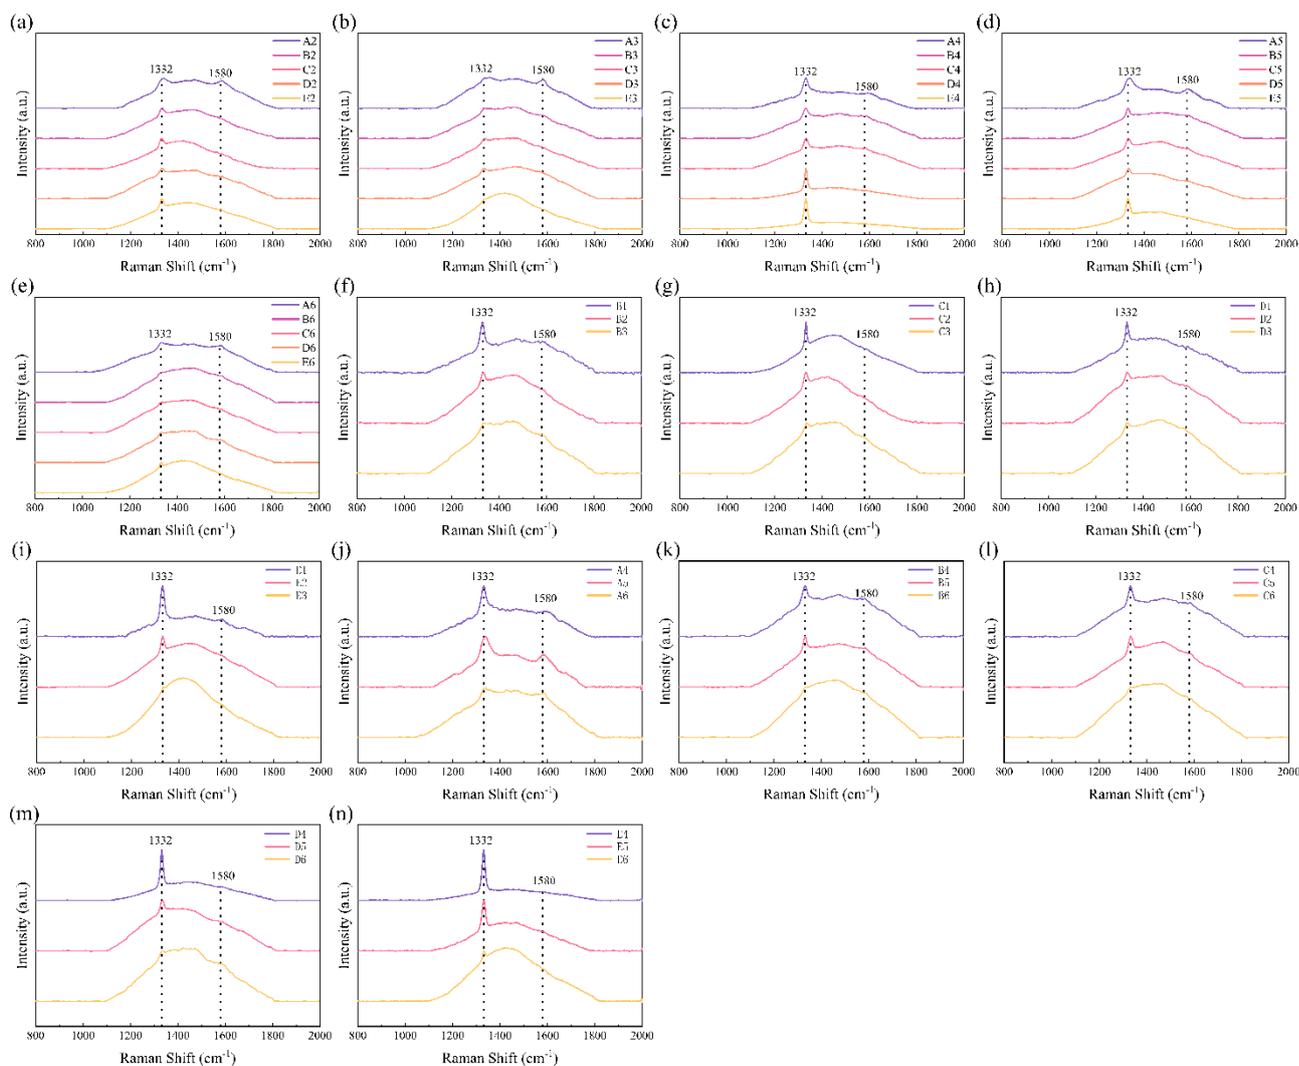

**Figure S2.** Raman spectra of hot pressed diamond with three different wavelengths;

Fig. S2 shows the Raman spectra of diamond samples with three different wavelengths of lasers: 325nm, 532nm, and 785nm. From the graph, it can be seen that there is a diamond peak at 1332cm-1.

The Raman spectra of hot-pressed samples after normalization of the diamond peak were presented in

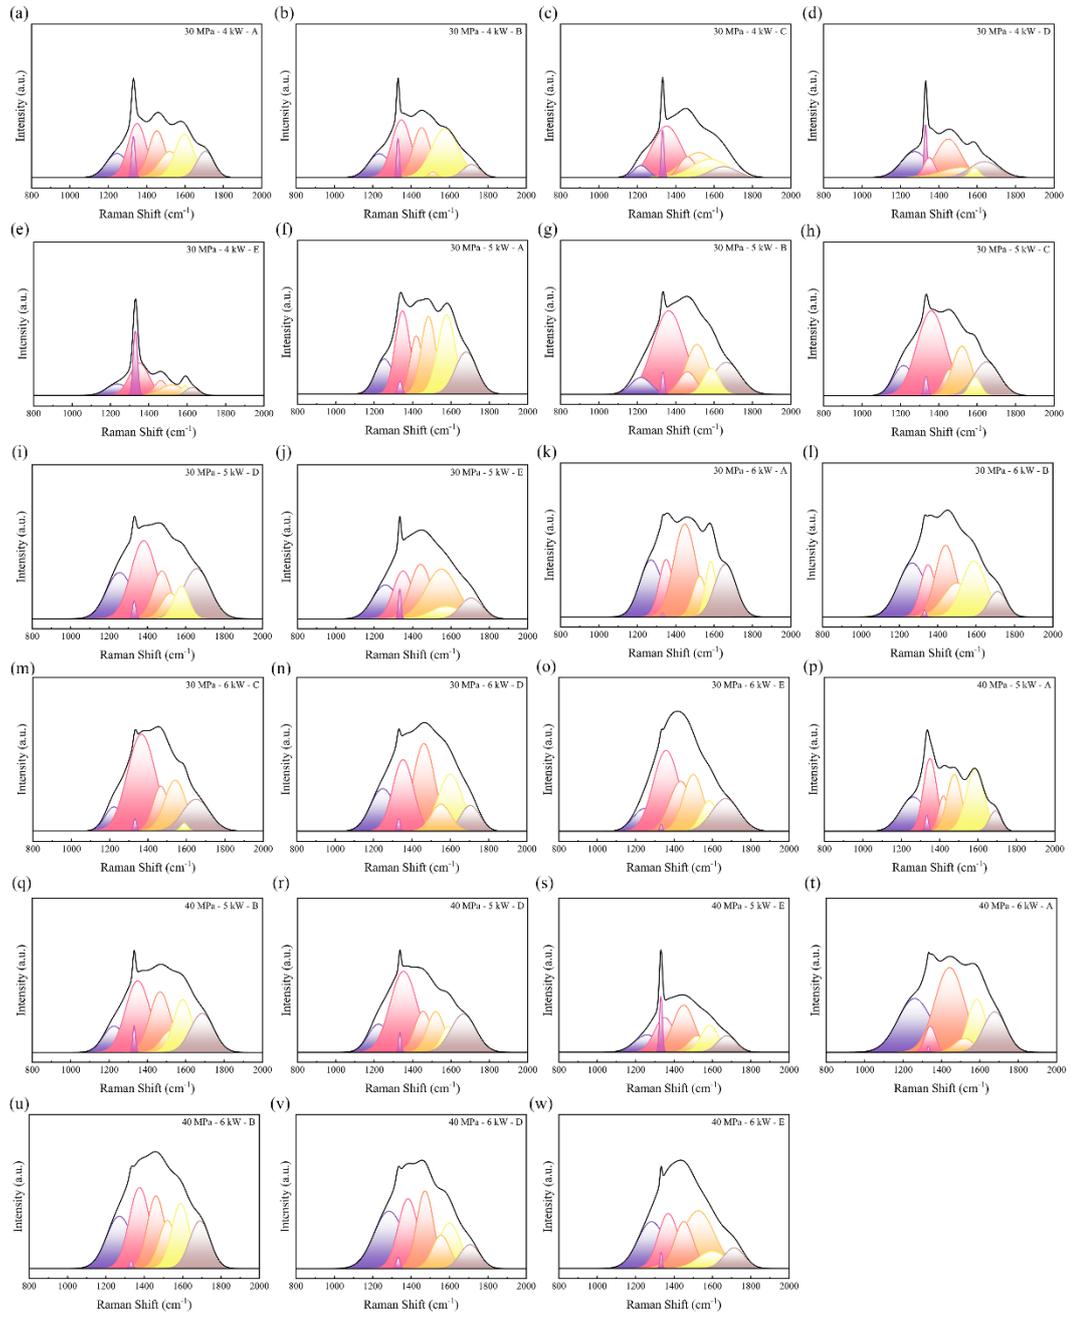

Figure S3. Figure S3 (a), (b), (c), (d), (e) are the Raman spectra of hot-pressed samples of 30 MPa - 5 kW, 30 MPa - 6 kW, 40 MPa - 4 kW, 40 MPa - 5 kW, 40 MPa - 6 kW, respectively. Figure S5 (f), (g), (h), (i), (j) (k), (l), (m), (n) are the Raman spectra of hot-pressed samples of 30 MPa - A, 30 MPa - B, 30 MPa - D, 30 MPa - E, 40 MPa - A, 40 MPa - B, 40 MPa - C, 40 MPa - D, 40 MPa - E, respectively.

**Figure S3.** Raman spectra of each hot-pressed diamond samples

Fitted Raman image were shown in Figure S4. Figure S4 (a), (b), (c), (d) and (e) represent hot-pressed samples of components A, B, C, D, E from 30 MPa to 4 kW, respectively. Figure S6 (f), (g), (h), (i) and (j) represent hot-pressed samples of components A, B, C, D, E from 30 MPa to 5 kW, respectively. Figure S4 (k), (l), (m), (n) and (o) represent hot-pressed samples of components A, B, C, D, E from 30 MPa to 6 kW, respectively. Figure S6 (p), (q), (r) and (s) represent hot-pressed samples of components A, B, D, E from 40 MPa to 5 kW, respectively. Figure S4 (t), (u), (v) and (w) represent hot-pressed samples of components A, B, D, E from 40 MPa to 6 kW,

respectively.

**Figure S4.** Fitted Raman of each hot-pressed diamond samples
